Radio Button

The radio button is used when a single selection is required. If you select a different radio button, the previously selected radio button will be deselected.

Anatomy

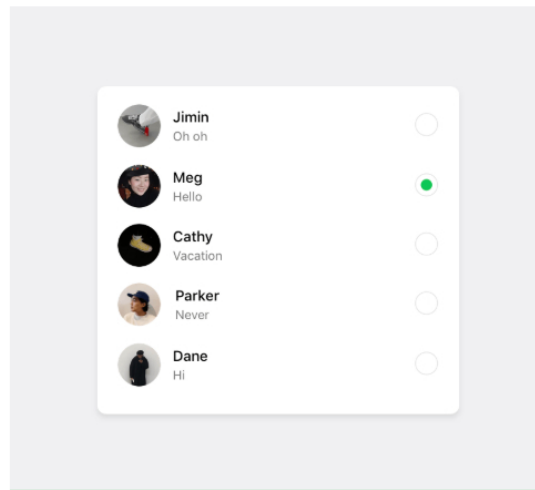

1. Background & Border

The boundary of the radio button is marked.

If placed above an image, the background area will be colored in.

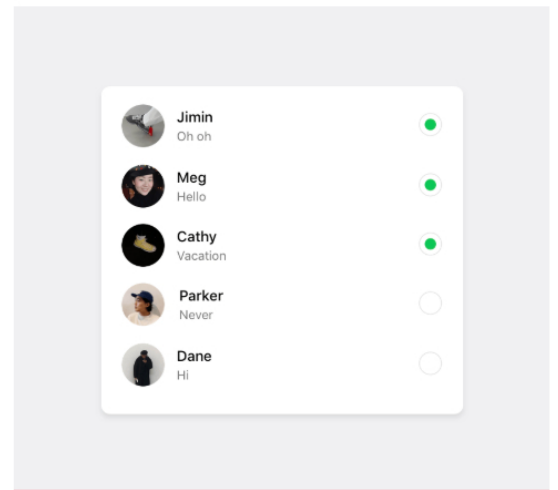

2. Inner circle

Determines whether or not to select depending on the existence of a circle.

Do

Radio Button is used for selecting a single item.

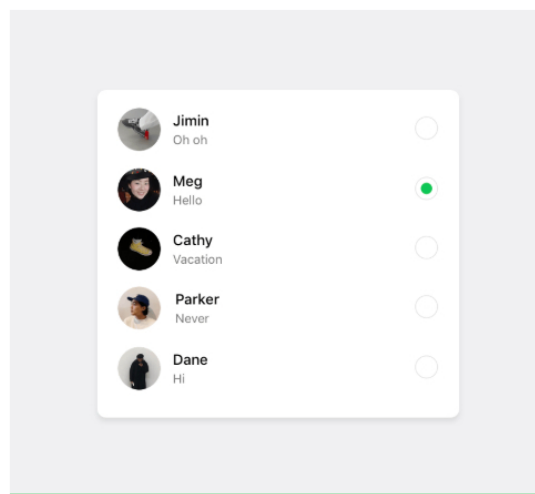

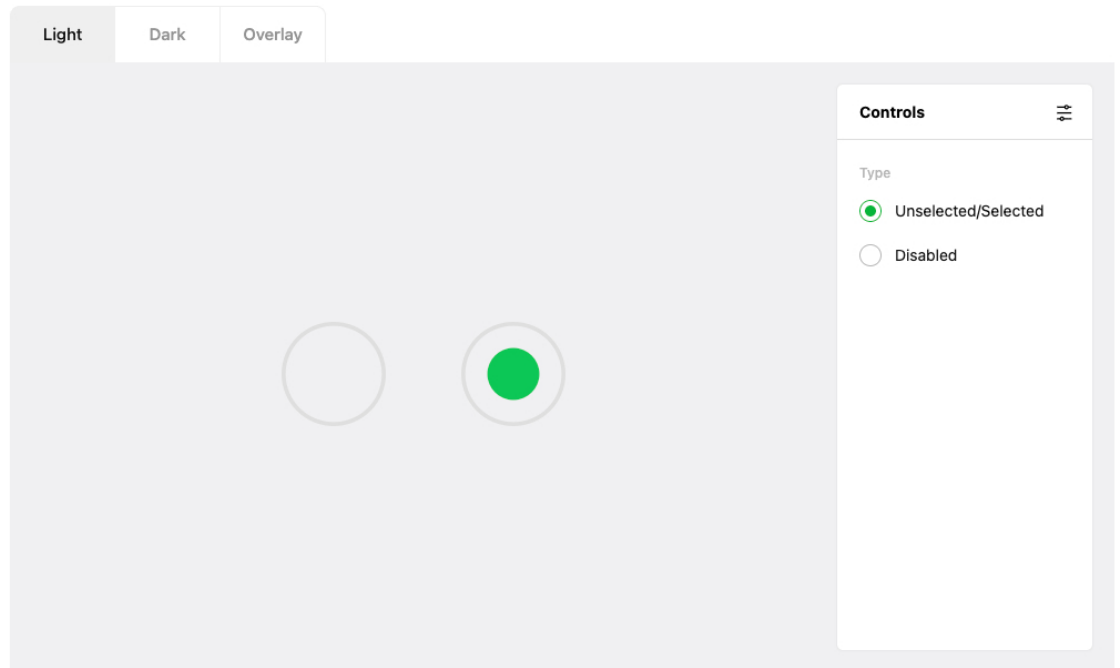

Don't

Radio Button cannot be used for selecting multiple items.

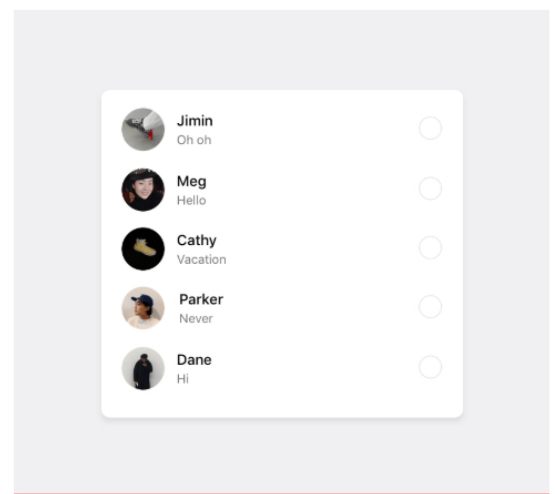

Types

The radio button provided as a single type.

Do

Always provide a default selection to users.

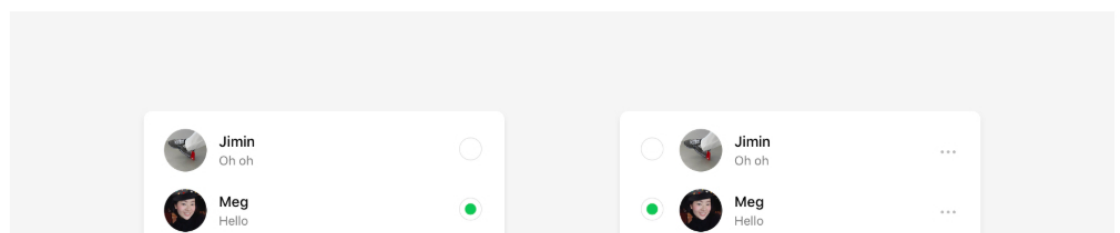

Don't

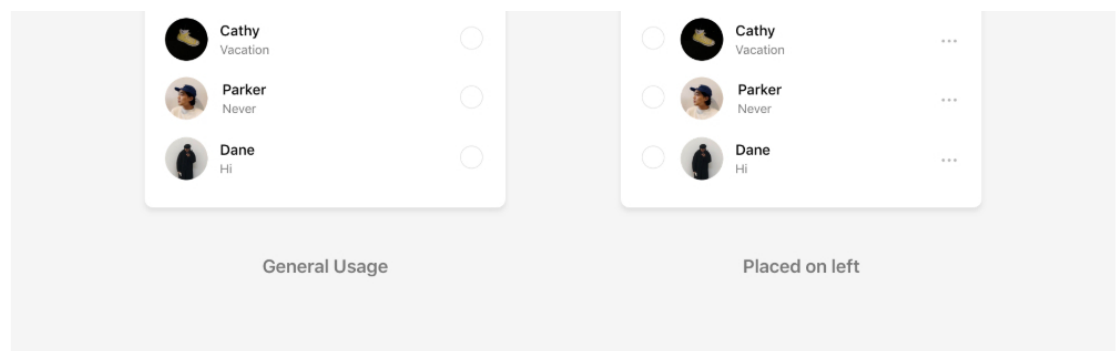

It might be difficult for users to distinguish if it is a single choice or multiple choice without default selection as an example.

Usage

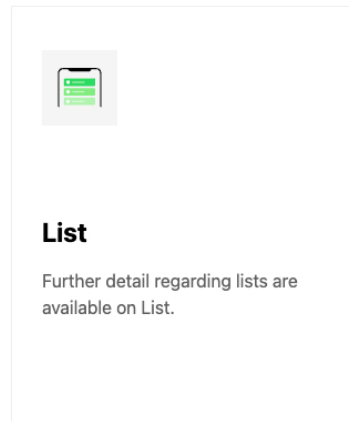

The radio button is used in the following manner.

List usage

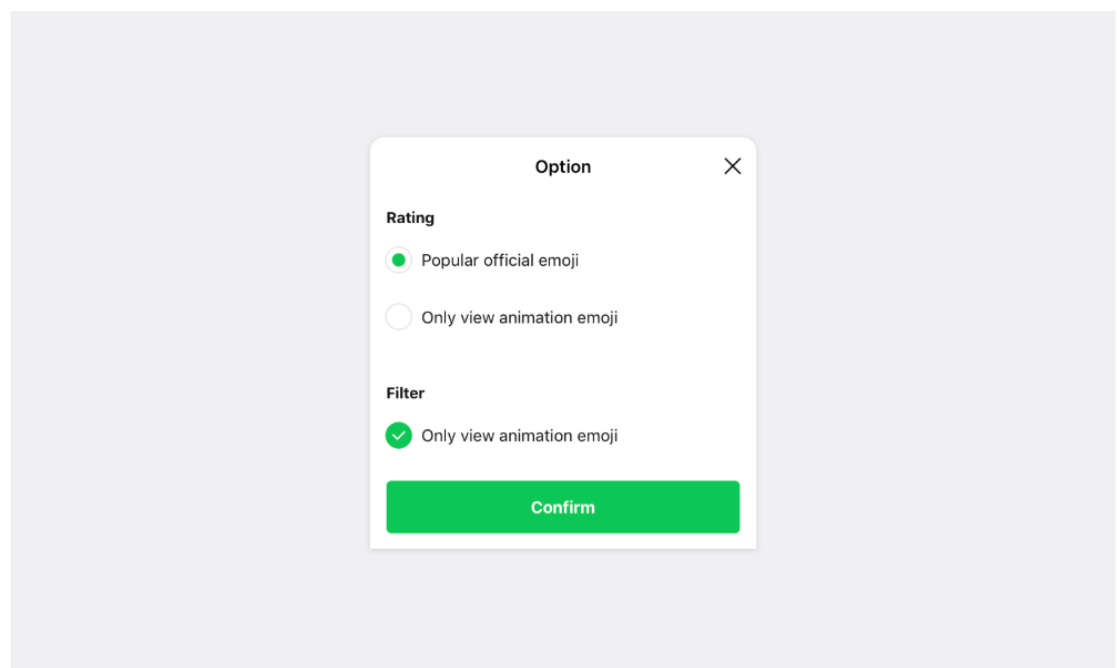

Place it on the far right side of the screen in a vertical list.

List

Further detail regarding lists are available on List.

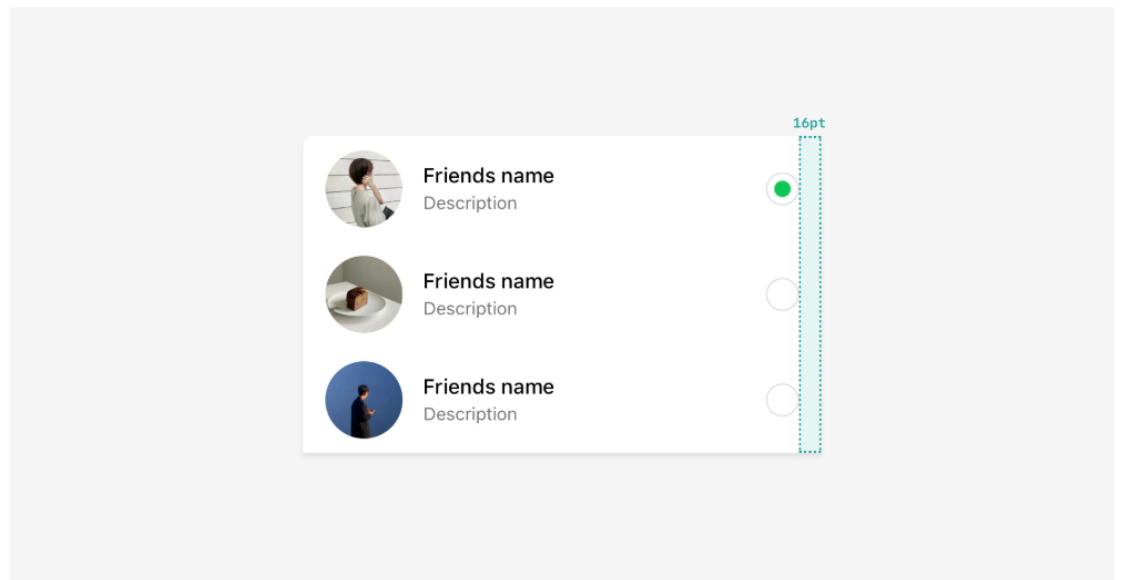

Bottom Sheet usage

Used for selecting options in Bottom Sheet.

Placement

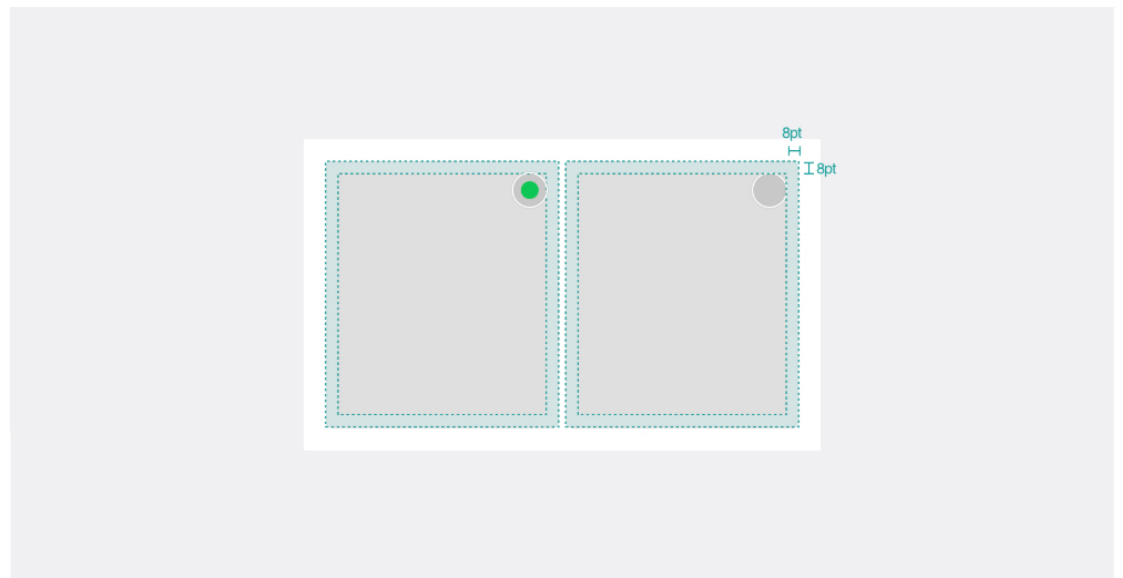

On The List

Request design QA

Place the list on the far right side of the list content area with a 16pt margin. Because the bottom margin is not included in the component, design QA is required.

On The Contents

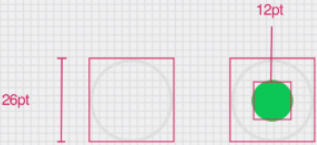

Request design QA

If the image, etc., is placed on top of the content, it can be placed on the top right with an 8pt margin. Because the bottom margin is not included in the component, design QA is required.
