Card

A card is a component which includes the content and actions of a single item.

Anatomy

1. Image area

Provide an image related to the item.

2. Text area

Display the title and the content of an item using text and other elements.

3. Indicators area (Optional)

The chip content is displayed as text, and an auxiliary icon, etc. can be selectively displayed together.

4. Action area (Optional)

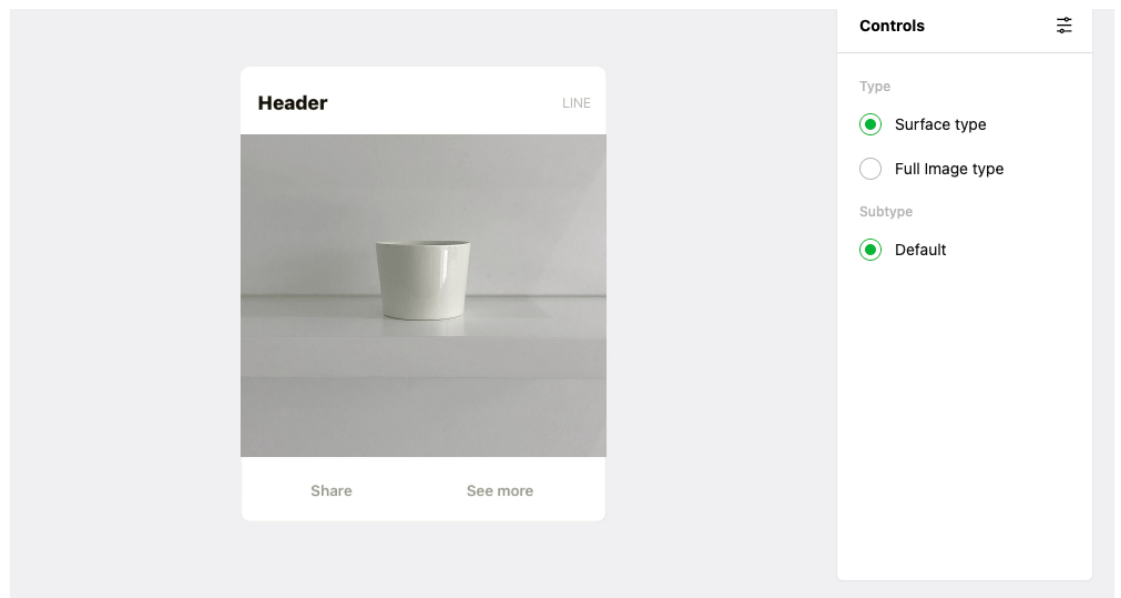

You can include actions, such as a link or a button, related to the item.

Types

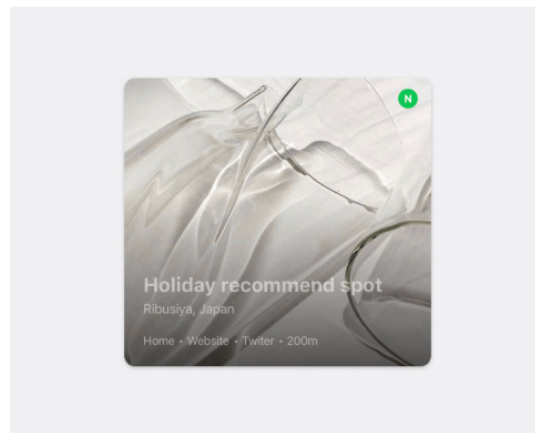

Types are classified into the surface type, where the image and text areas are split in the area within the card, and the full image type, in which the image is placed at the front side. The full image type can be divided into the outer text where the text area is located at the bottom of the image, and the inner text where the text area is located inside the image area.

Light

Dark

- The surface type is in the form of split image and text areas inside the card, and the text areas are located at the top and bottom of the image. It can be customized freely inside the sheet except for the size and the margin. As shown by the usability of LINE Search and Flex Message, it can be combined with components, such as List, Profile, and Button.
- The full image type is in the form of placing the image inside the card in the front side, and the text area can be located at the bottom of the image or inside the image area.
(Outer text - the text area is located at the bottom of the image, Inner text - text area is located inside the image area by applying the gradation dim effect)

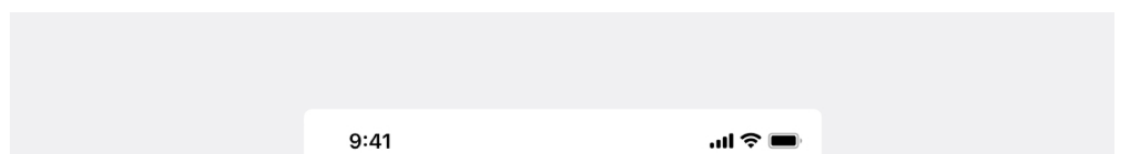

Don't

You must consider the readability of text if the text area is located inside the image area.

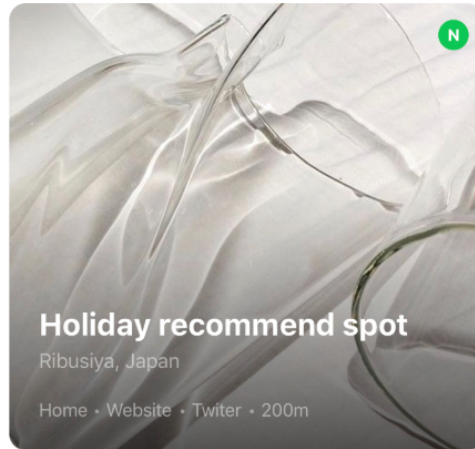

Actions

You can apply the primary action where the entire card area operates as one action area, or add the supplemental action to execute an additional action using an icon or text.

Primary action

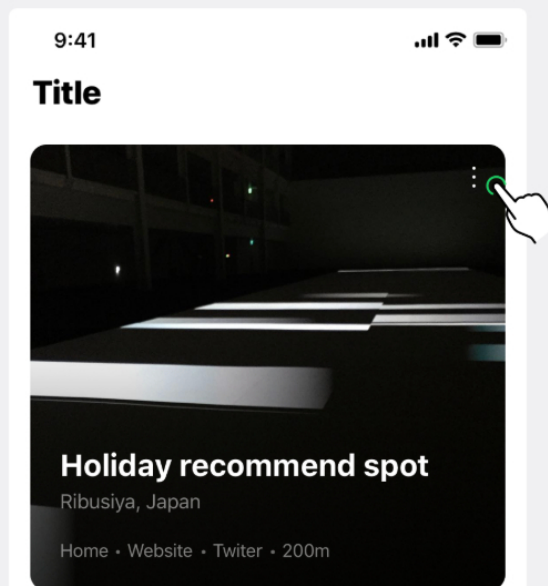

Title

- Normally, the entire card area operates as one action area.
- If the card is tapped, the screen is redirected to the detailed page related to the card content.

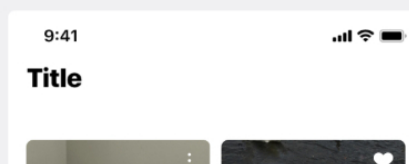

Supplemental action

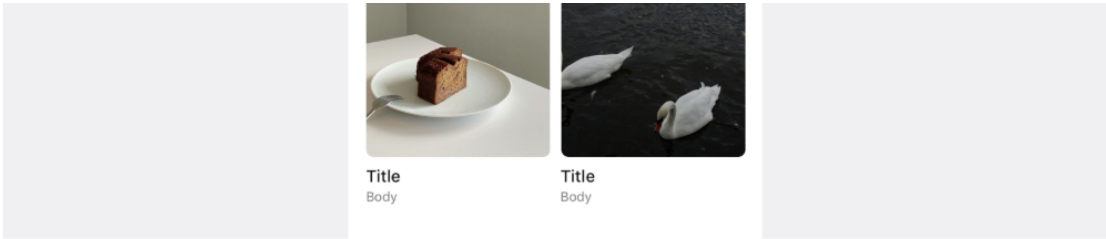

- It is possible to execute or set up an additional action by providing an icon or text.
- The action is performed in a state where it remains on the relevant page without redirecting to the detailed page.

Action placement

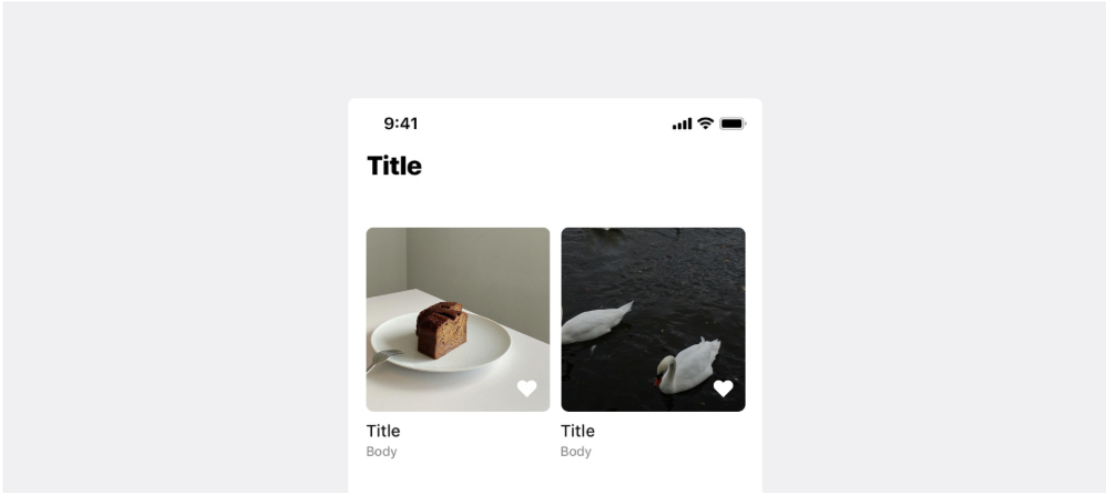

An action can be placed on the right or the bottom of the card. The action types that can be provided in each area are different.

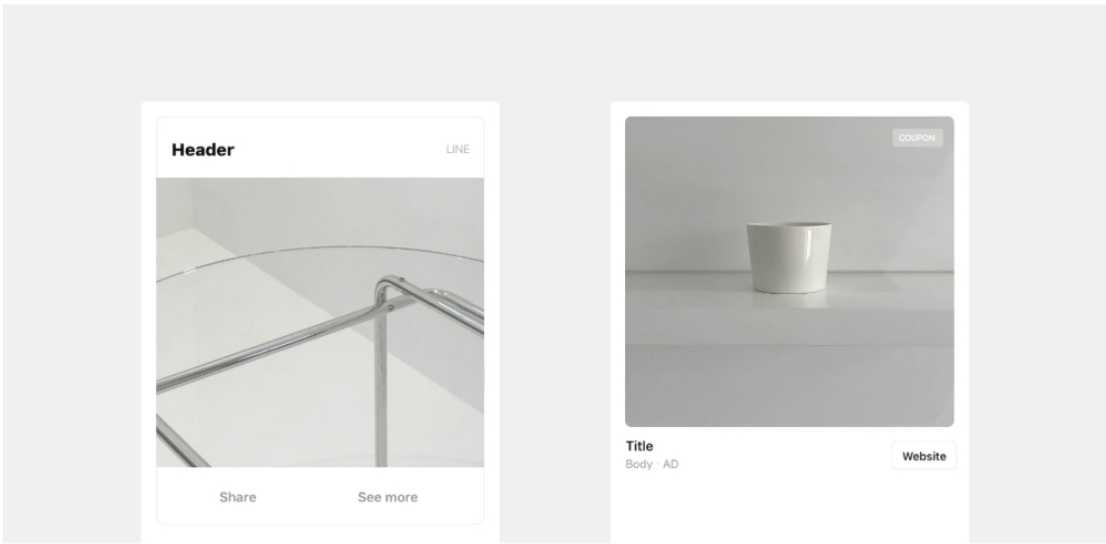

Icon button An additional action is performed by using an icon button.
(e.g., bottom sheet and dropdown menu actions are provided in the More button)

Toggle button An additional action is performed by using a toggle button.
(E.g., a fixed action at the top using a heart icon)

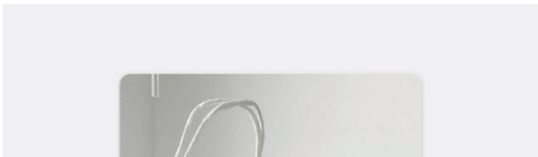

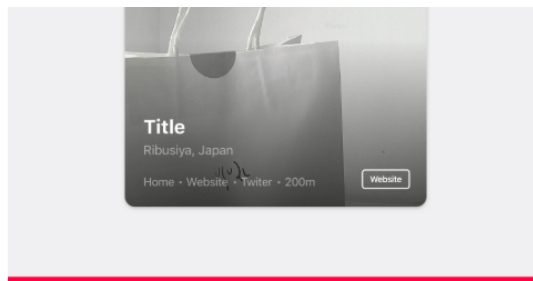

An additional action is performed by using a toggle button.
(E.g., a fixed action at the top using a heart icon)

Text button An additional action is performed by using a text button.
(E.g., sharing module action using a Share button)

Outlined button An additional action is performed by using a text button.
(E.g., providing an additional related link of the item using a button)

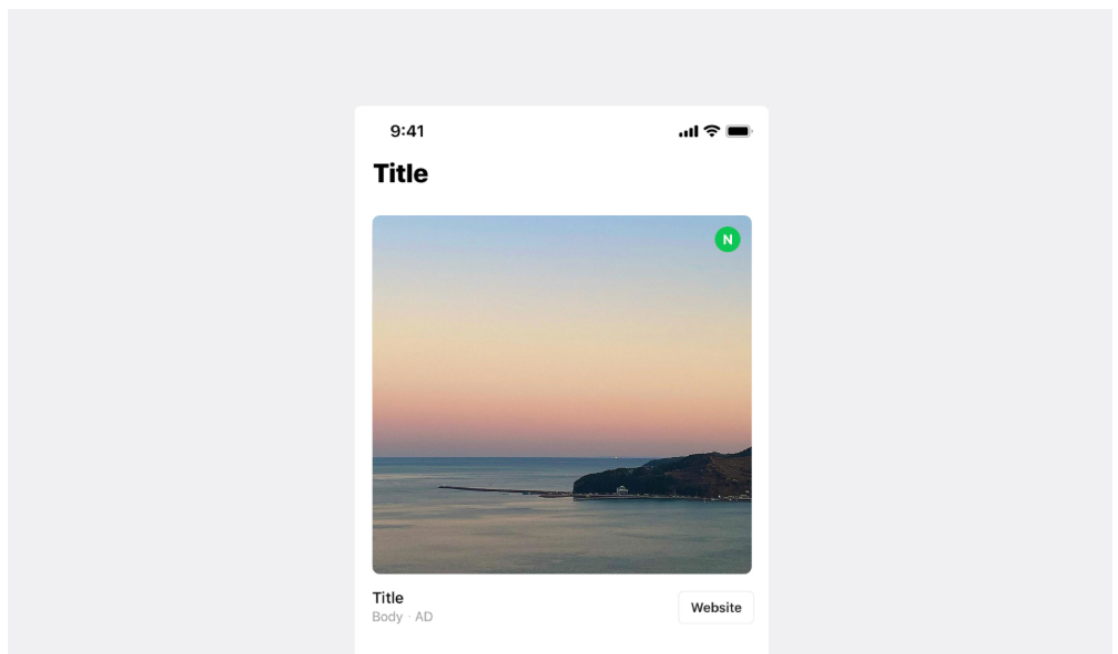

Don't

You cannot use the text button or the outlined button for inner text where the text area is placed above the image in the full image type.

Indicators

You can provide information related to the card content by displaying an indicator inside the card. It is possible to display the media attributes or duration inside the card starting from the role of increasing the attention level on the card like New badge.

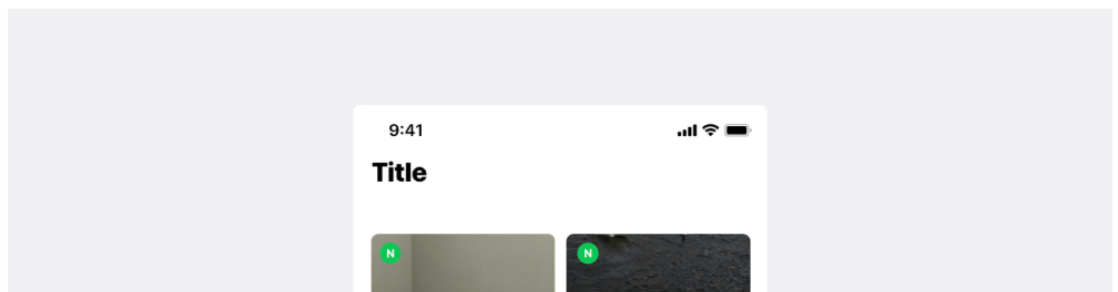

Indicator(non-action)

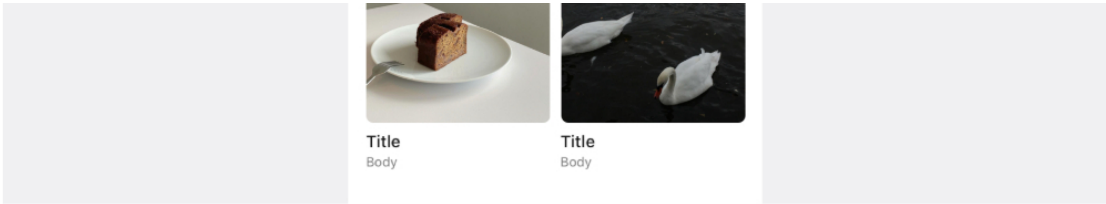

- You can provide information related to the card content by displaying an indicator inside the card.
- It operates the same way as tapping the remaining area of the card without having a specific action.

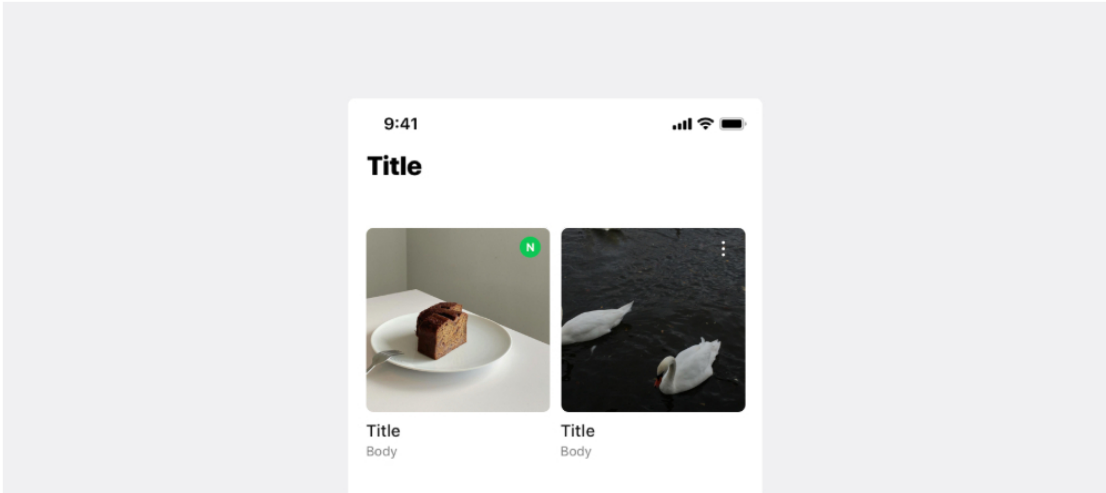

Indicator placement

Indicators can be located at all four corners of the card.

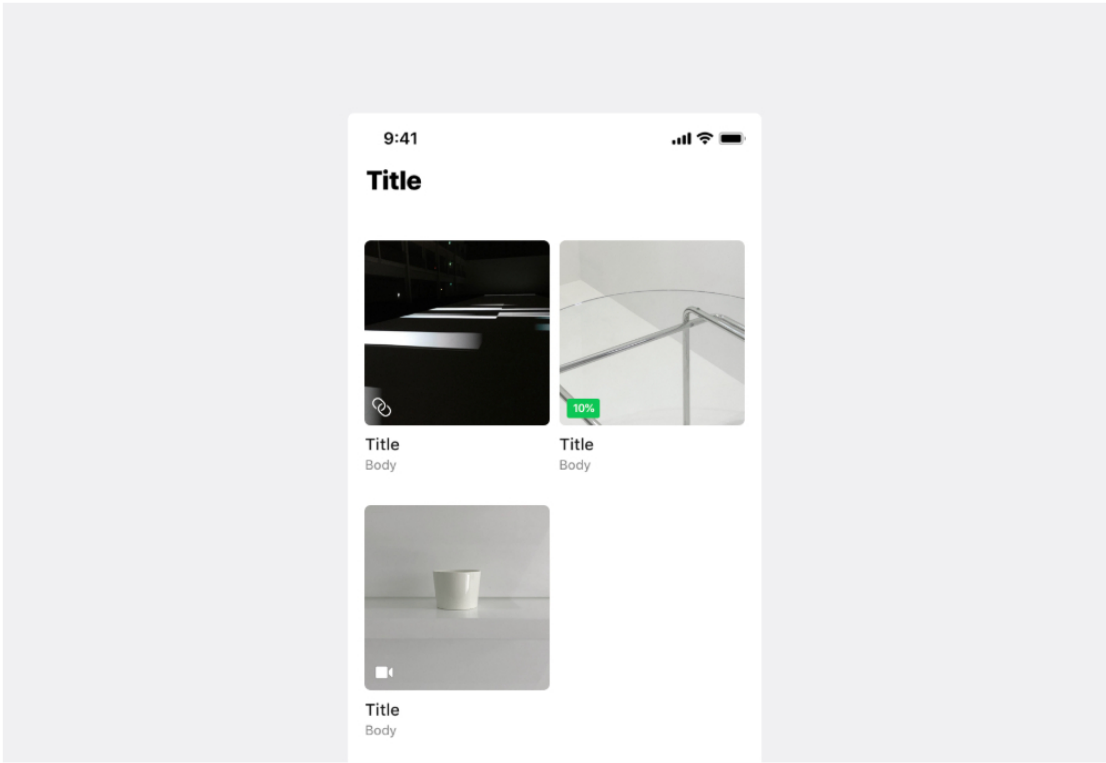

Increase the attention level by providing the information related to the card content using the badge component.

Badge Increase the attention level by providing the information related to the card content using the badge component.

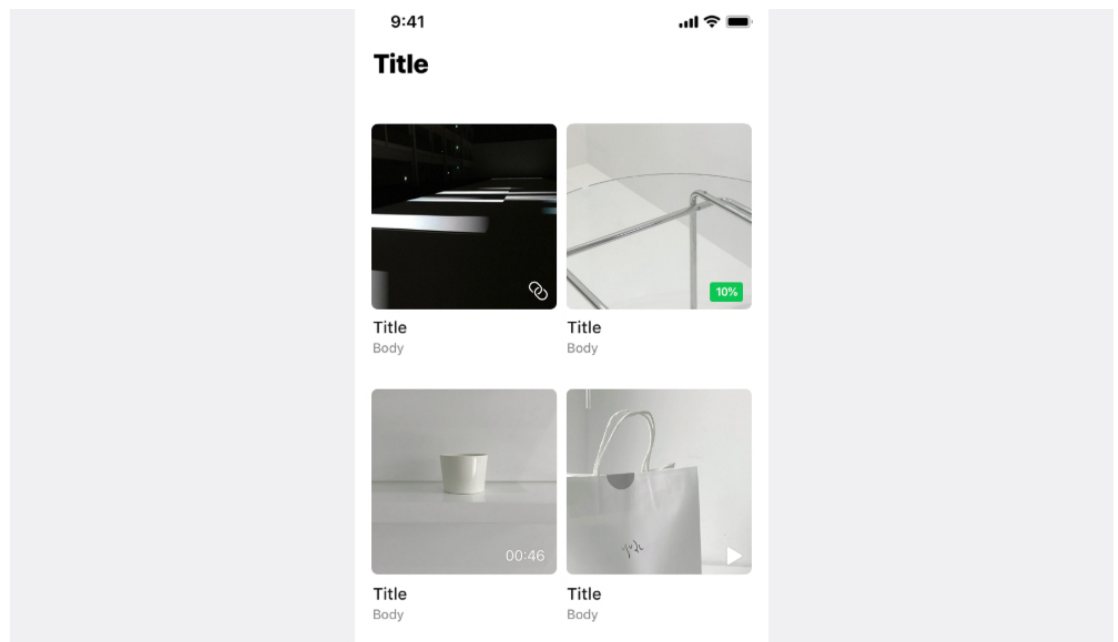

icon You can provide an icon for the additional information of the card item.

Link icon Increase the attention level by providing the information related to the card content using the badge component.

Price text You can provide the discount rate and price information in the form of a badge for product-related cards.

Media type icon Provide the related information by using an icon if the card content is a specific media type, like a video GIF.

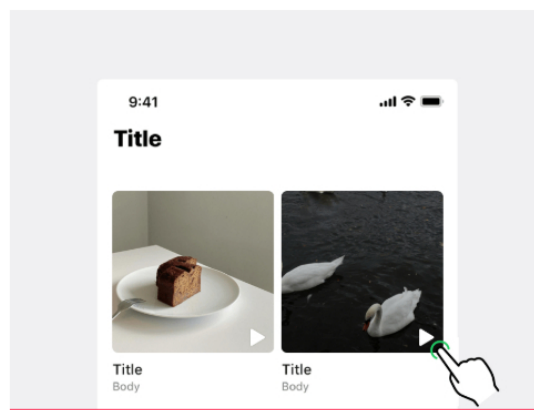

Link icon Increase the attention level by providing the information related to the card content using the badge component.

Price text You can provide the discount rate and price information in the form of a badge for product-related cards.

Duration text You can display the video content length of the card.

Media type icon You can provide the media type information, such as playing or changing content, according to the card content.

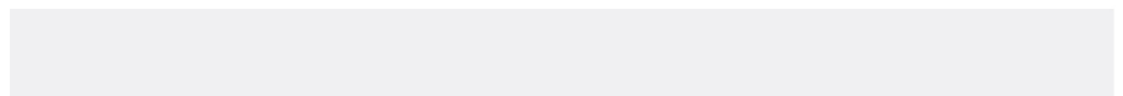

Don't

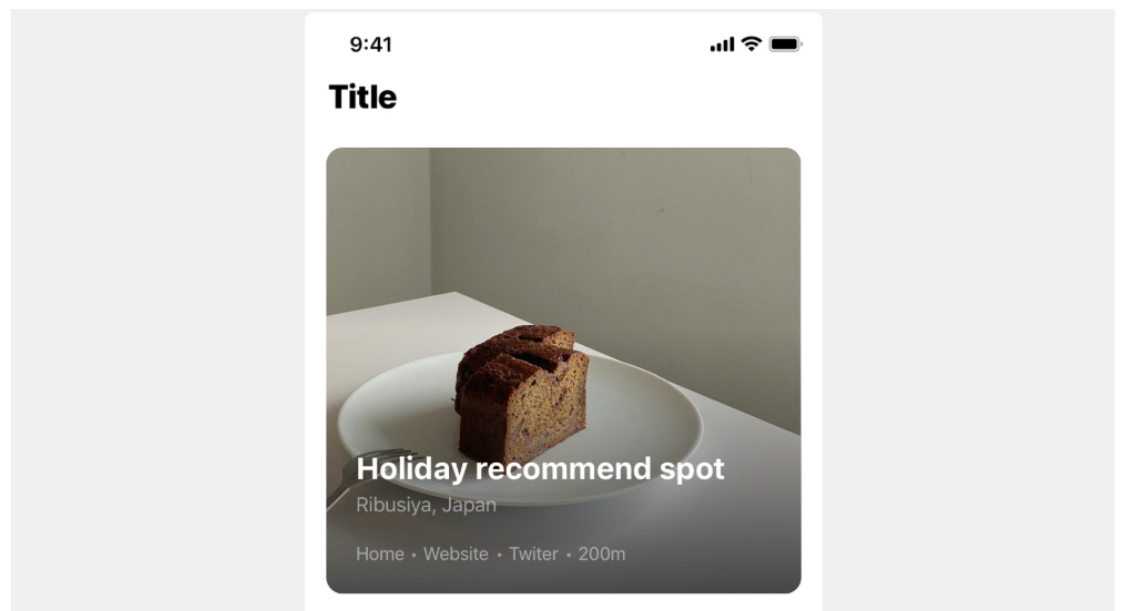

Although an indicator can display the card status, users cannot select the area to perform an action.

Placement

You can place it as a single type to place one card on the screen or place it as a collection type to place many cards on the screen. Collections may be placed horizontally or vertically.

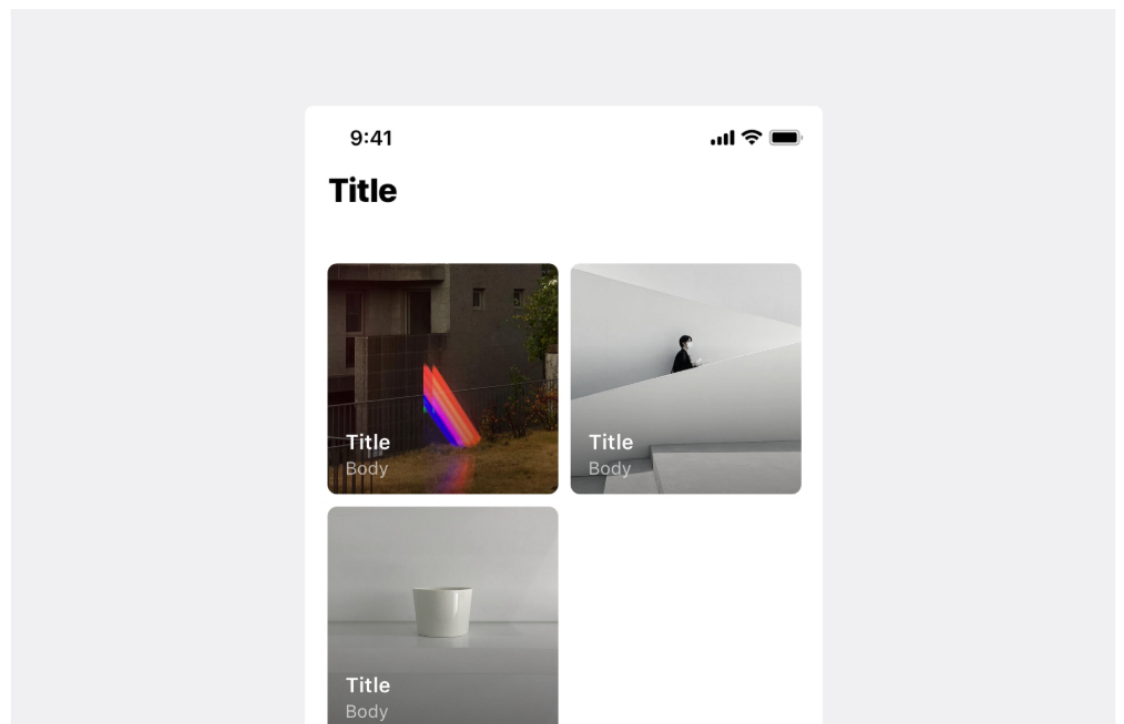

Single

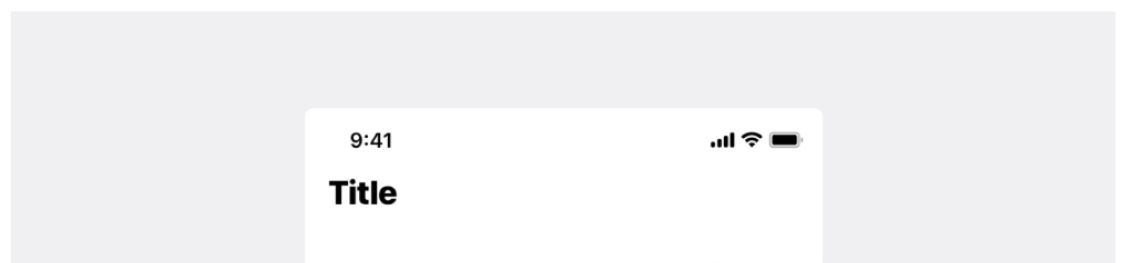

You can place one card on the screen.

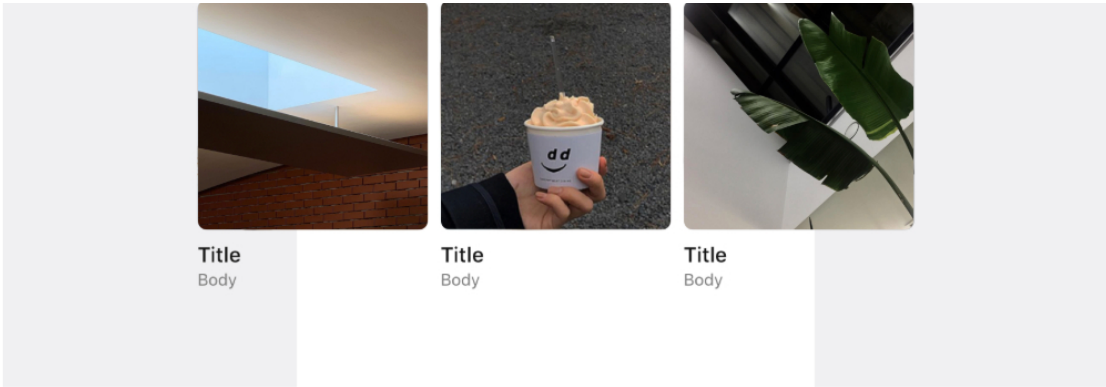

Collection - Vertical

- Align the cards as top → down.
- Search is possible using scroll.

Collection - Horizontal

- Align the cards as left → right.
- Search is possible using swipe.
