Flex Message

Empty

While using an app, if nothing is provided when the expected results are not shown, users may be confused. Content is provided to help users when the content of an item cannot be displayed.

Anatomy

1. Image area (Optional)

Used only for helping users understand their situation, such as a network error, refresh, and location.

2. Title area (Optional)

Describes the current situation as briefly as possible to ensure that users can quickly understand their situation.

3. Description area

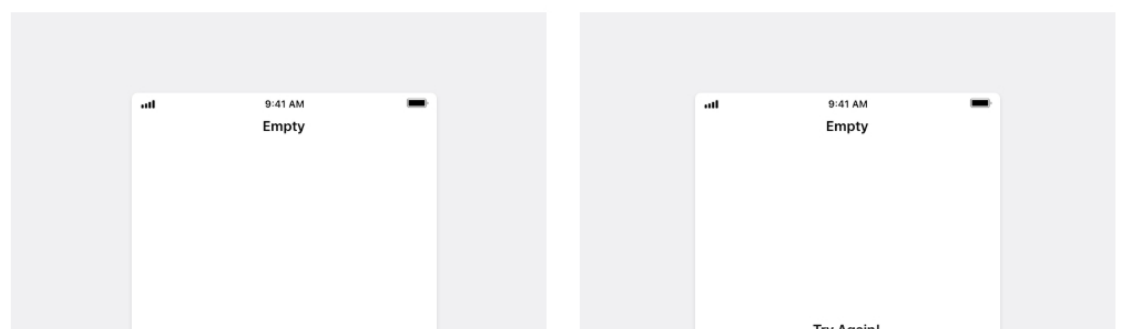

Briefly describe the expected behavior of the user.

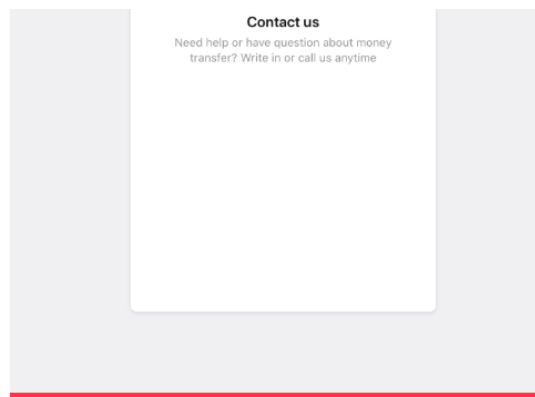

If the situation can be briefly described in one paragraph, omit the title and provide only the description.

4. Button area (Optional)

A button that prompts actions users can perform in an empty state may be provided.

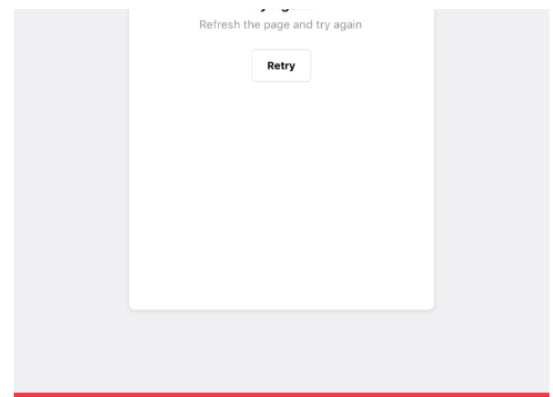

The use of one button is recommended to induce users to perform a single task, and up to two buttons may be used.

Don't

Refrain from using text such as Call to Action.

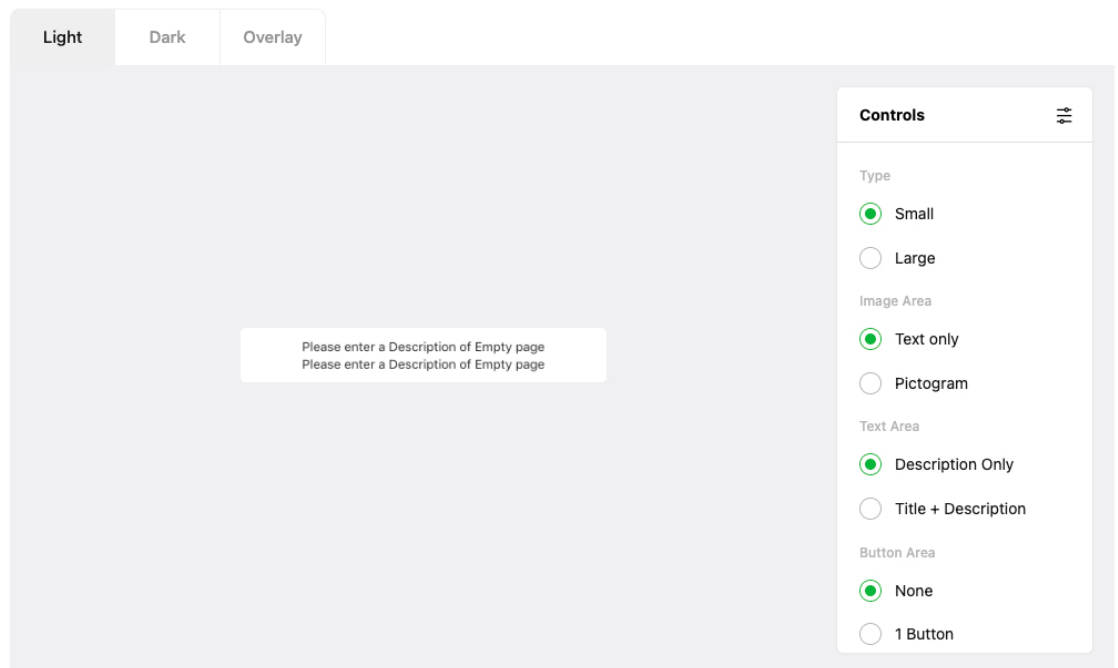

Don't

Refrain from using content that might cause urgency or confusion.

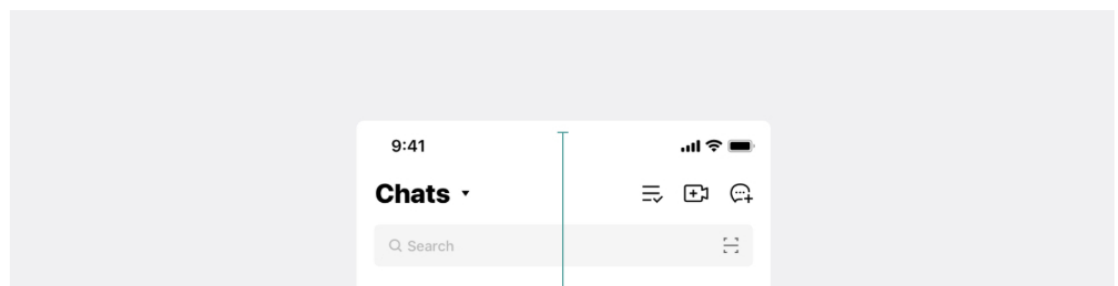

Types

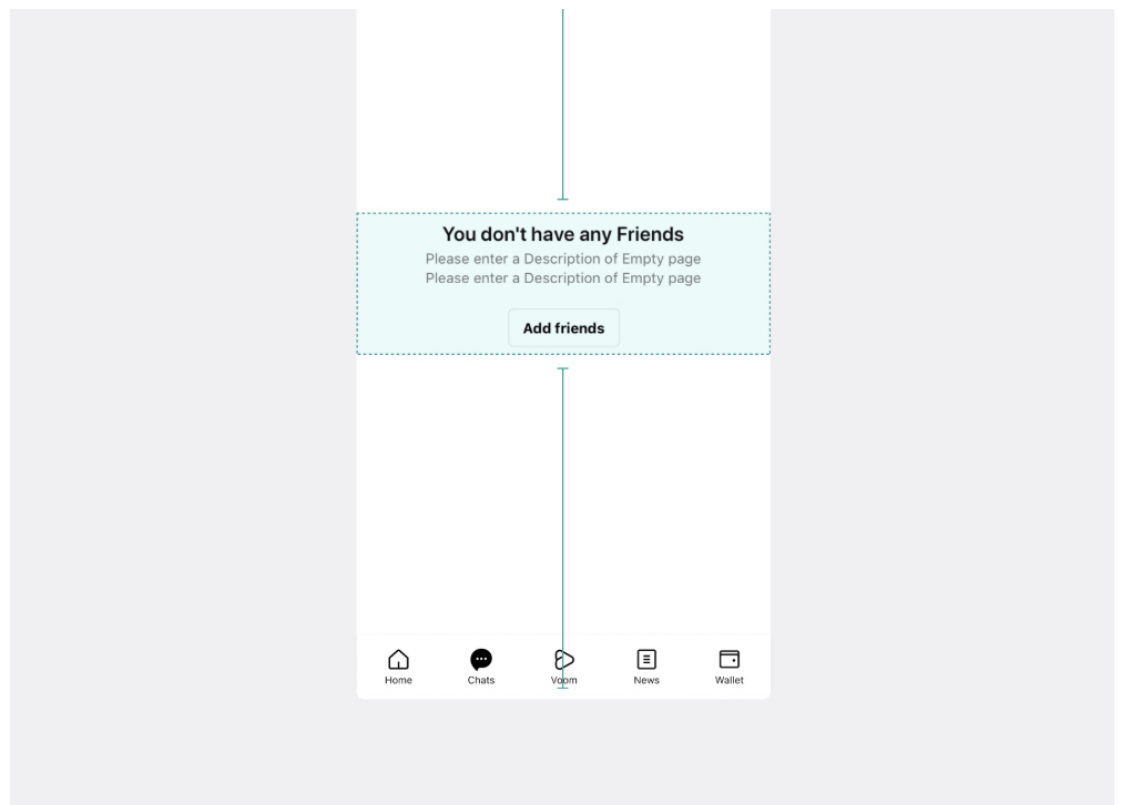

Empty classifies the component type depending on the existence of integrated components.

Usage

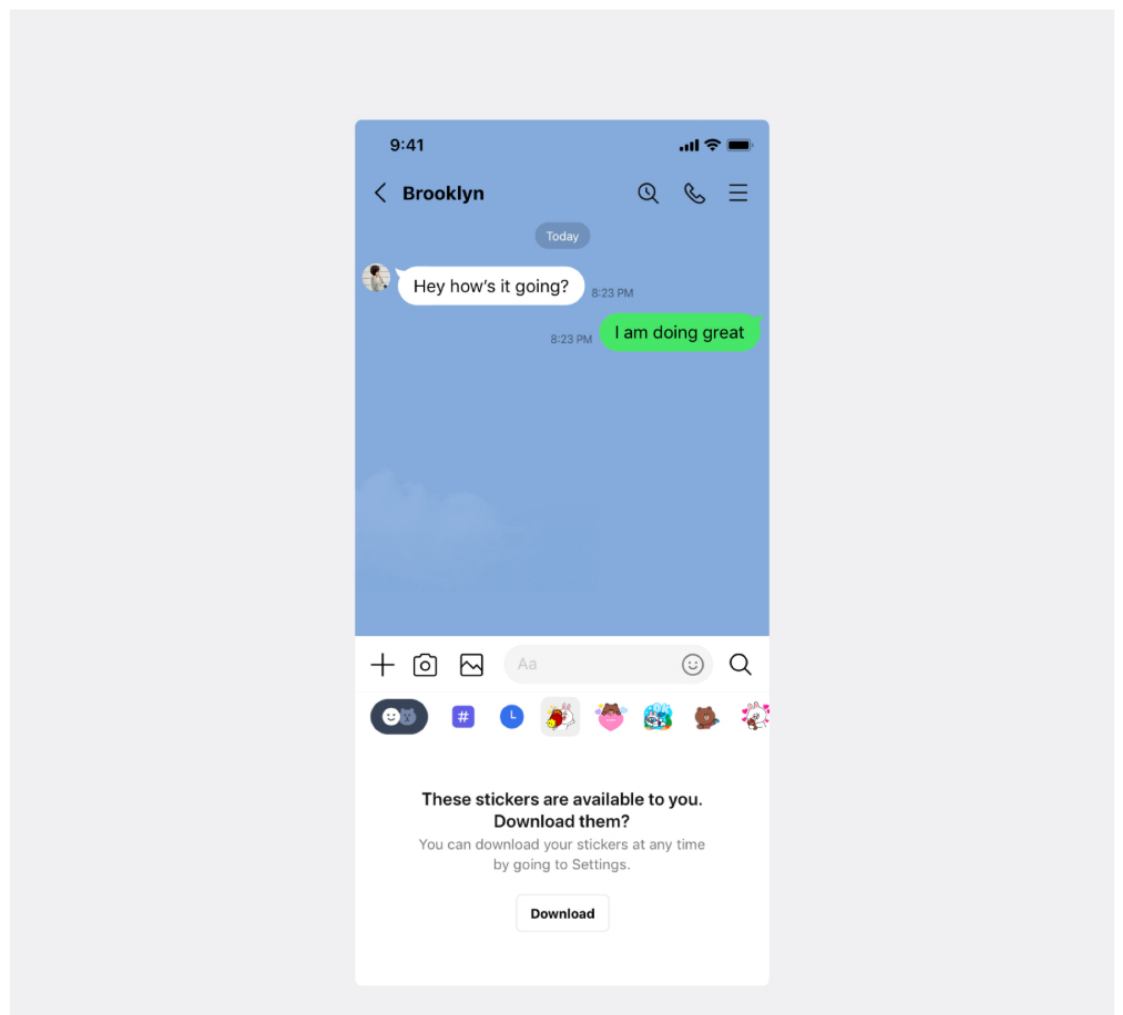

Full page

A large-sized component may be used for displaying an empty state on a full screen.

Chatroom input

A small-sized component may be used for using on some modules of the screen.

Placement

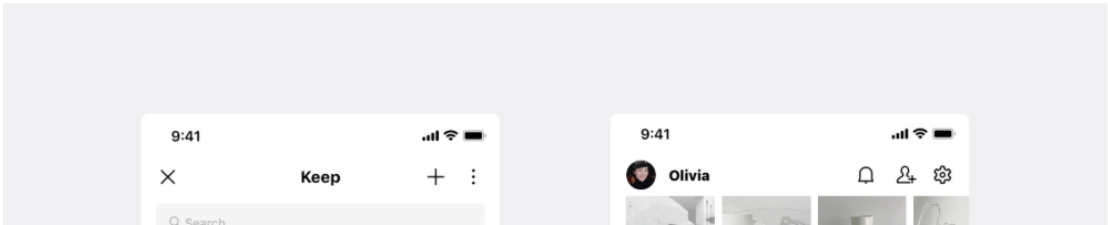

Large type

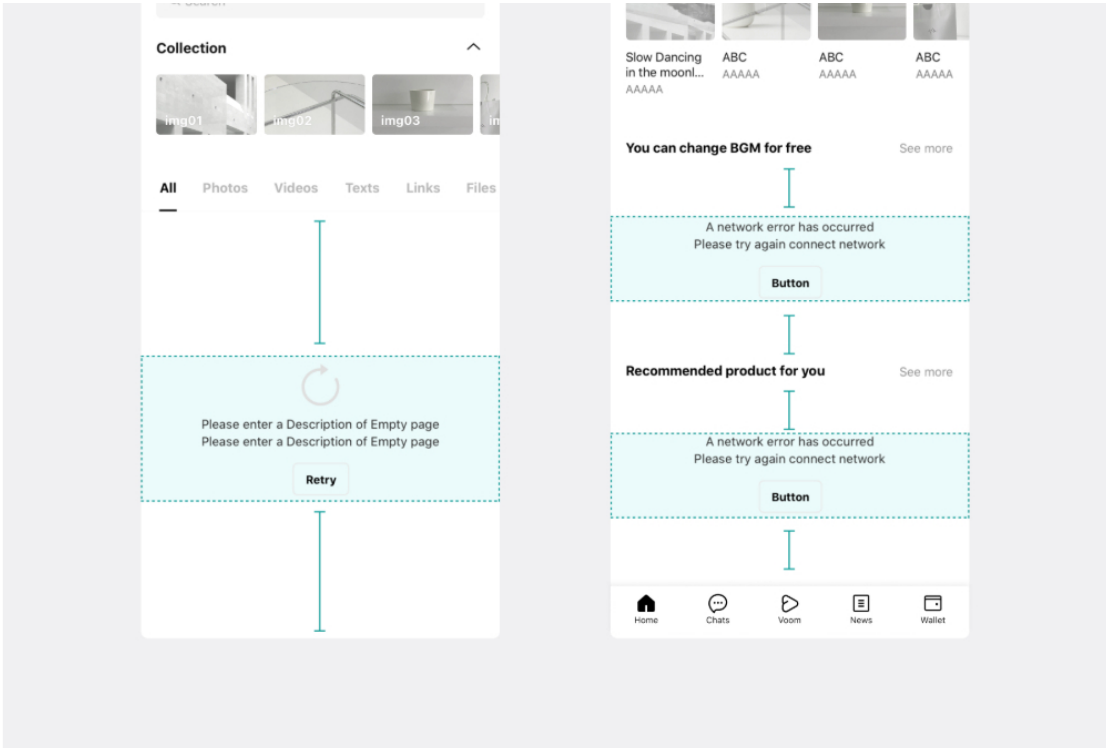

Placement Place components at the center of the area, excluding top/bottom navigation areas, for use on a full screen.

Design Guide The left and right margins are contained within the component and the top and bottom margins cannot be modified.

Small type

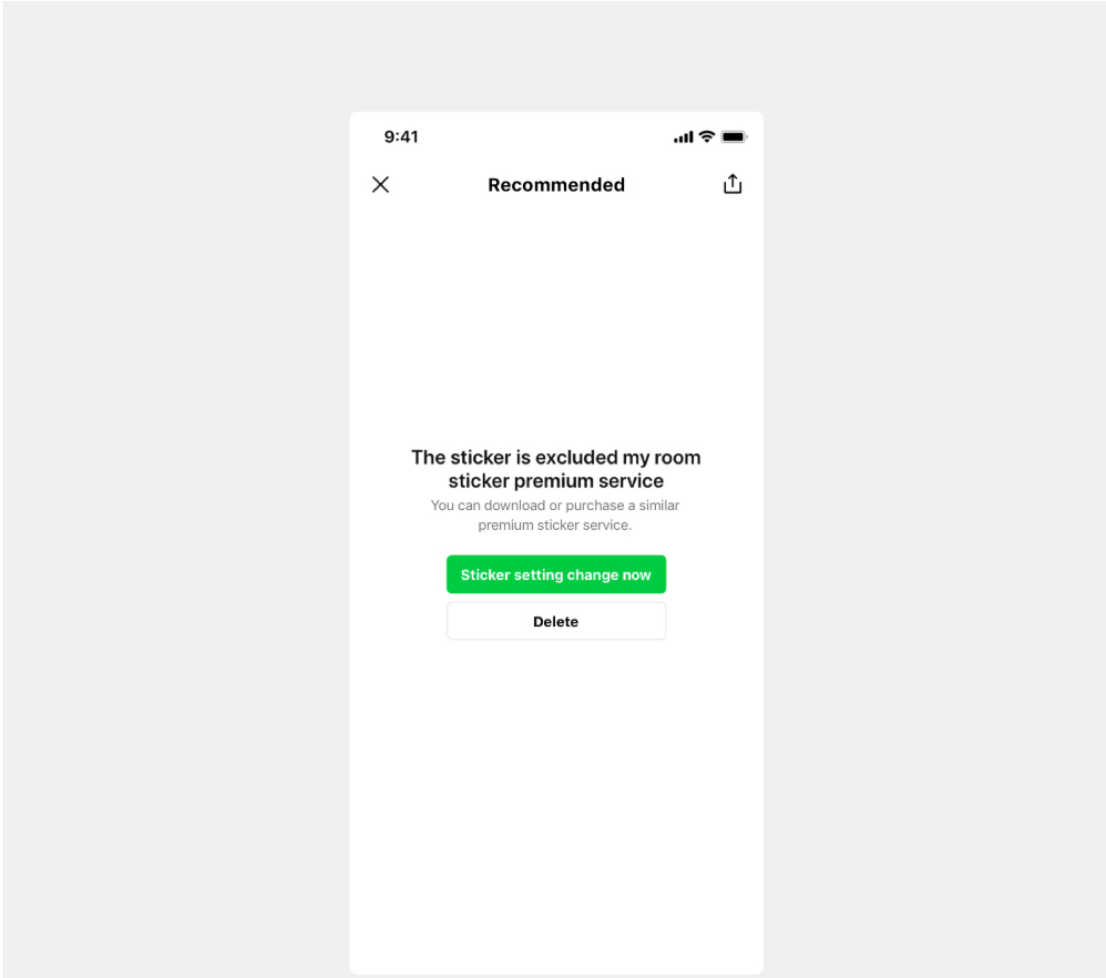

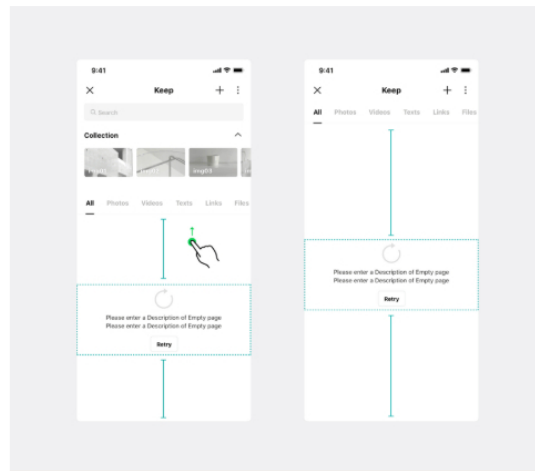

Placement Place components at the center of the module for using on some modules of the screen.

Design Guide The designer specifies the location as it is used together in a page combined with multiple components. Therefore, you need to proceed with design QA for the location.

Two Button

Use vertical placement if the button text exceeds the maximum length when using two or more buttons.

Caution

In case the area, where the empty module type is located, is variable, a guide is recommended to maintain the center alignment.
