3

+ Button

1. Icon (Optional)

2. Text Label

3. Container

Element Patterns and Types

Flexible	Fixed	Flexible	
Element Pattern	Icon + Text	Text Only	Icon Only
Type	Contained	Outlined	Ghost

Overlays

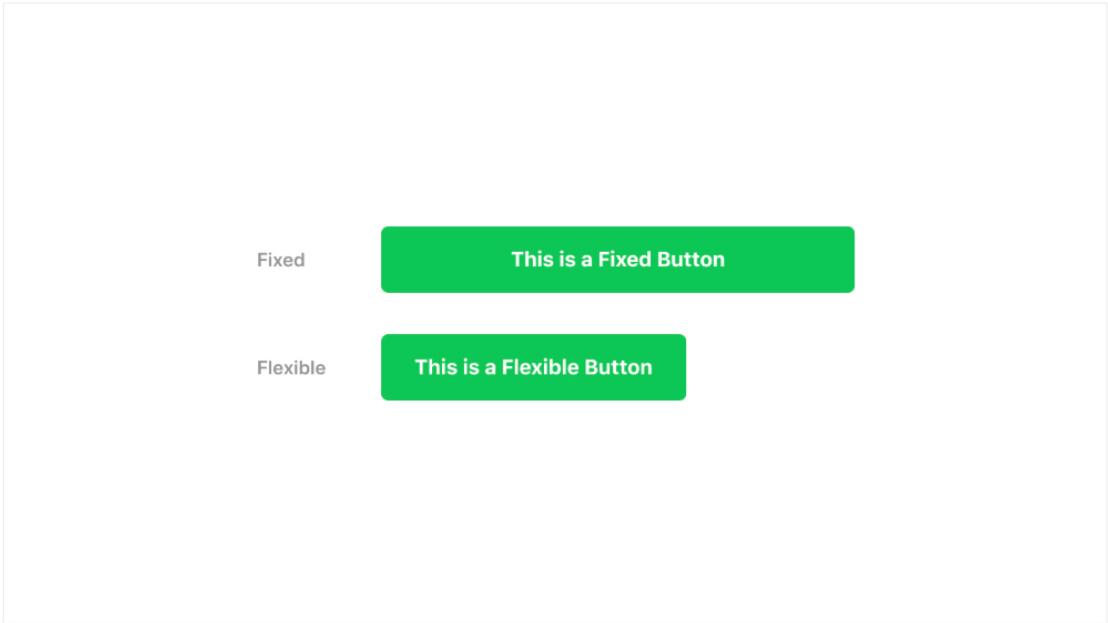

- Popup
- Snackbar
- Toast Overlay
- Tooltip
- Bottom Sheet
- Pulldown Menu

Systems

- LIFF View

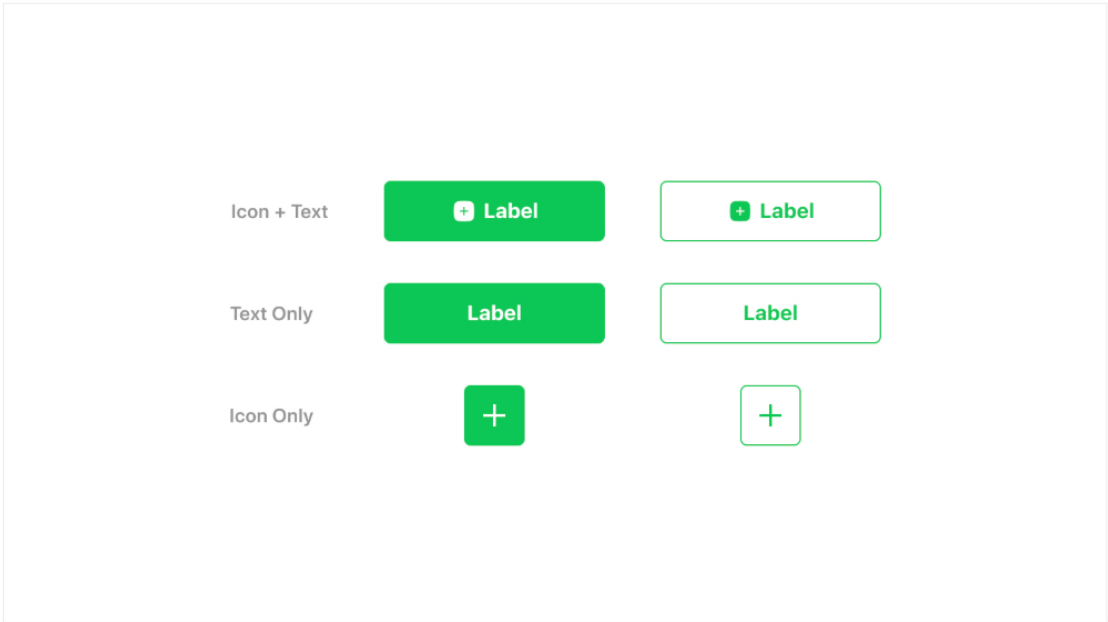

States	Enabled	Disabled			
Size	XL	L	M	S	XS

Flexible

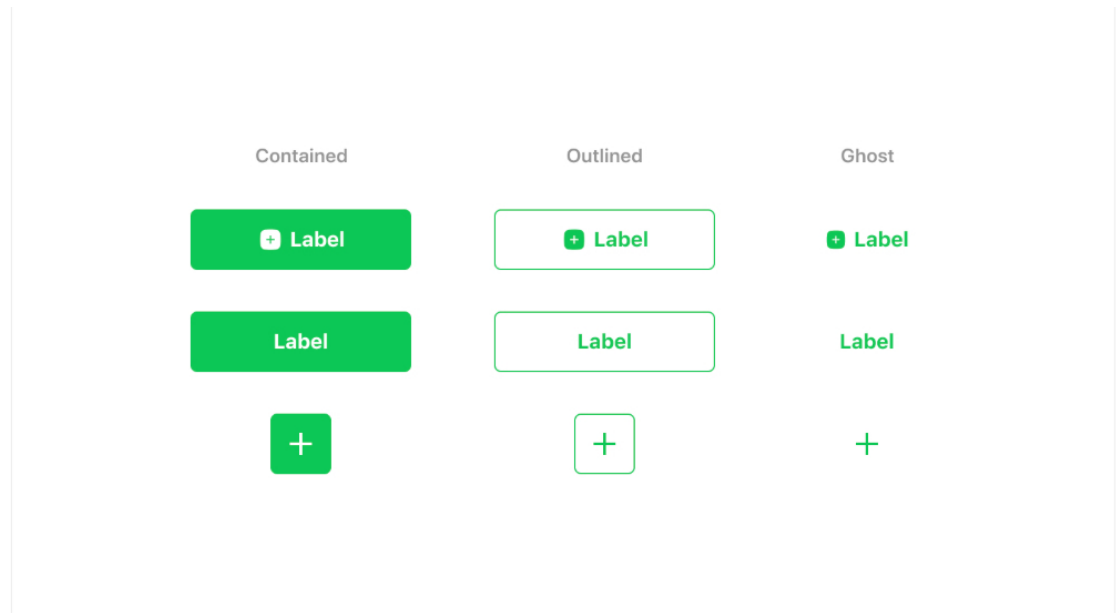

- Fixed buttons do not have fixed padding values on the sides and the widths can be freely adjusted.
- Flexible buttons have fixed padding values on the sides and the widths are adjusted according to the number of characters. Do not adjust the widths when using them.

Element Pattern

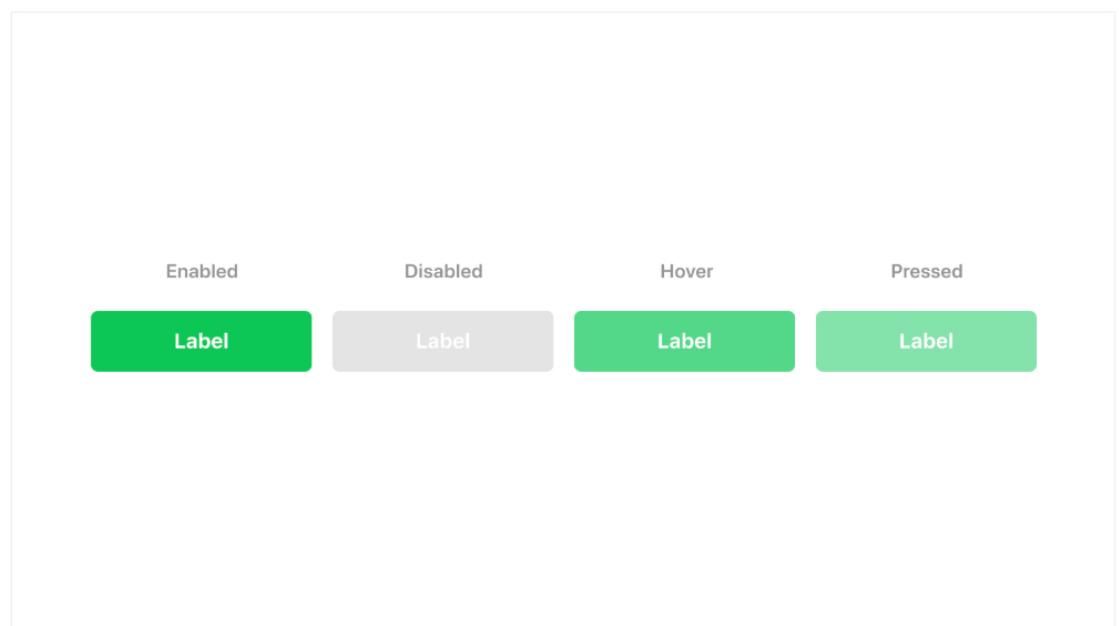

Three patterns are provided depending on the presence of icons: Icon + Text, Text Only, and Icon Only The Icon + Text pattern is easier to recognize than other patterns.

Type

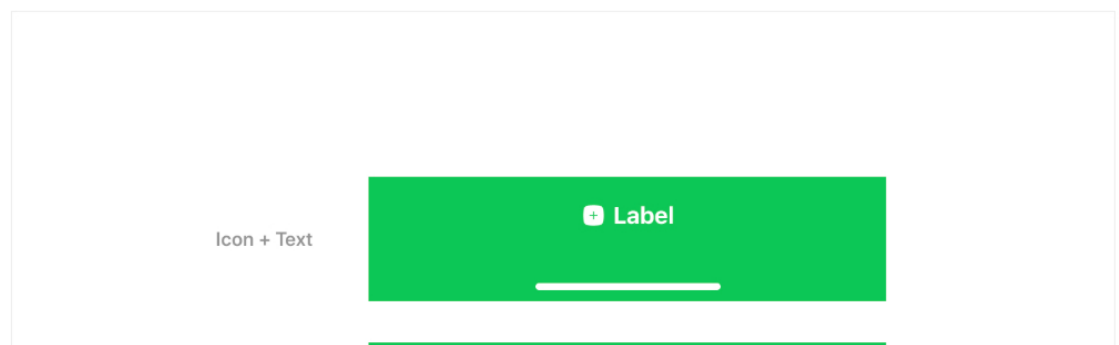

The Contained, Outlined, and Ghost types are provided according to the container properties. Ghost buttons have areas just like those of the fixed buttons or flexible buttons, even if they do not have containers.

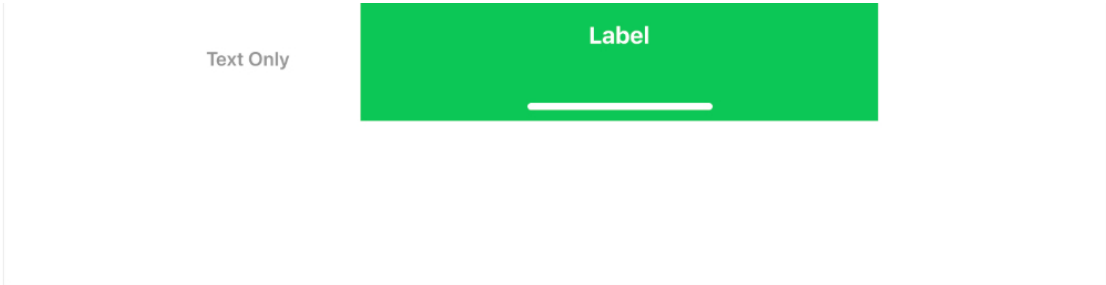

States

Four states are provided by default. The Hover state is used for PC web only. The Disabled state uses the disabled state color (\$ldsg-color-disabled-gray, #E4E4E4) regardless of the enabled state color.

Full-Bleed Button

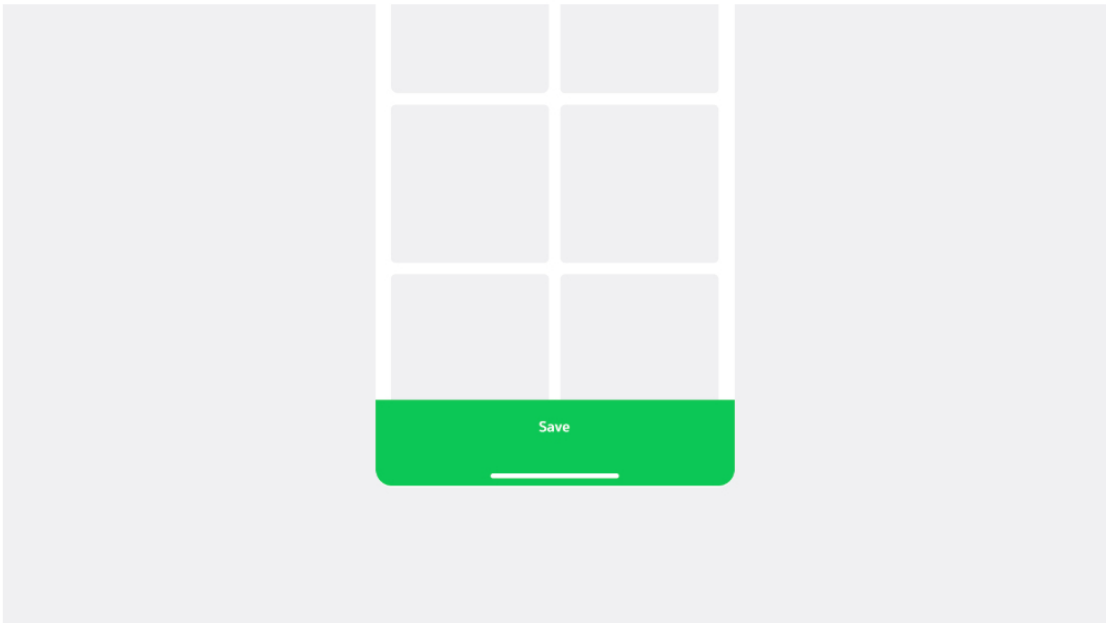

Full-bleed buttons use 100% of the widths. Contained buttons without radiuses are used.
Use this option when designing a screen for devices that have the Home indicator (375x812 or larger).

Option Name	Options		Description
iPhone Home Button	True	False	Use this option to design iOS device screens larger than those of the iPhone X.
Icon	True	False	You can select whether to use an icon.

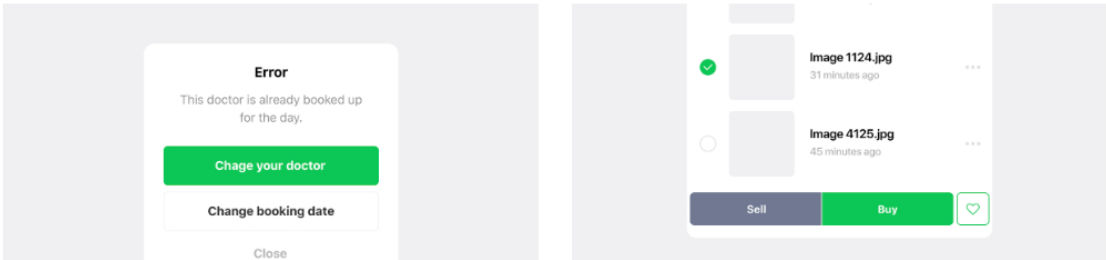

Usage

Full-Bleed Button

When a full-bleed button is used, it is fixed at the bottom and it does not scroll.
Also, the same color used for the button is used for the Home indicator.

Multiple Buttons

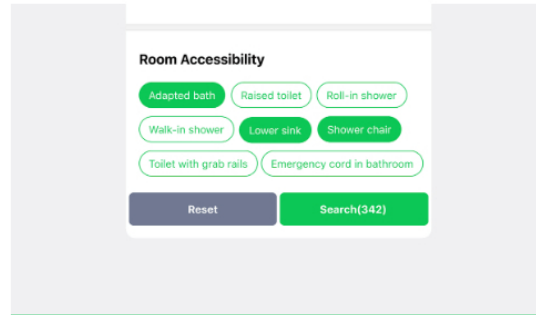

Do

Buttons can be vertically aligned.
In a pop-up message, the top button has the highest priority and the priority decreases as the button position goes down.

Caution

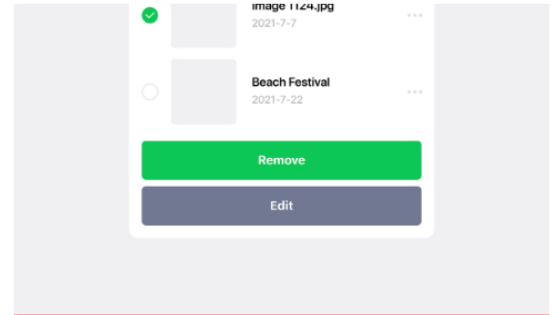

Be careful when using three or more buttons in a row.

Priority

Do

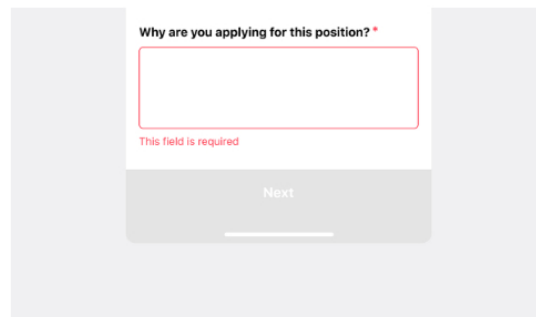

When placing buttons side-by-side, place the button with more importance in the task on the right.

Don't

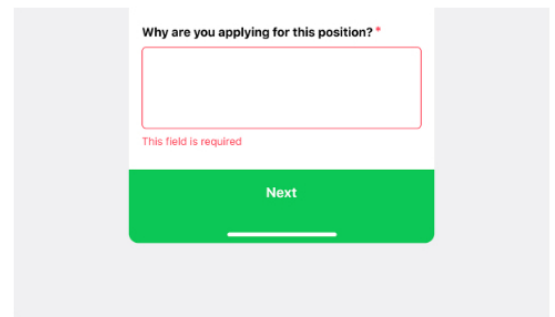

On a full screen, do not place a button with higher priority at the bottom.

States

Do

The button must stay disabled if the required user's tasks, such as user inputs, are incomplete.

Don't

Do not keep the button enabled if the required user tasks are incomplete.

Customization

Background Color

- Users can change the color within the foundation colors provided by the LINE Design System for Global Family Service (LDSG).

Radius

- Select one from 3, 5, or 7.

Typography

- Users can change the font within the LDSG Typography.
- It is recommended not to change the font size.
- Users can change the color within the foundation colors provided by the LDSG.

- Select one of the LAICON icons.

Icon

- Users can change the color within the foundation colors provided by the LDSG.
