Badge

A badge is a component used for providing information on new updates and notifications.

Because a badge indicates the status of menus or features within LINE Chat and services starting from the top of the screen, it can effectively alert users about updates since the features that display a badge are distinctive from other features.

Anatomy

1. Letter, Number

New badge: Shows the English letter "N," which stands for "New."

Number badge: Shows a number that increases by 1 at a time based on the update status.

2. Background area

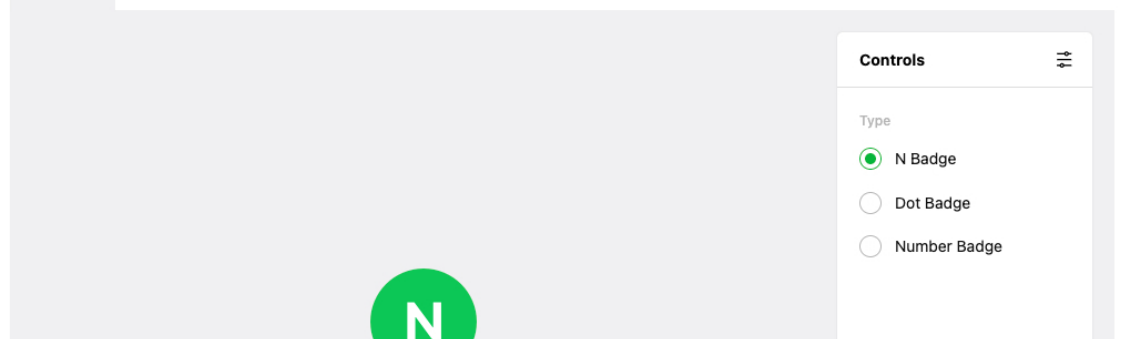

The background container area of a badge.

It is a circular shape by default, and the shape of the length can be modified to become wider depending on the number of digits only for number badges.

Types

Badges can be classified into three types in the following manner.

Common

New badge

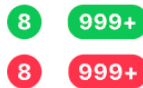

Used when a new feature or service has been released because it can display a notification most actively among the badges. It has a letter "N" inside a circular badge.

Dot badge

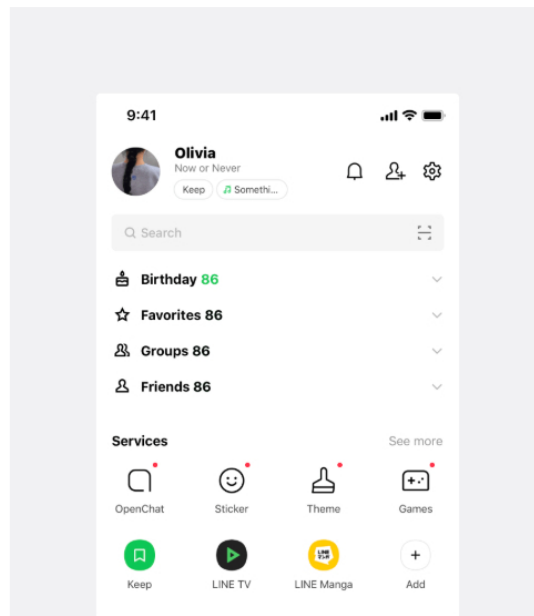

Used when there is an update for an existing menu or service. A dot is displayed near an icon or a text button. Green or red badges may be applied depending on the displayed location.

Number badge

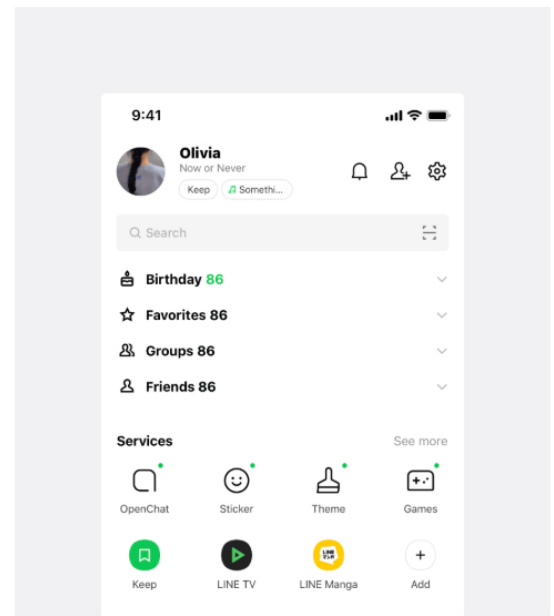

Used for the features that can count the new updates. A number from 1 to 999 can be displayed inside a circular badge, and "999+" is displayed if the number exceeds 999. The shape of the badge container width is modified automatically according to the length of the number. Green or red badges may be applied depending on the displayed location.

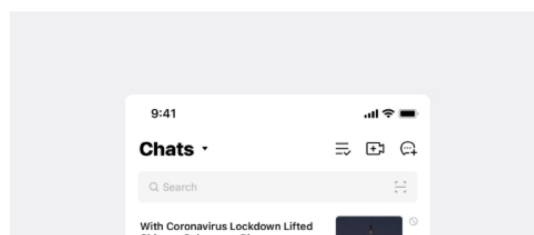

Don't

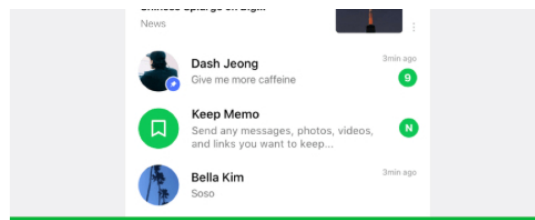

A red badge may not be applied on areas other than the GNB. Be sure to follow the color rules because this is to establish consistency within LINE Messenger.

Do

Use a red badge in the GNB and use a green badge in other areas.

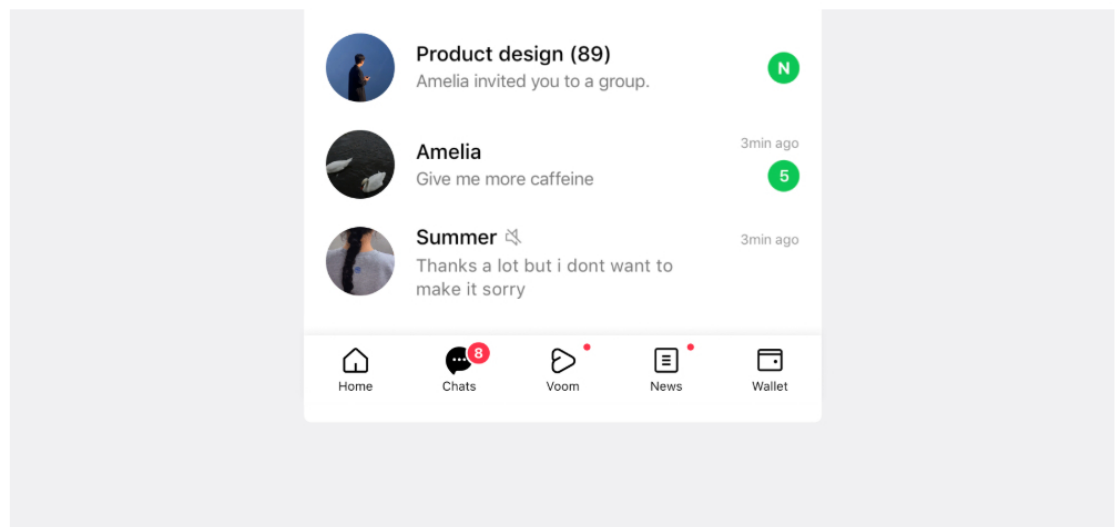

Do

You can distinguish new update items from existing update items using a new badge if a new feature, service, or chat that is not an update of an existing one has been added.

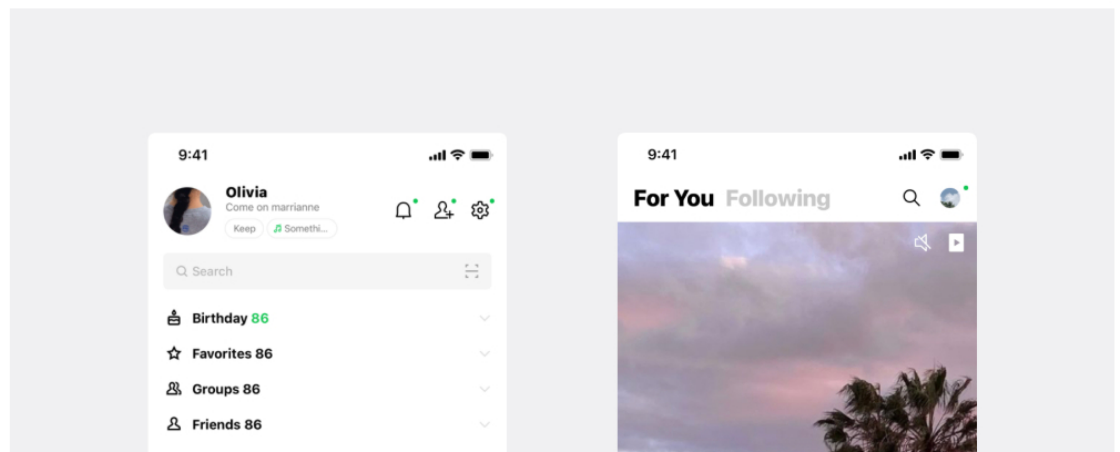

Usage

Bottom navigation

- Display dot badge and number badge if there is an update on each tab at the bottom navigation.
- Use a red badge so that GNB can be separated from other areas.

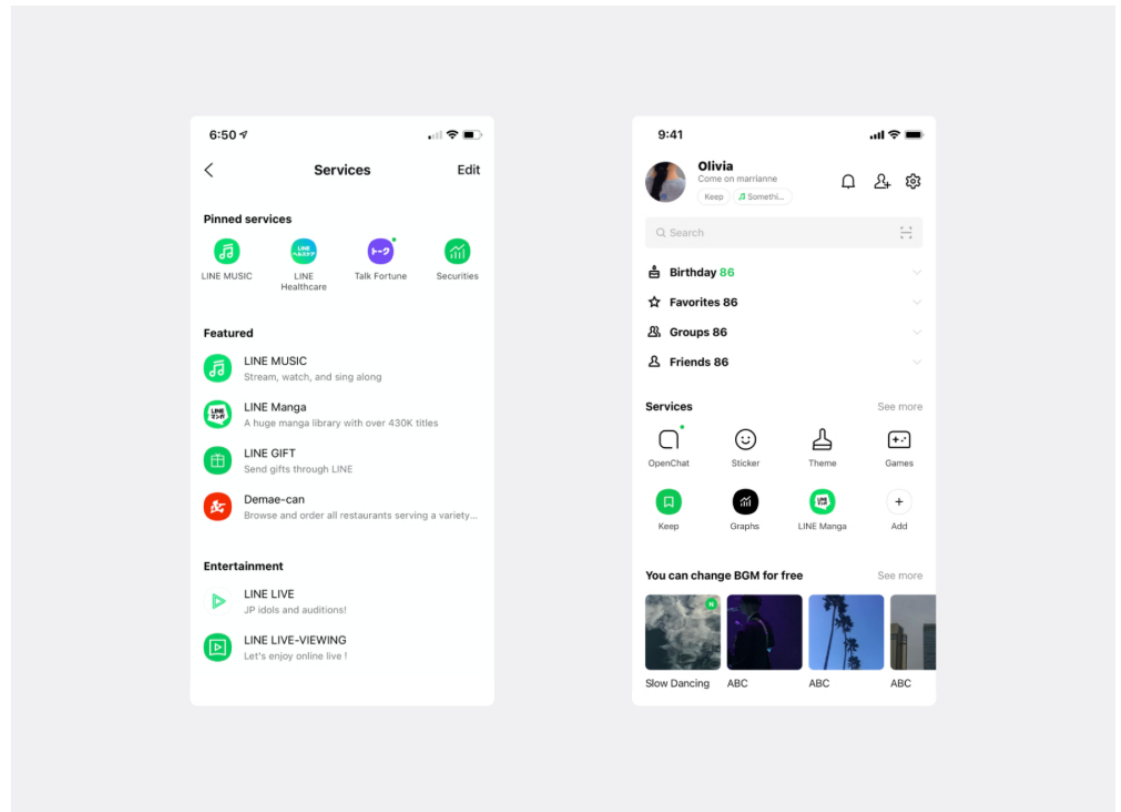

Top navigation

If there is an update on a feature located at the top navigation, display the update using a dot badge or a number badge.

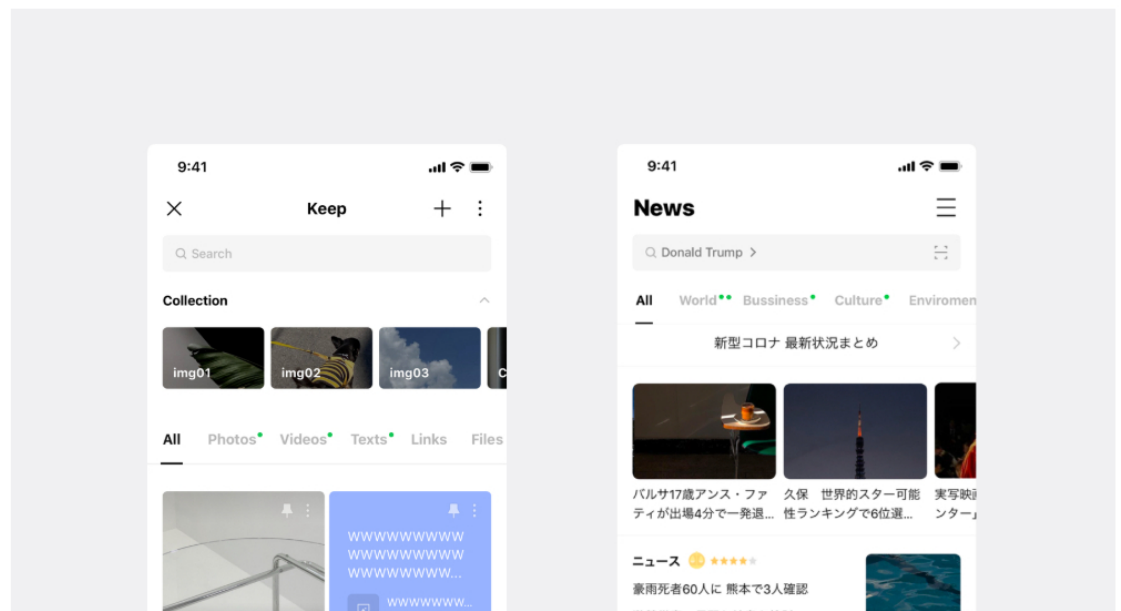

Content area

Content area

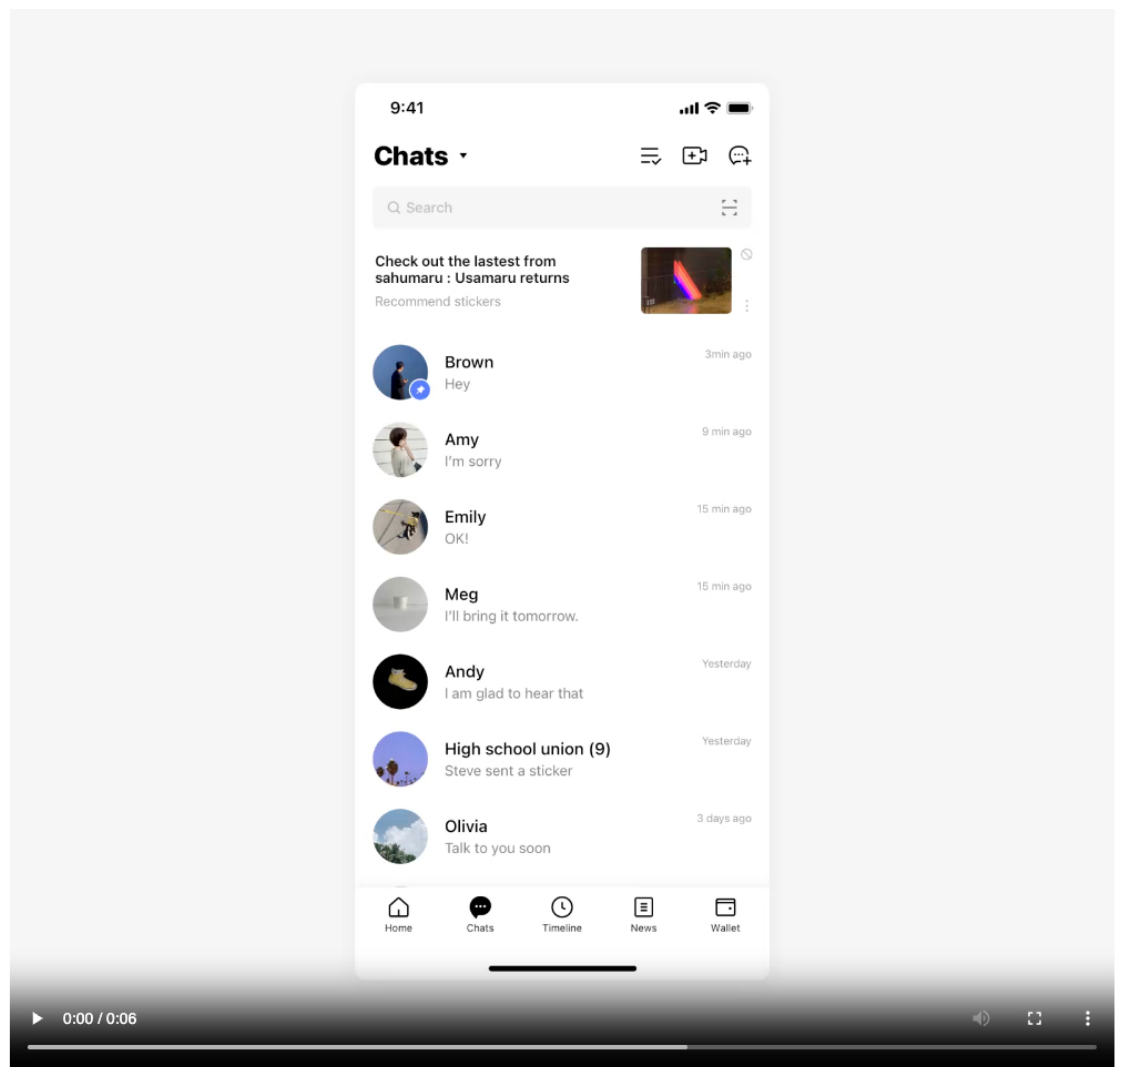

- If there is an update on a feature located at the screen content area, display a dot badge or a number badge.
- Display a dot badge if an existing service has been updated, and display a new badge if a new service has been added.

Tab

Expose a dot badge in the relevant tab if there is a content update in the tab.

Actions

When/How badge is exposed

Displayed immediately when there is an update
 A chat arrives
 A chat room is created
 A service update is released

When/How badge is dismissed

When a user has selected a button where a badge is displayed
 When a user has selected a chat or a chat room where a badge is displayed
 Can disappear automatically all at once after the time set in the service.
 For a new badge, detailed conditions may be added to the period to maintain the badge of each service. In such cases, specifications can be determined on each service.
