Overview

By using the foundation elements in designs, you can enhance the overall consistency of the LINE Global Family Service. Also, they can work as the common means of communication between developers and designers.

Supporting Scope

Foundation provides eight visual elements. For detailed information, see the page for each category.

Category	Visual Elements	Prefix
Color	Colors	ldsg-color
Typography	Typography	ldsg-font
	Line Height	ldsg-lineheight
Layout	Breakpoint	ldsg-breakpoint
	Spacing	ldsg-spacing
Object Style	Radius	ldsg-radius
	Border Width	ldsg-border
	Shadow	ldsg-shadow

Design Token Names

Design token names have specific rules from which the properties of a design token can be deduced.

Prefix						
LDSG	+	Visual Element	+	Category	+	Value
LINE Global Family Service		color		green		100
		typogrpahy		title		200
		radius		:		300
		:				:
Category	Description					
Prefix	Consists of "LDSG" + Visual Atom. The "LDSG" string must be used to distinguish the used design system from the code. Visual Elements include visually appealing factors, such as Color, Typography, and Radius.					
Element Category	Indicates the subordinate categories of a visual element. Each element has different categories. For colors, it indicates the color names, such as Red and Green, and for typography, it indicates typography elements, such as Headline and Subtitle.					
Value	Indicates the increase, decrease, or change of a value. All elements other than Typography are used on a 100 unit basis. Larger numbers indicate higher values. Although 100 is the smallest unit, 50 may also be added as the smaller unit if required.
