Rainbow Color

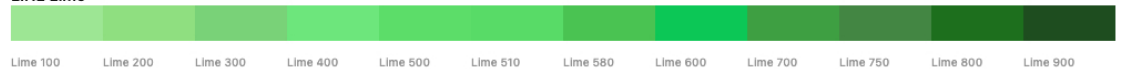

Rainbow color is used for additional UI elements, such as banner images and Timeline Story UI, that do not directly affect the brand experience but can be used with various colors. Therefore, use it differently from the primary color used in the main components of the LINE app. We encourage you to use colors that are within guidelines as much as possible, but you can create and use new colors as needed. But you may not adjust the transparency of any color.

LINE Colors

Choose from the colors in the LINE Colors in all UI elements in the LINE app. You cannot adjust the transparency for all colors other than the transparent mono colors. You can use LINE Colors that are not included in the primary colors in additional UI elements that do not directly affect the brand experience of the LINE app. For example, use those colors in the UI and banner images in a Timeline Story where you can use various tones.

In family services, you can choose brand colors even if they are not included in the LINE Colors. Create a new set of the primary colors from the LINE Colors and brand colors or inherit and use the primary colors of the LINE app.
