Page Indicator

A page indicator shows the total amount of pages and the current page using numbers or dots. Two page indicator types are available: Dot page indicators and number page indicators.

Anatomy

1. Activated Dot
2. Inactive Dot
3. Container
4. Current Page
5. Total Page

Element Patterns and Types

- Choose either the dot page indicators or number page indicators, or use them together.
- When using dot page indicators, the number of dots varies depending on the number of pages.

Dot Page Indicator

Under 5 Pages

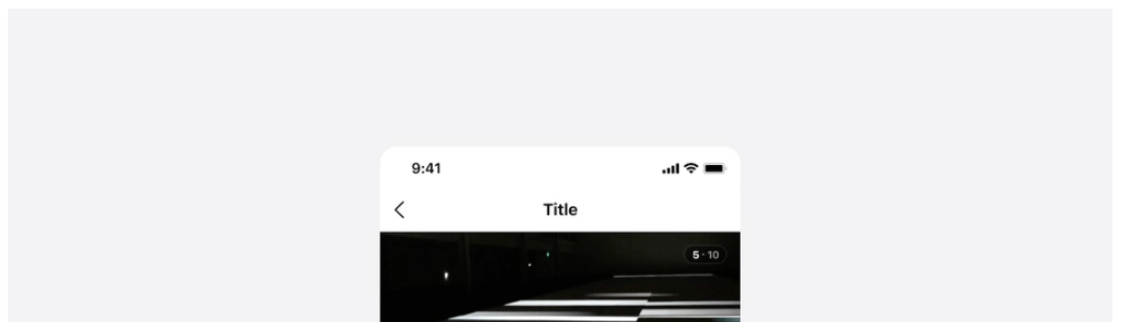

If there are fewer than five pages, the number of dots will be the same as the number of pages.

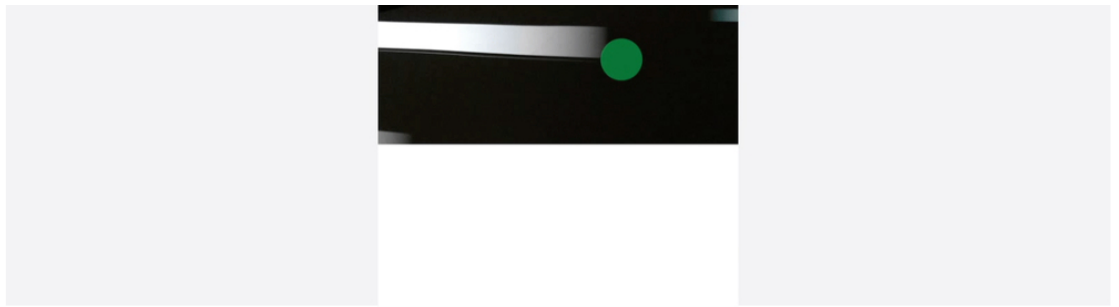

Over 6 Pages

If there are more than six pages, the number of dots will be less than the number of pages.
The dot size changes when the user moves to another page.

Number Page Indicator

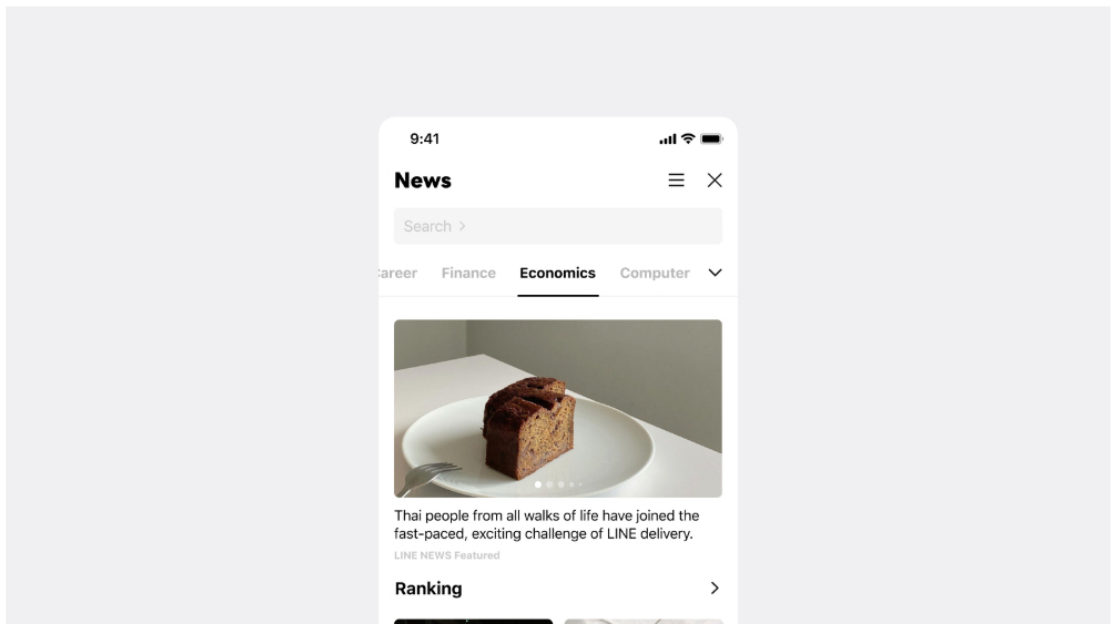

The current page number changes when the user moves to another page.

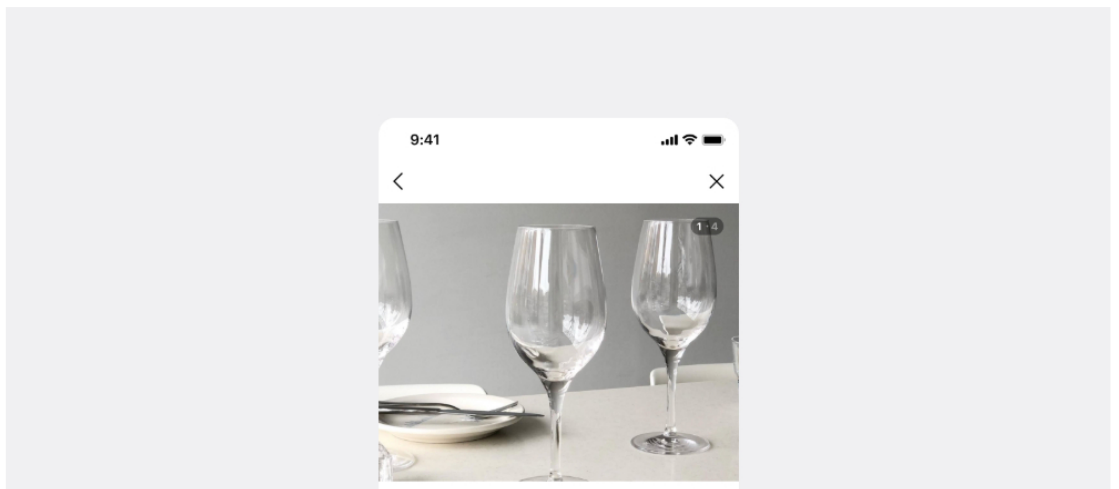

Usage

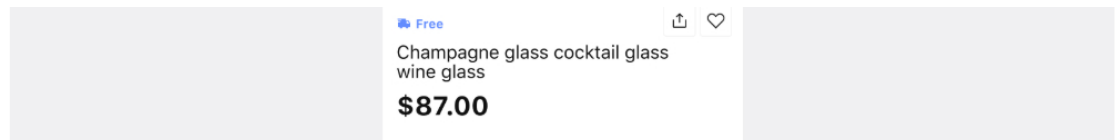

Dot Page Indicator

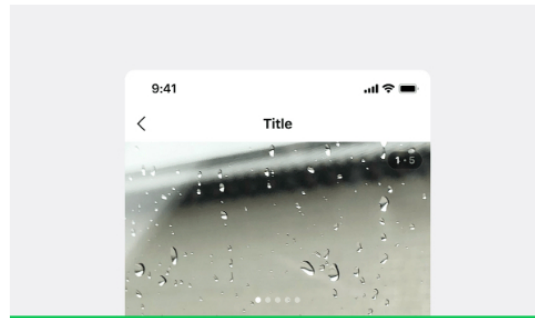

- Suitable for content-oriented images where the information in the content is more important than the total page count information.
- You can also use this indicator for image feeds.

Number Page Indicator

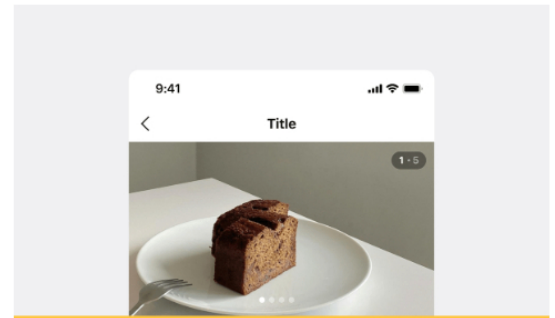

- Suitable for images requiring high user involvement where it is necessary to clearly provide the page information.
- Because this type of indicator displays the current page and the total pages, it is easier to recognize the total amount of content compared to the dot page indicator type.
- You can use it for thumbnails in product details pages in shopping mall websites where detailed image information needs to be provided for the user.

Do

Place the information, such as pages and images, in a way that makes them clearly visible.
Make sure the page indicator does not interfere with the content.

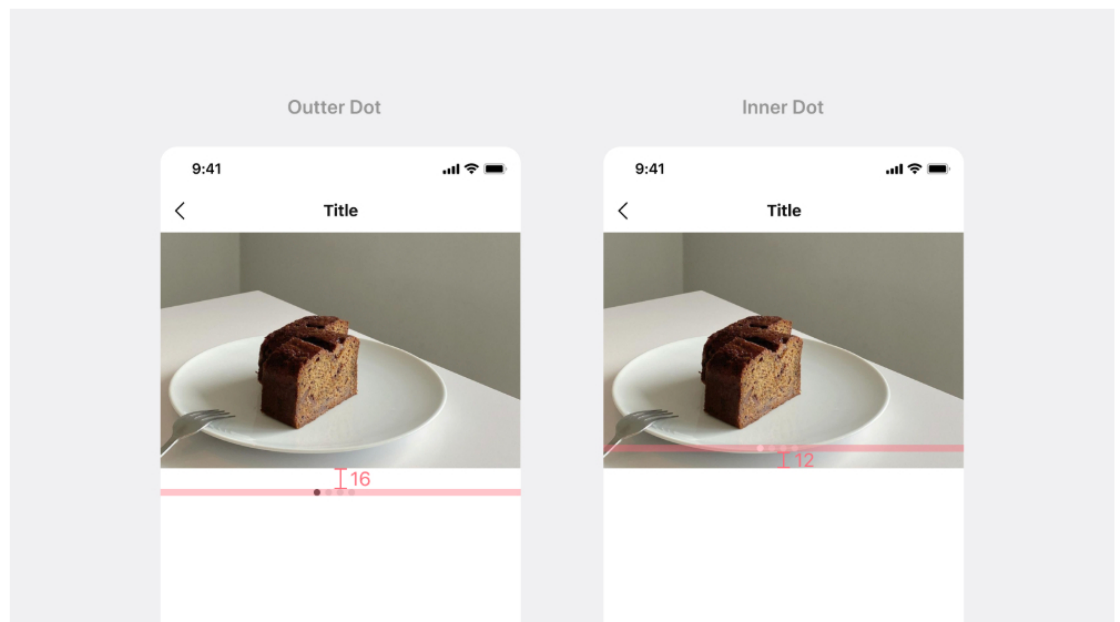

Caution

Number page indicators and dot page indicators can be used together. In this case, set a specific rule to display number page indicators only when conditions are met.

Design Specs

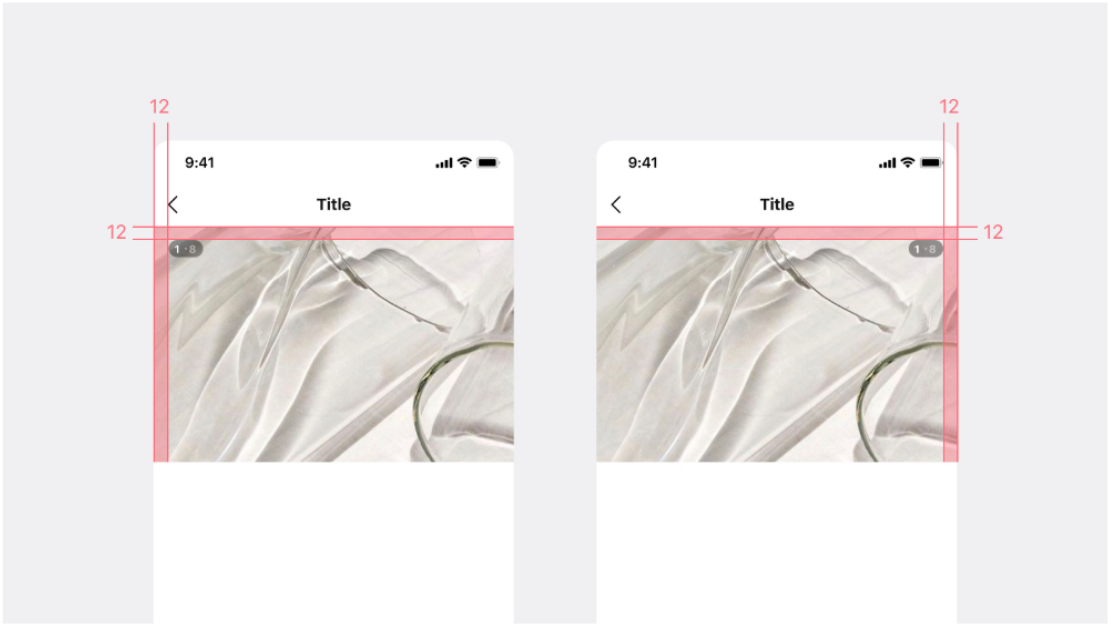

Placement

Dot Indicator

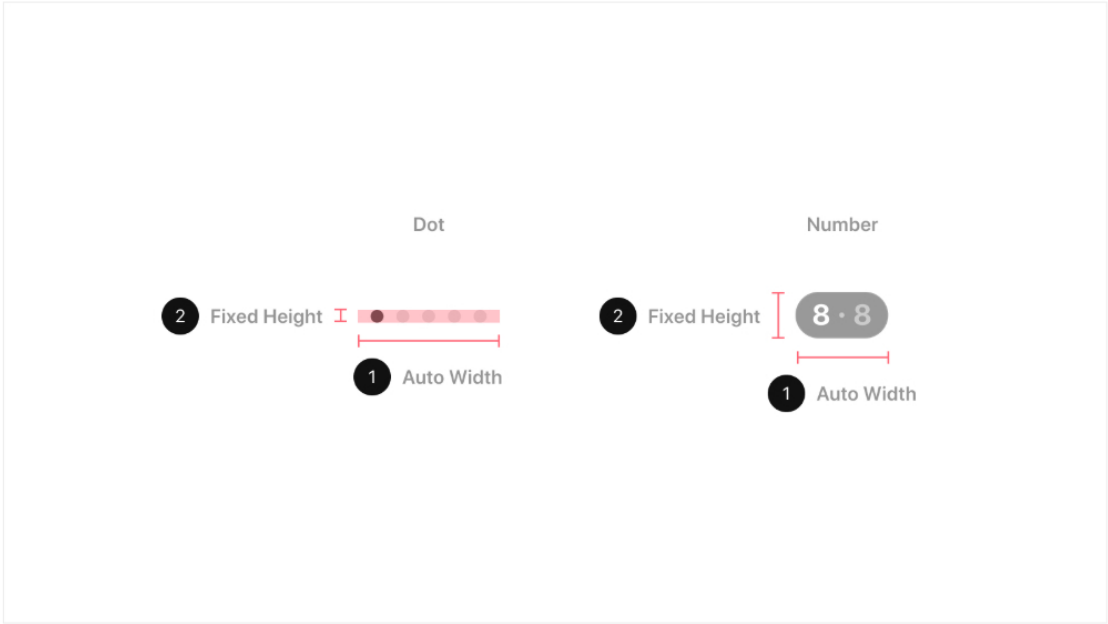

You can place the indicator inside or outside the content.
We recommend you leave a margin of 16 px when placing it outside the image and 12 px when using it inside the image.
You can change the margin if necessary.

Number Indicator

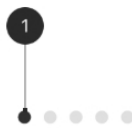

Place the indicator at the top of the content.
We recommend you leave a margin of 12 px.
You can change the margin if necessary.

Resizing

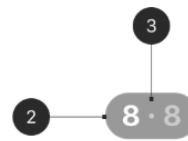

Value	Description
1 Auto Width	Dot: The width is automatically adjusted according to the number of dots. Number: The width of the container is automatically adjusted according to the number of digits.
2 Fixed Height	You cannot change the height of the container, since it is a fixed value.

Styles

Dot

Number

Element	Properties
1 Dot	- Size - S (Default): 5px - L: 7px - Color: Changeable - Active: Idsg-gray-800 - Inactive: Idsg-gray-300
2 Number Page Indicator Container	- Background: Changeable - Default: Idsg-opacity-black-40 - Width: Unchageable, Auto Width - Height: Undhageable, Auto Height - Border: Unchangeable, Idsg-opacity-white-10
