Floating Action Button

Floating Action Button (FAB) performs the most basic and common tasks on the screen.

It is displayed in front of all contents on the screen, and is, in general, shaped circular including an icon at the center.

Anatomy

1. Button background

This is the background area that covers the largest area, and it displays the characteristics of the button.

2. Icon

This displays the content of the button.

3. Text (Optional)

Use this only for subordinate buttons displayed when an expandable button is touched.

States

Active

This is in an enabled status.

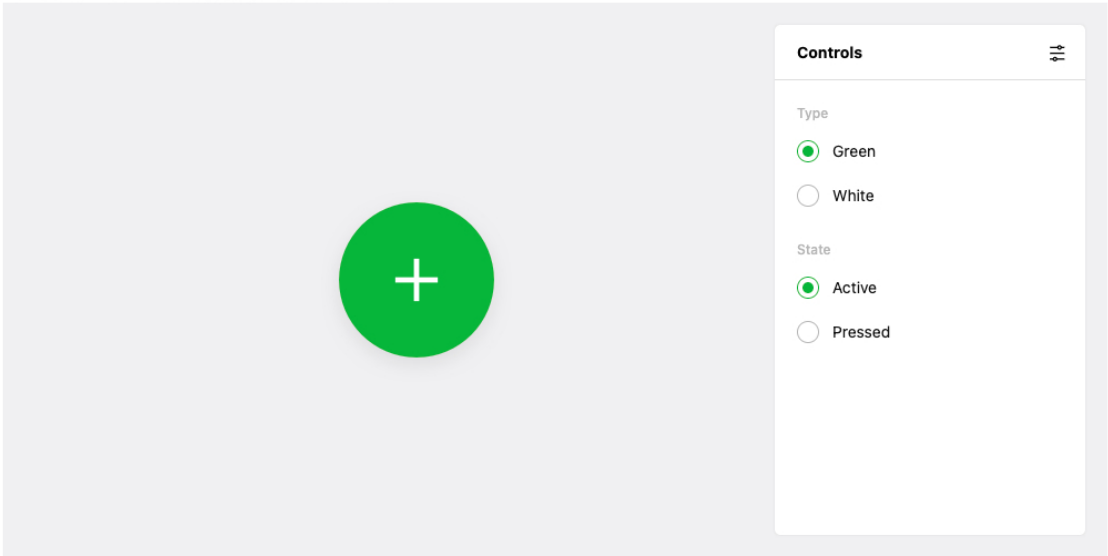

Pressed

This is a status in which a user is pressing the button.

Types

FAB is provided in two types of Green and White.

Green

This is the basic type used for 1Depth FAB.

White

This is primarily used for 2Depth FAB. It may be used for 1Depth FAB under special circumstances.

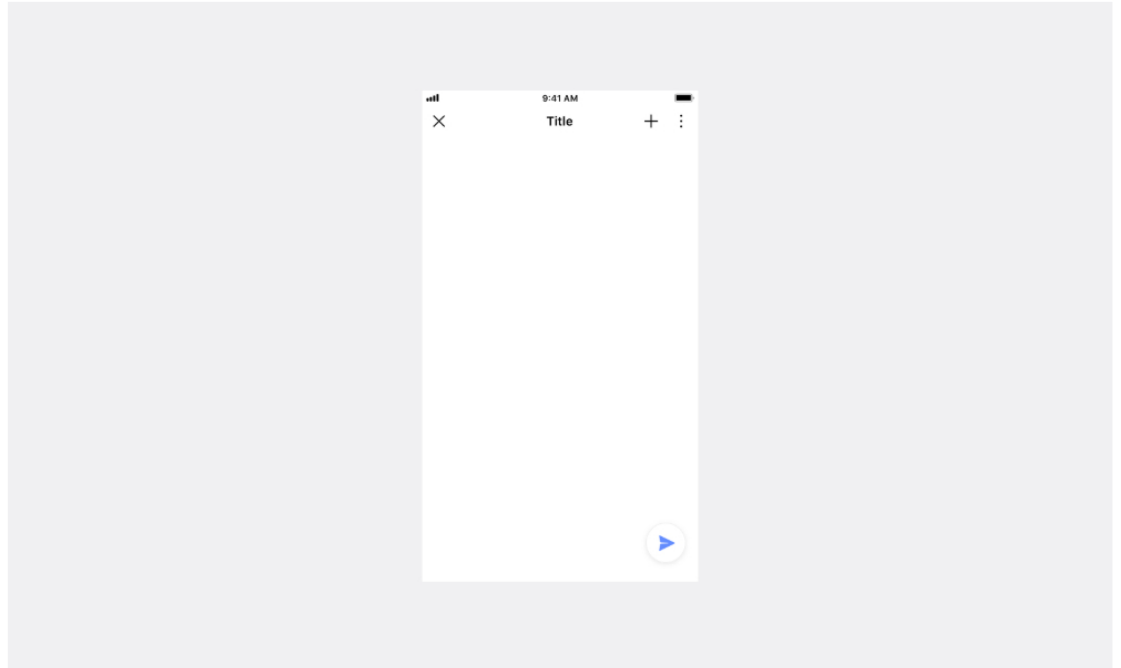

Usage

FAB is used in the following manner.

Guide to usage

	Button	StickyButton	Floating Action Button
Primary Action	✓	✓	✓
Secondary Action	✓	✗	✗
Constructive Action	✓	✓	✓
Contextual Action	✓	✗	✗
Single Context	✓	✓	✓
Multiple Context	✓	✓	✗
Space-required	✓	✗	✓
Scroll-required	✓	✓	✓

Single usage

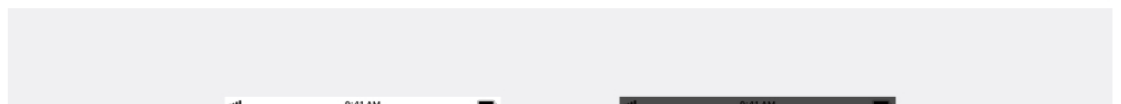

This is a floating action button that performs a single action. Use a circle button with the representative icon if you want the FAB to perform a specific action. Use the '+' icon only for expansion to avoid confusion.

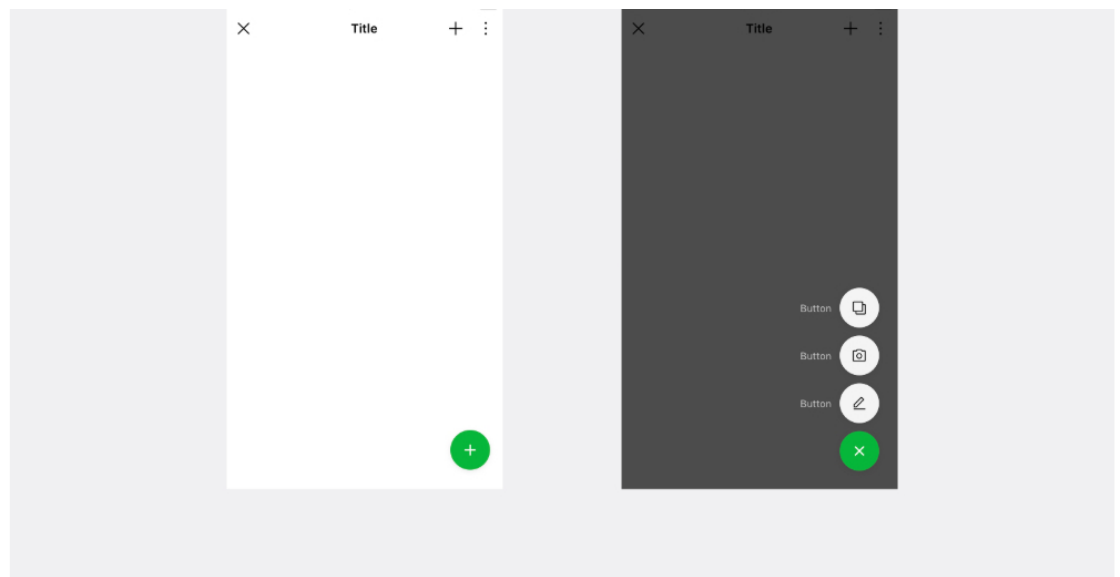

Space required usage

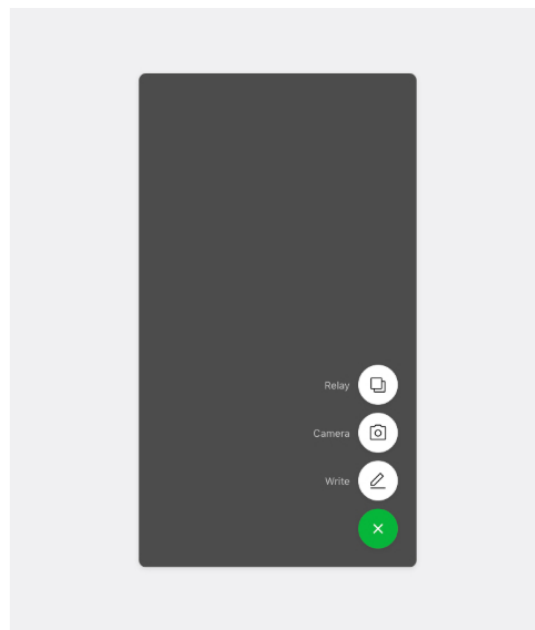

Use the FAB for the main task to allow maximum space on the screen and provide additional controls for secondary actions, if necessary.

Expandable usage

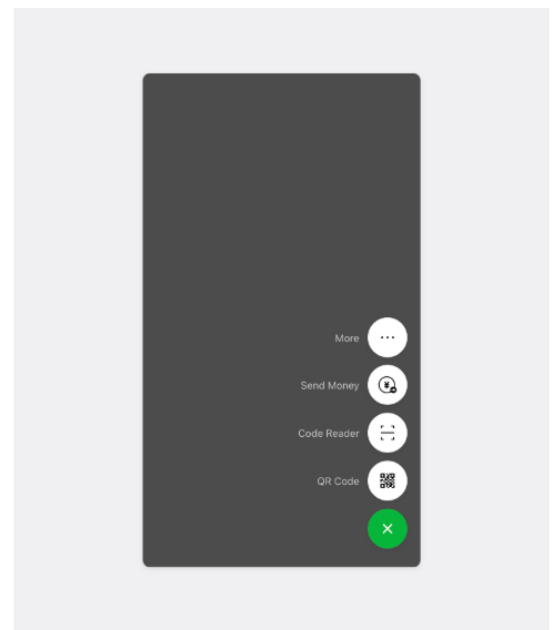

Expandable case with the FAB of Depth 2 when touched. Use for grouping single FABs for display. e. g. Adding content - Write / Camera / Relay

Do

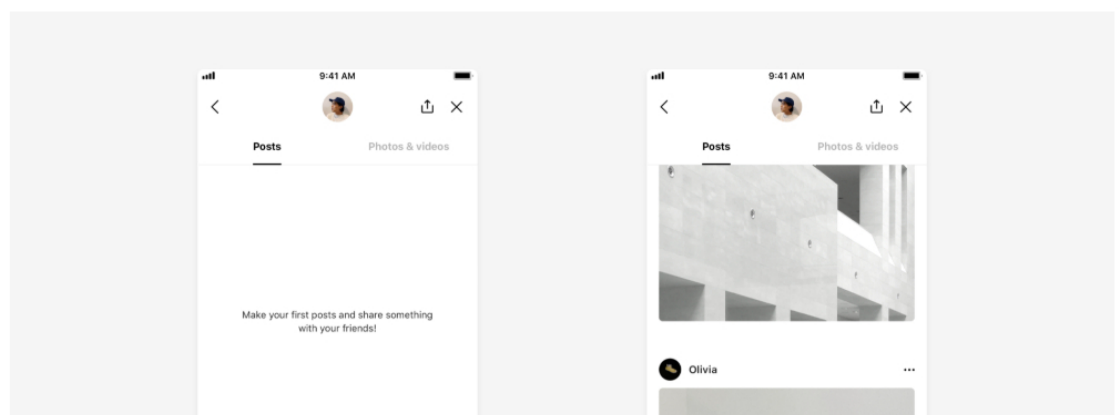

Provide 3-6 actions related to the main task.

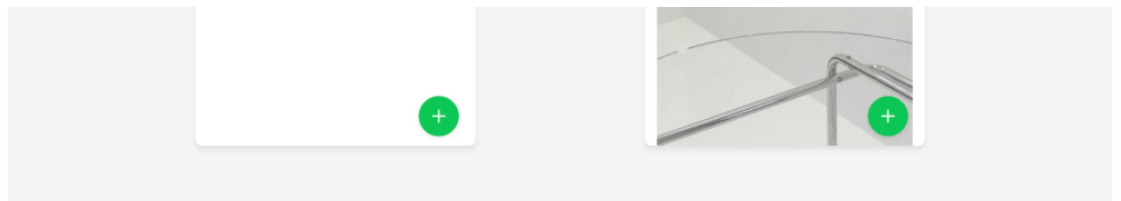

Don't

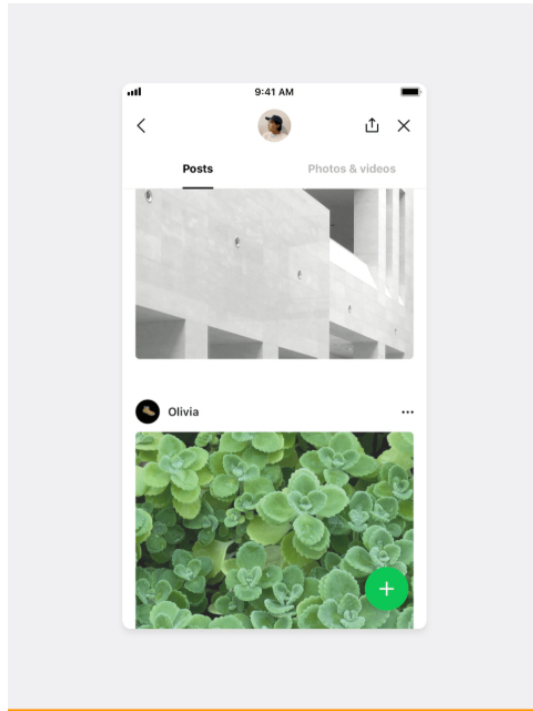

Do not expand the menu into deeper depth or provide tasks irrelevant to the main task.

Constructive action for Lists & Cards

The purpose of the FAB is to create new content in the list. Therefore, the floating action button is inherently constructive. It can be displayed and accessed when the content is added to the screen.

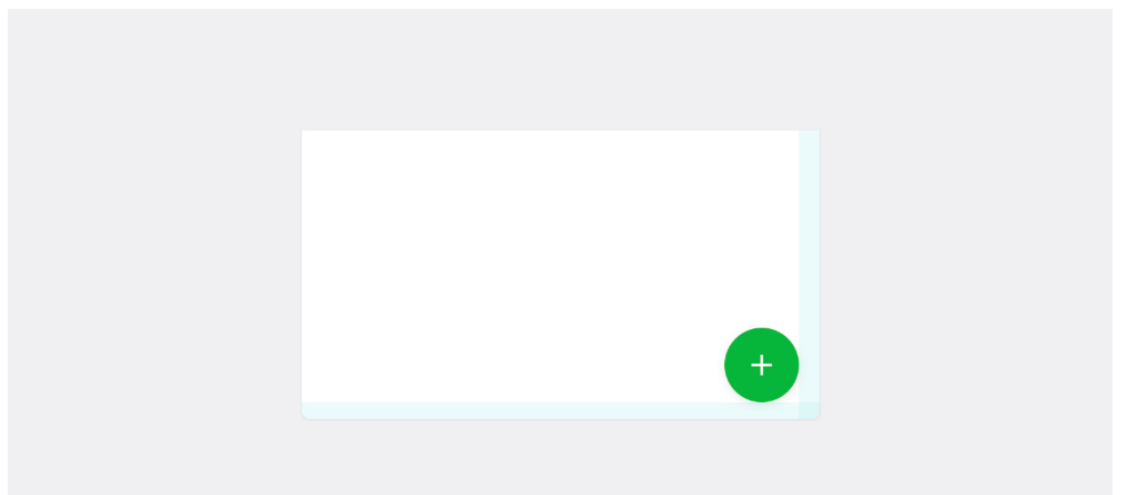

Caution

Take caution of the overlay with low contrast. The FAB may not be visible if the overlay and background have similar colors or low contrast.

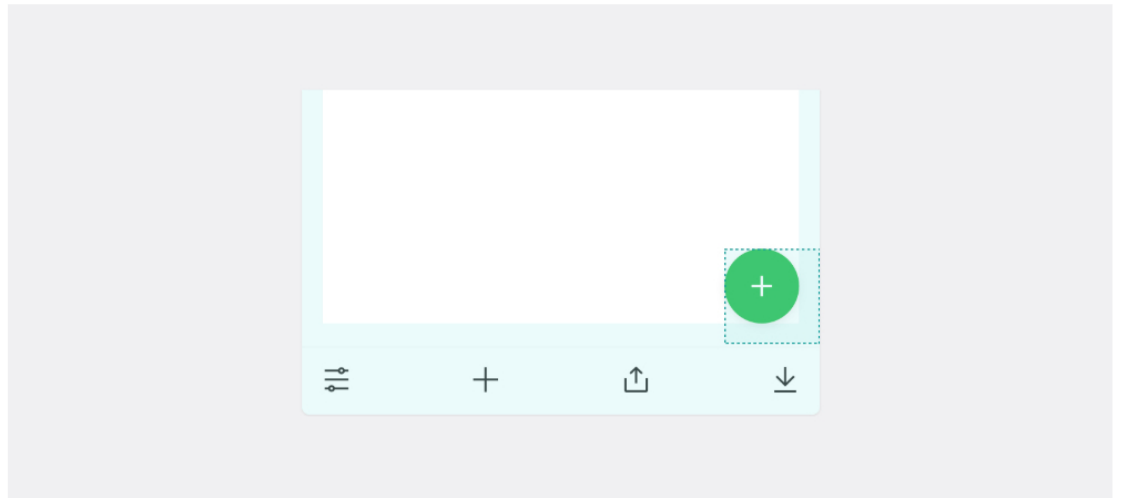

Placement

The FAB is always on top of everything on the screen.

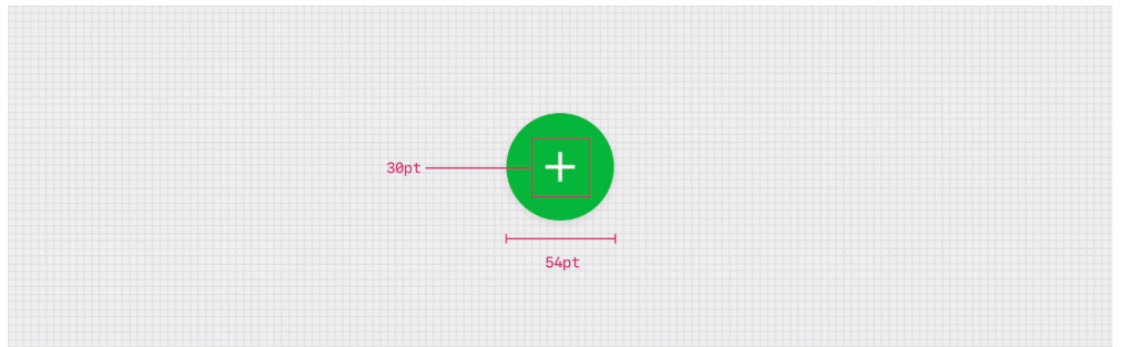

Place the FAB at the bottom right with a certain margin. It is recommended to place it with a spacing of 16 pts. Design QA is required as it is not included in the bottom and margin components

is not included in the system and margin components.

When there is bottom navigation, the FAB is placed on top of the bottom tab navigation. Design QA is required as it is not included in the bottom and margin components.

Design spec

FAB does not allow design customization.

FAB is provided in two colors of White and Green and in one size. As no margin is included in the button component, design QA is required for Placement.
