Delete

The delete action eradicates an existing object.

Generally, after deleting data, it is difficult to restore it to the previous state, so it is recommended to inform the user of this fact and ask them to confirm before proceeding with the delete action.

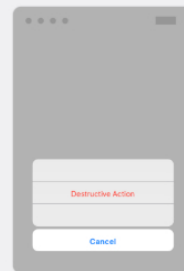

How to provide delete action?

Here's how to confirm the delete actions that are provided to users based on their importance and state.

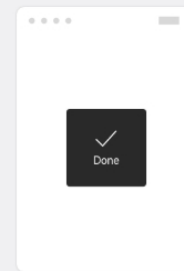

Dialog Popup

When it needs strong user attention

Action Sheet

When user needs to be aware of deleting contents

Toast Overlay

When it doesn't need user confirmation

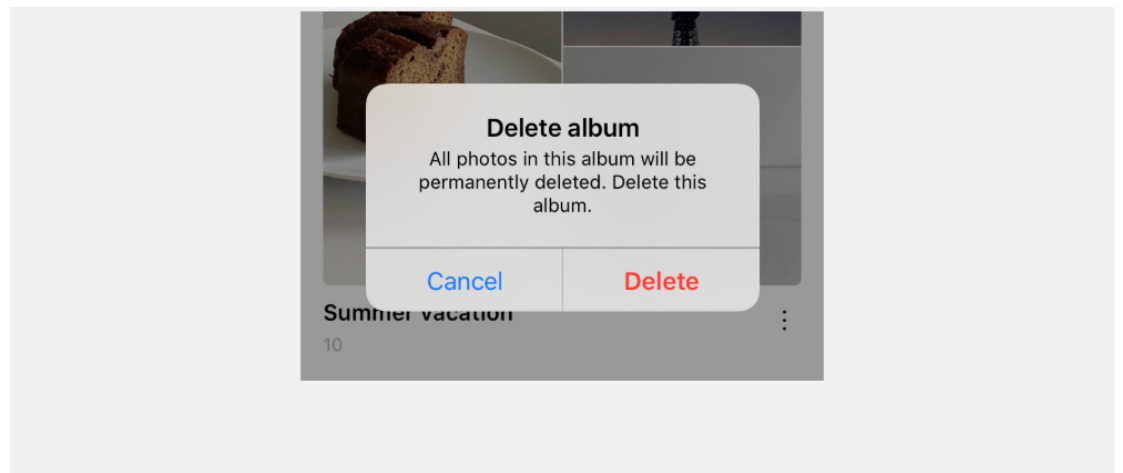

Dialog

For more information, please click here.

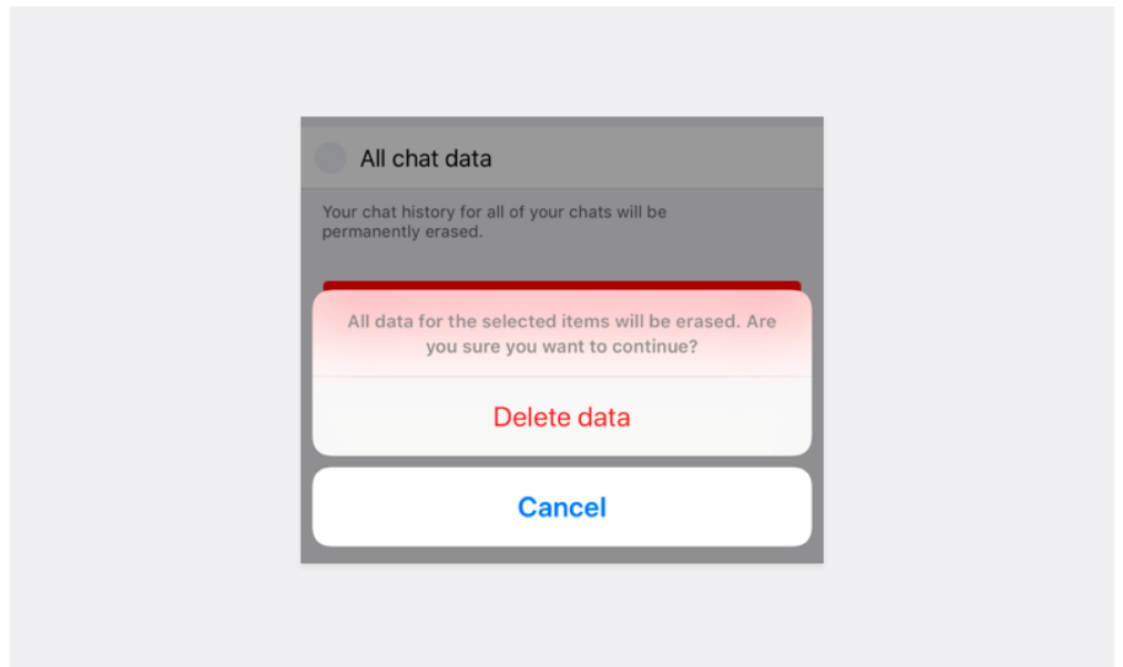

Dialogue popup

If the user deletes content that is of a high importance, we recommend that you ask for confirmation. Provide a 'System dialog popup' to provide a description of the content being deleted and a message stating that it can not be restored. The 'System dialog popup' is located at the center of the screen, which can draw user attention and communicate warning messages clearly.

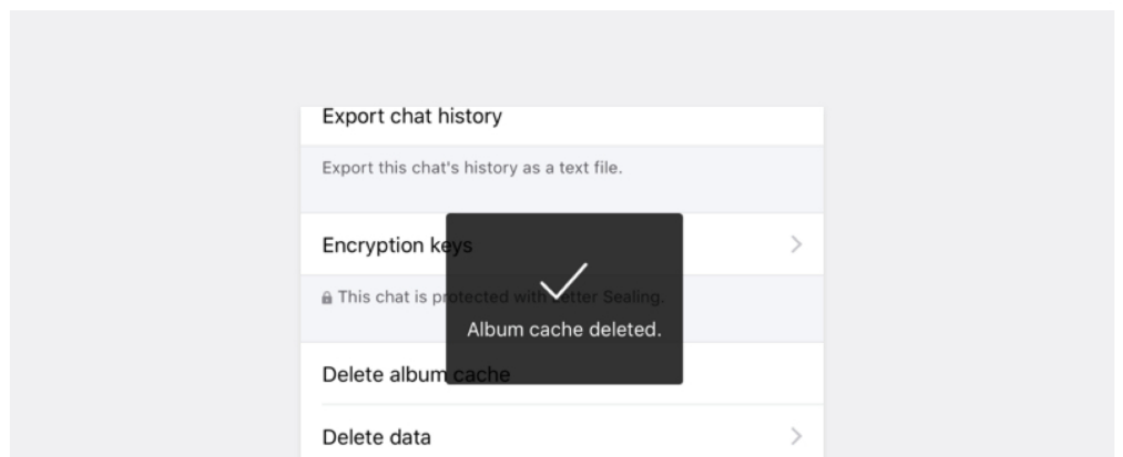

Action sheet

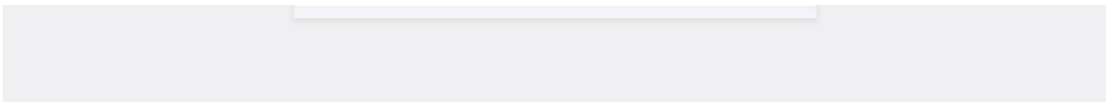

Provide an action sheet if the user needs to clearly identify the contents they are deleting on the screen. The action sheet is displayed at the bottom and does not cover the contents of the screen.

Toast overlay

Provides only feedback with the 'Toast overlay' on the delete action and should be used as confirmation when deleting the less important content.
