Profile

Profile in LINE Design System signifies the circular component, which represents the user on a screen. Images or graphics set by the user are applied as a circular form and exposed to the areas required in the LINE app.

Anatomy

1. Profile circle

Represents a user on the screen as one of the user's profile elements composed of a circle. In most cases, the detailed profile page of the user is entered after tapping this component.

2. Ring area (Optional)

The ring element around a circular profile is used for indicating the user status.

3. Badge area (Optional)

This is an area to expose a badge to display the user status and placed on the top-right corner.

4. Icon area (Optional)

This is an area to indicate the details as an icon on the bottom-right corner when an option related to the user is set up.

Types

Profile is configured as a single component.

Common

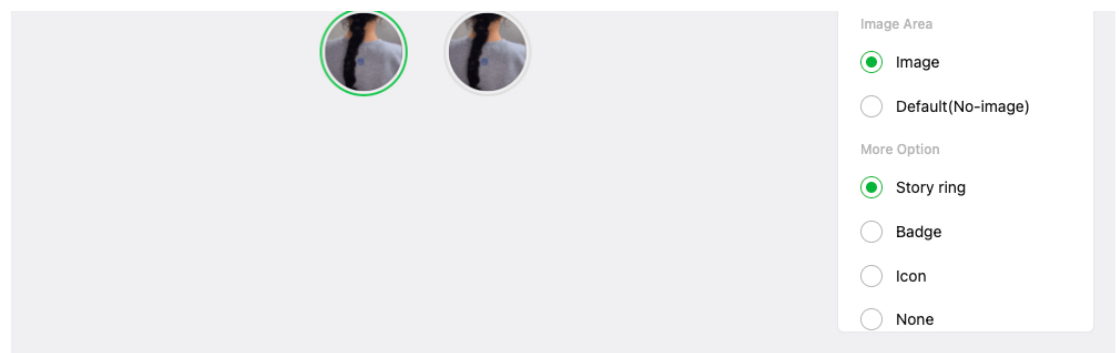

Controls

Type

☒ Single

☐ Multiparty

☐ Grouped

Single

You can use this type to display one user independently.

Multiparty

You can use this type to display by dividing up two or more users inside a circle.

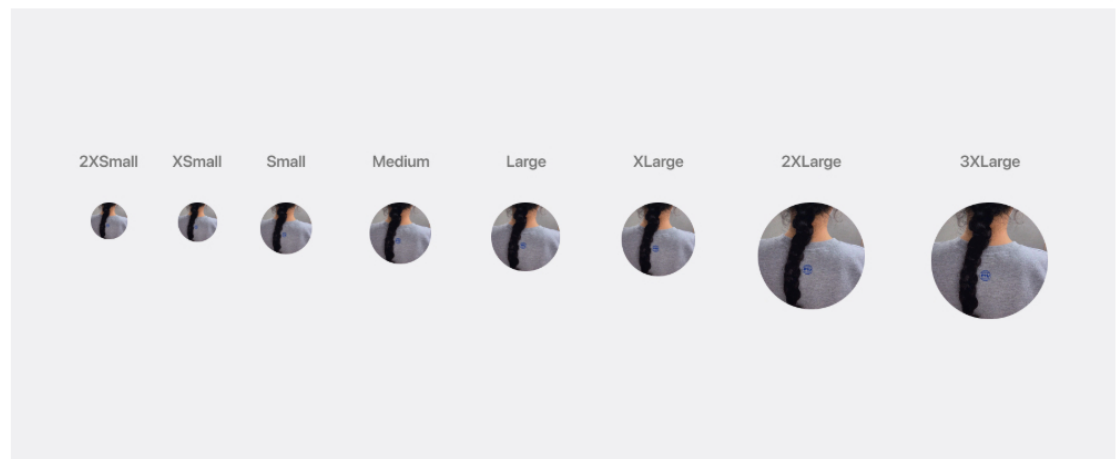

Grouped

You can use this type to display a group by piling up the default profile to represent the group and many single profiles.

There are cases of displaying a profile of one user independently and displaying a profile by grouping two or more users. You can use by selecting an appropriate type according to the place to apply the component.

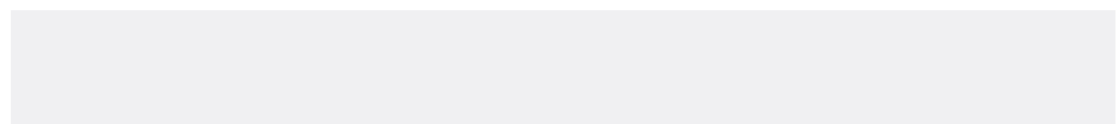

Profile size

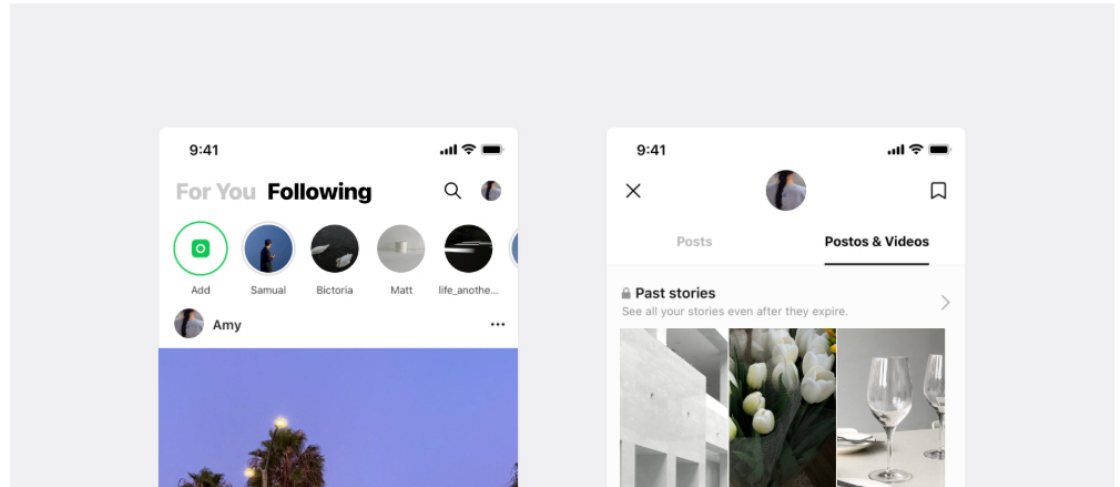

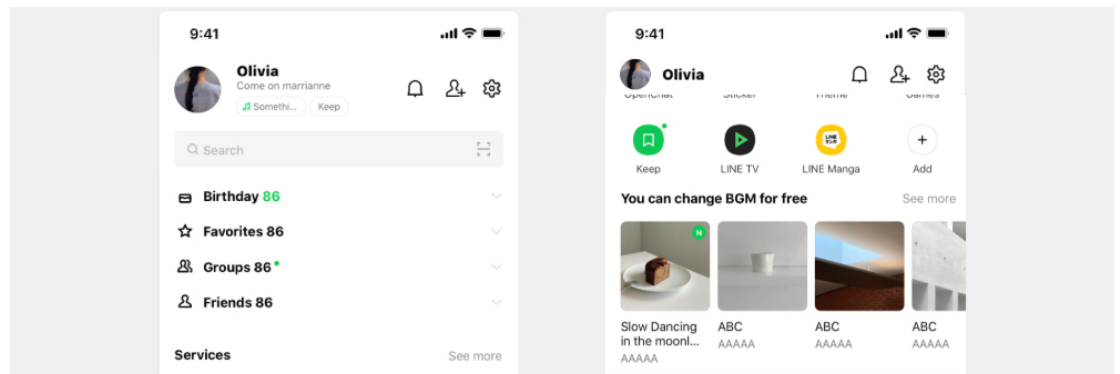

Eight sizes are provided to fit various environments. (Refer to the design spec.)

Usage

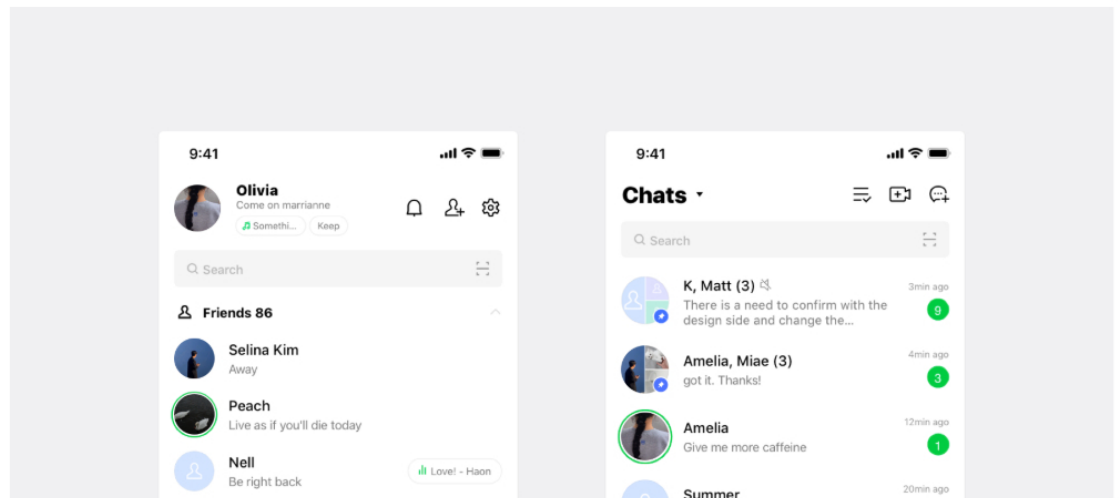

Top navigation

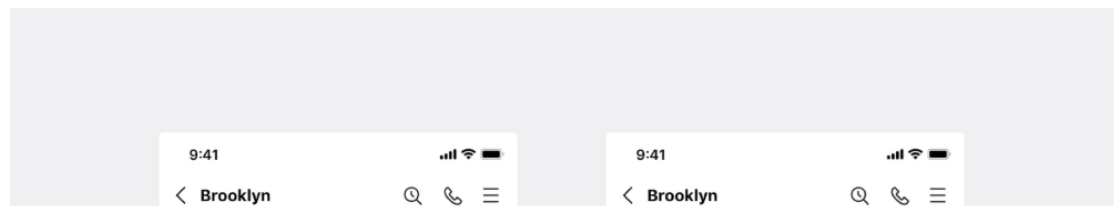

Use profile as shown above in the top navigation.

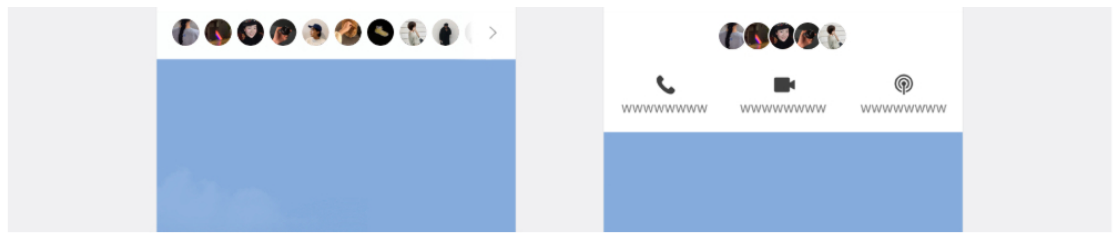

List

Profiles below are shown on friends list and chat list. Use a single-type profile in one-on-one conversations and use a divided multiparty profile for multiparty conversations.

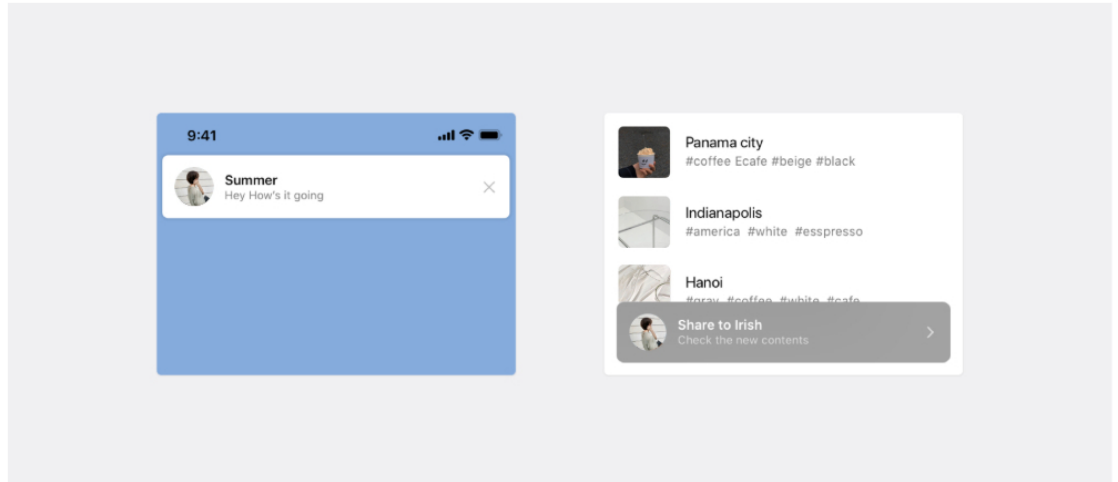

Chatroom

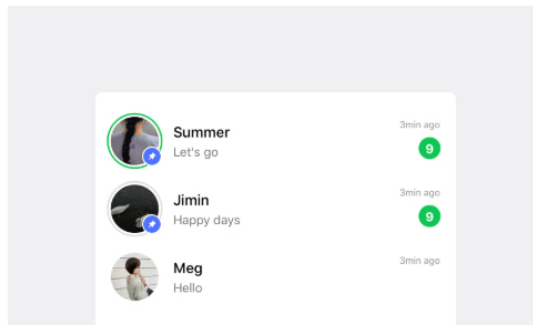

Use profiles as shown above in group chat rooms with two or more people.

Snackbar

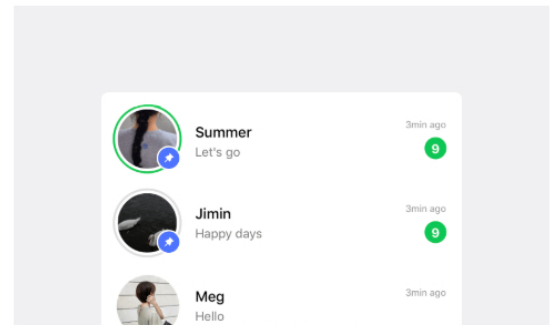

Use profiles as shown above in a snackbar.

Do

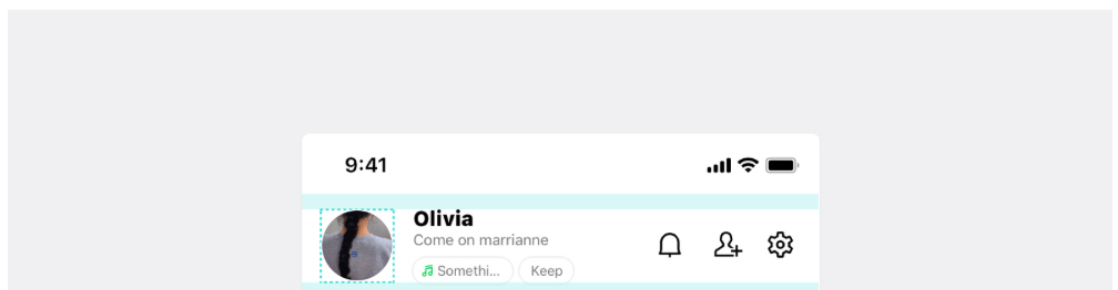

You can apply by duplicating all option elements to the profile immediately depending on the situation. (Badge, icon, story ring)

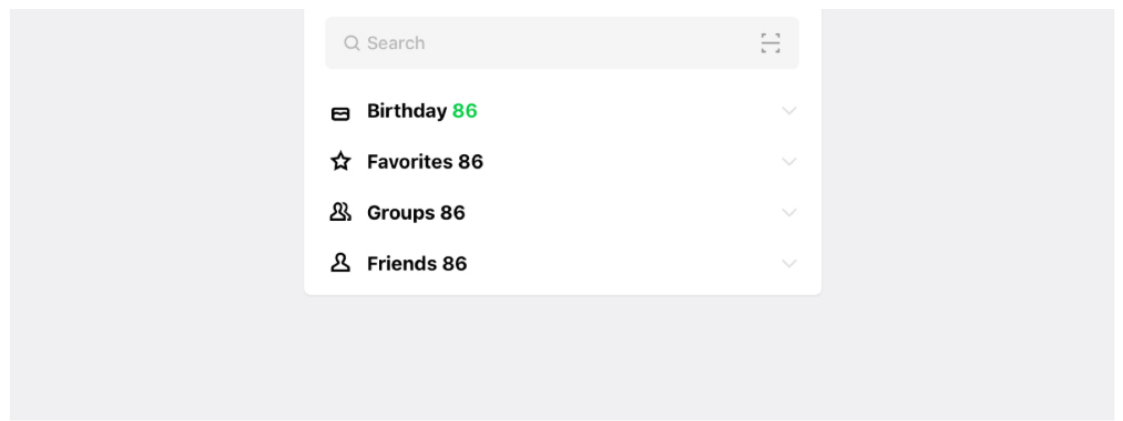

Don't

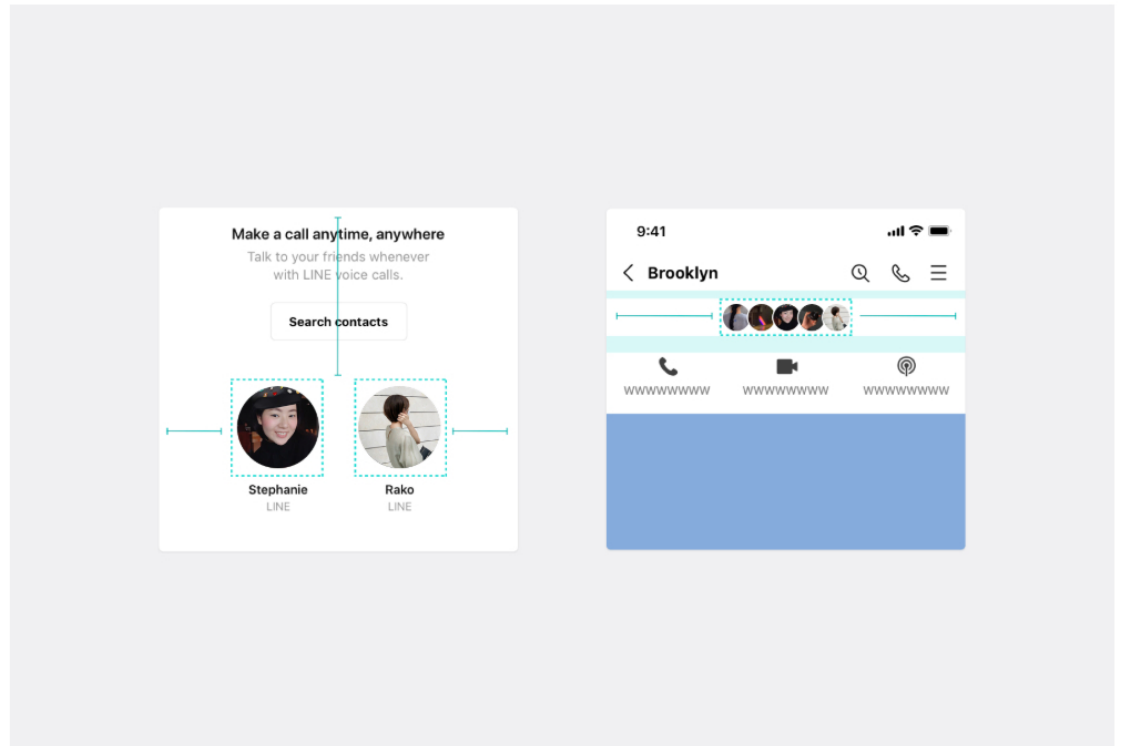

Do not use by adjusting the component size at your discretion. Submit a request to the LINE Design System team if there are cases that must be added other than the sizes provided by LINE Design System.

Placement

Place at the top/bottom center inside top navigation or list component.

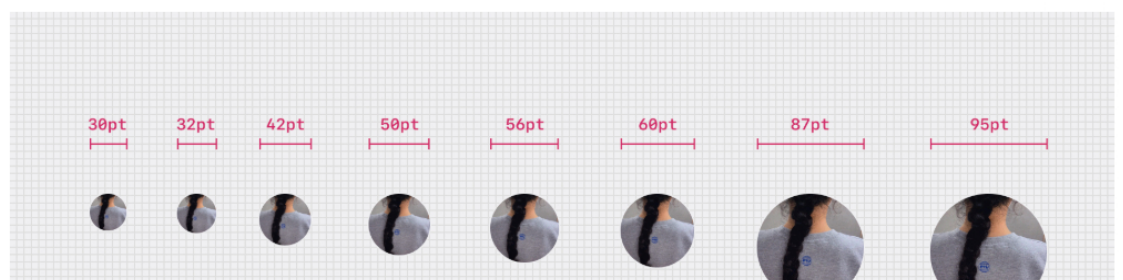

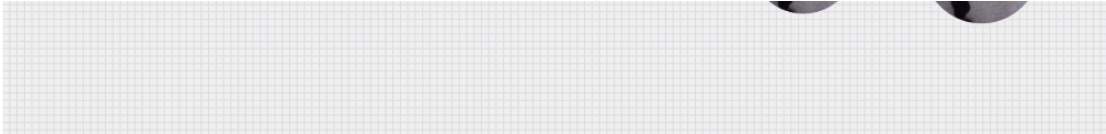

Profile component must be applied suitably for the surrounding components, and the purpose of use as it can be applied to the various areas on the screen.

Design spec

Use without detaching the sketch symbol because profiles have no parts that allow customization.

Size

Don't Request design QA

Because it is used on pages along with various components, its location is designated by the designer. Therefore, design QA needs to be carried out for the location.

Component Type	Size	Used feature
2Xsmall	30pt	Chatroom
Xsmall	32pt	List XS
Small	42pt	Hometab, Friends list (Lists)
Medium	50pt	Chat list (List M)
Large	56pt	Notification (List L)
Xlarge	60pt	List XL
2Xlarge	87pt	Call
3Xlarge	95pt	Openchat
