Keep

You can check the LINE design system components used in Keep, which lets you easily check and put in the contents desired by the user.

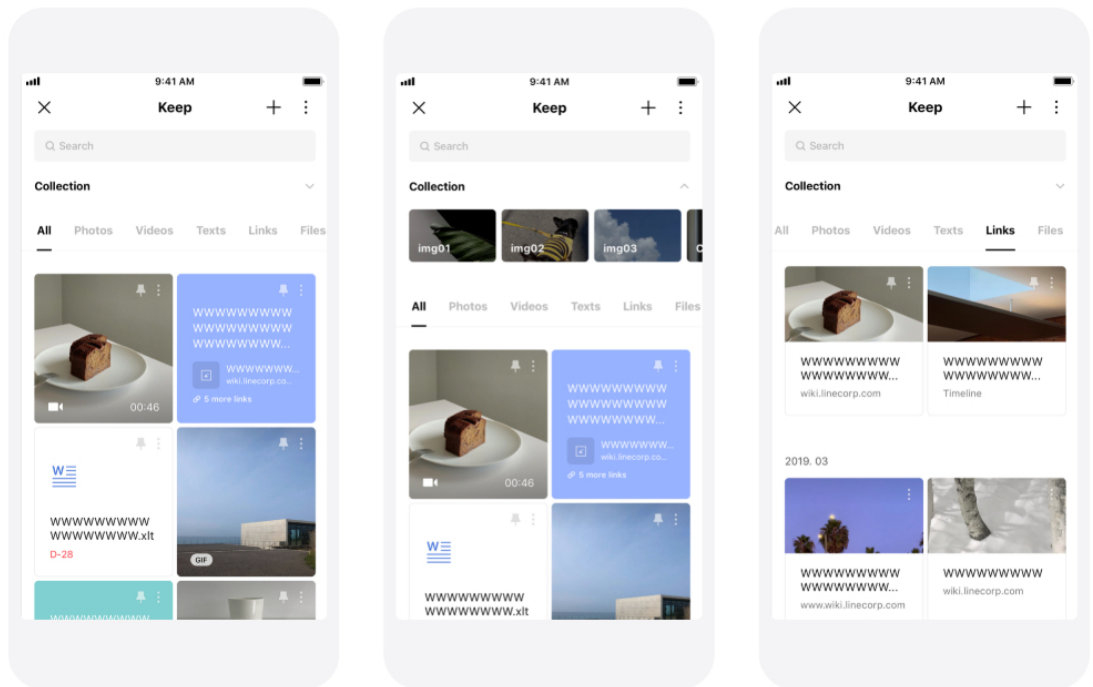

Features

Keep Home

In Keep Home, you can check the content stored by the user at a glance. It follows the LINE design system Modal guideline, and you can find and classify the content stored by the user using the LINE design system Search bar and Tab components.

[Modal Guideline >](#)

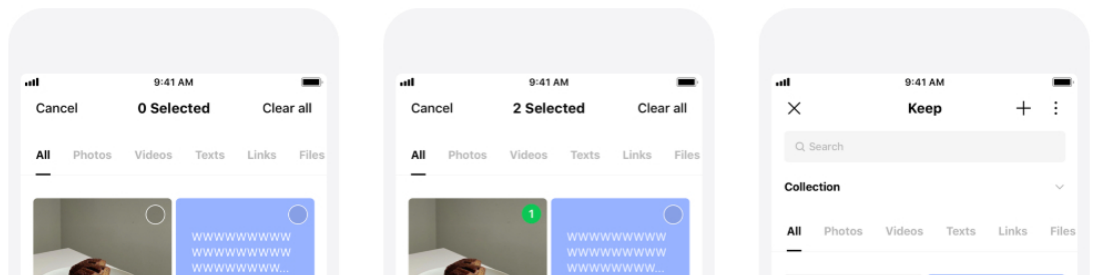

[Search Bar >](#)

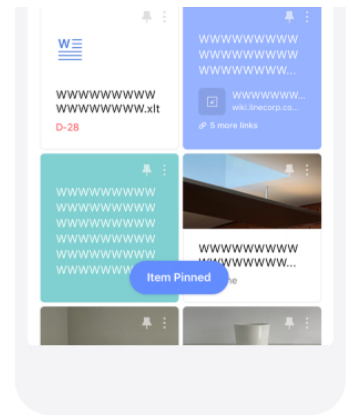

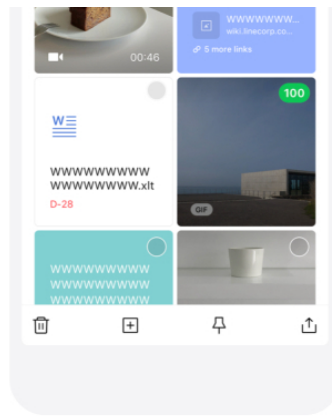

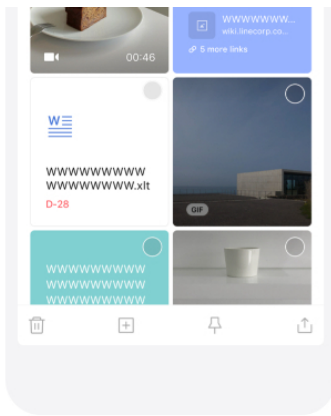

More menu

You can enter the selected screen through the View More menu, and move or delete them by selecting many cards. When selecting many cards, the number-type LINE design system checkbox component is used.

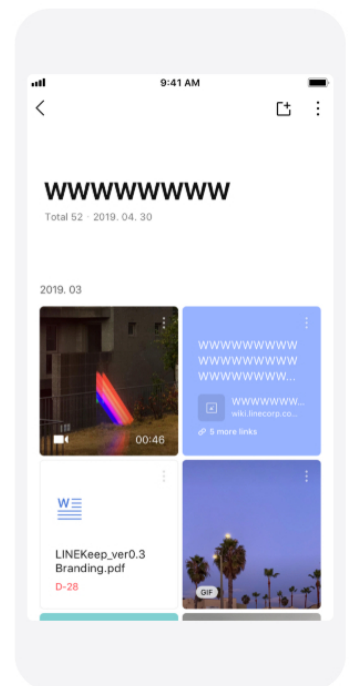

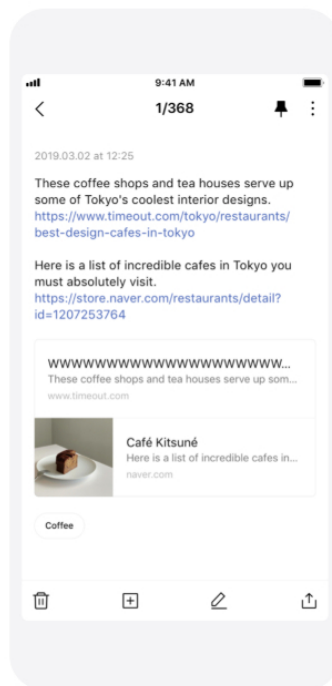

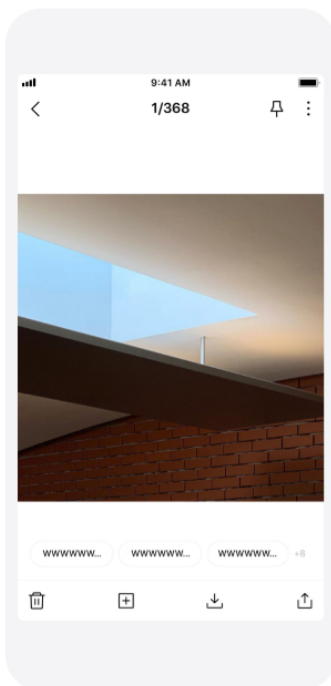

[Checkbox >](#)

Contents / Collection

You can check on full screen by selecting the specific content. You can save or share using the toolbar at the bottom and move to the desired collection.

Popup

The informing-type LINE design system popup component is used for guiding the service when the service is entered for the first time. Deliver content intuitively through the configuration of the image and pagination.
