Select

The basis of selection is to select a desired item from a list to complete an action. Selection consists of the following steps:

Good Selection UX provides users with clarity of information and recognition of select-able items, so that user can easily identify and perform tasks.

Therefore, it is recommended to **clearly distinguish the selected item from the task**.

These guidelines describe how to effectively provide selection UX in LINE.

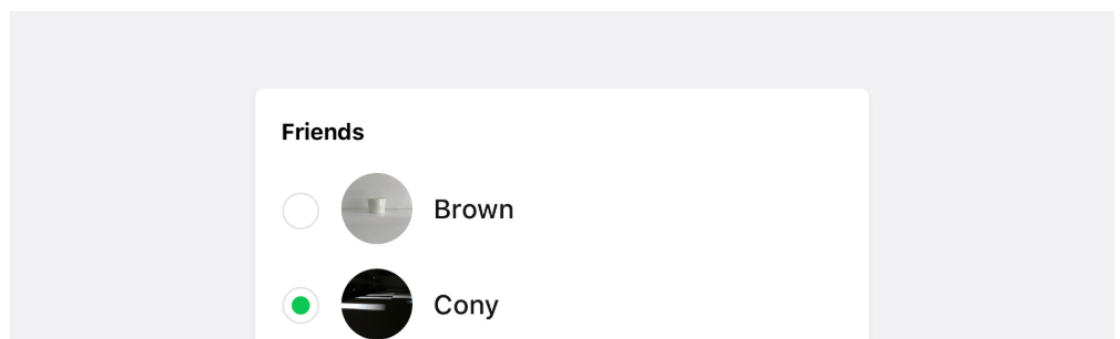

How to provide selection?

Selection can be classified into two types.

Types	Single select	Multi select
Number of selections	1	1 or more
Selected item edit area	No edit area	Edit area Check and edit selection necessary
Selection controls	Radio button	Check button Numbered button Selected item order necessary

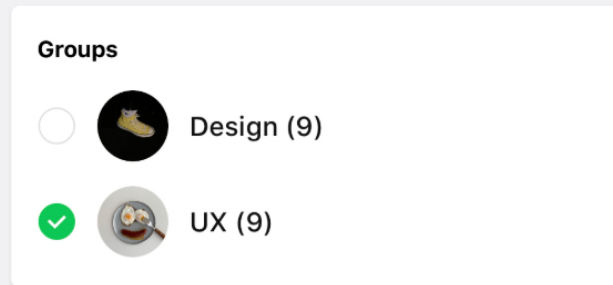

Single selection

A single list of select-able items with the same qualities, such as a friend list. The list item selected by the user is displayed with a radio button.

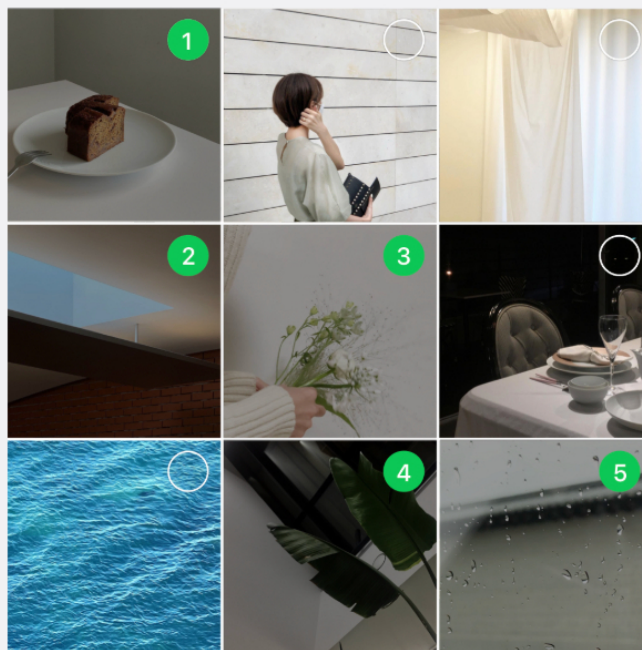

Multi selection

To be used when the selection of one or more items with the same qualities is required. Typically, the user selects multiple list items by using the Check button.

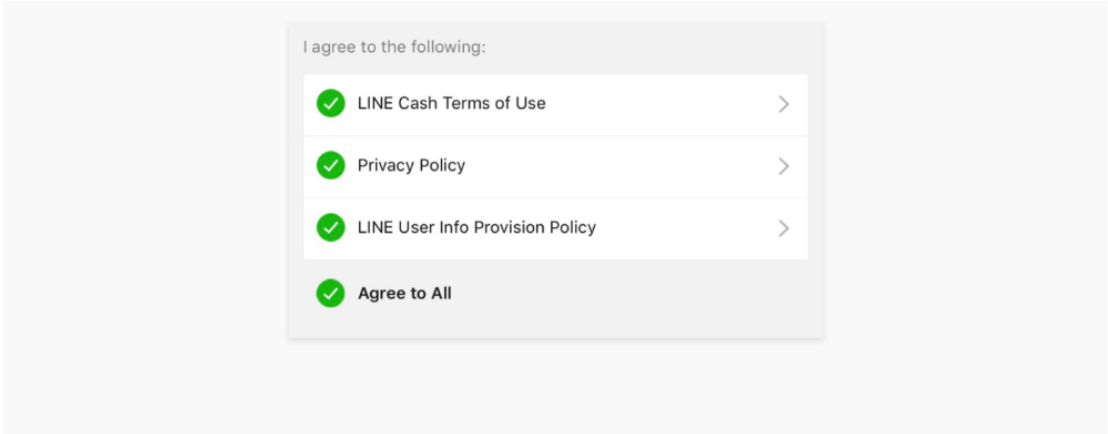

Use the Numbered button when the order of the list is required, such as when sending images to a chat room. The Numbered button displays the order of the items selected.

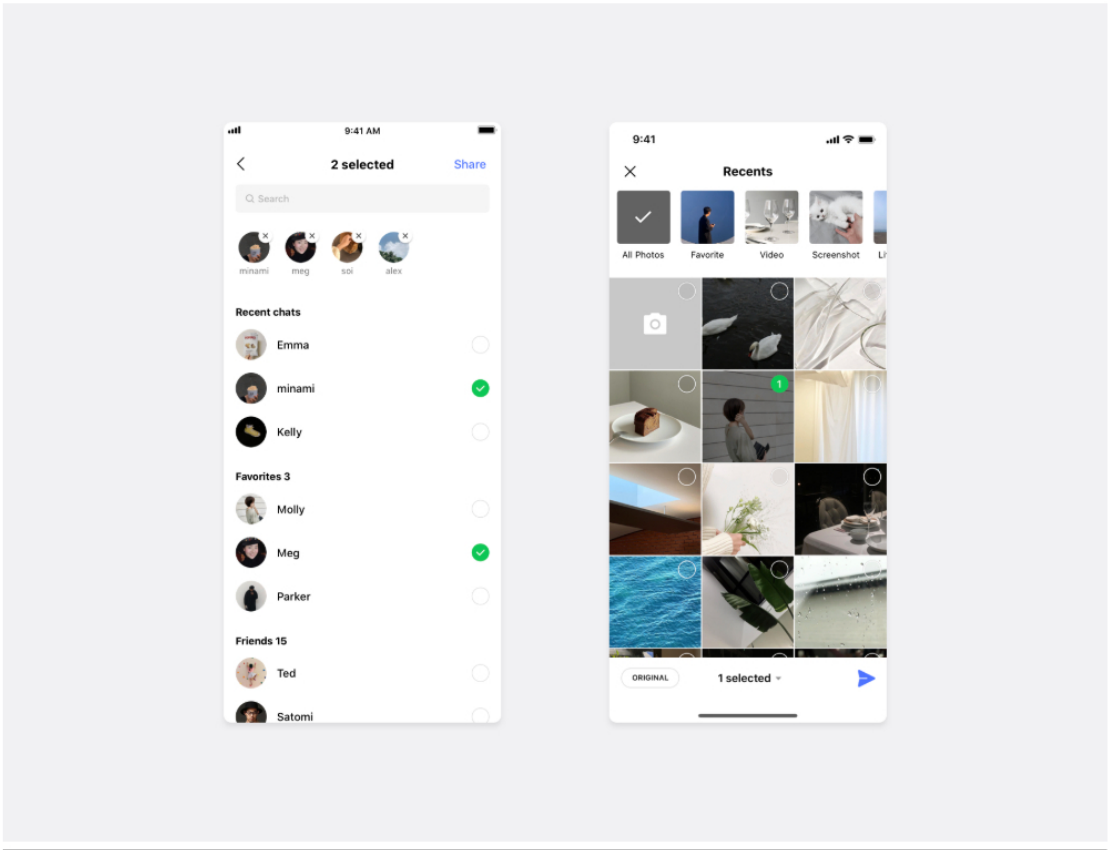

Selecting all items

To be used to provide the user with a convenient method of selecting all list items at once.

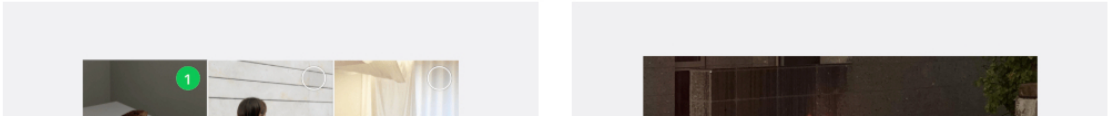

Editable selected items

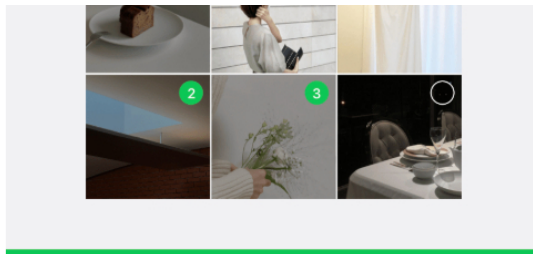

Provide when the user needs to confirm selected item or needs the ability to edit.
The edit area is not displayed until the item is selected.
When the user selects an item, the edit area is displayed with a list of selected items.
If the user selects an additional item, an animation should be used so that the user can recognize the additional item in the edit area.

How to display number of selected items

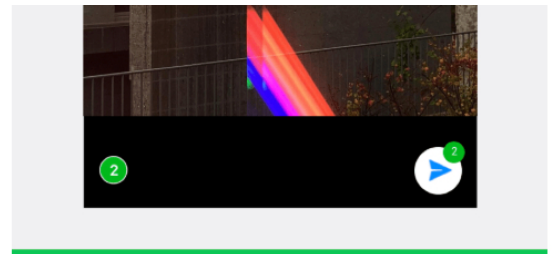

When a user selects an item, it is important to separate the selection number from the call to action to communicate effectively.

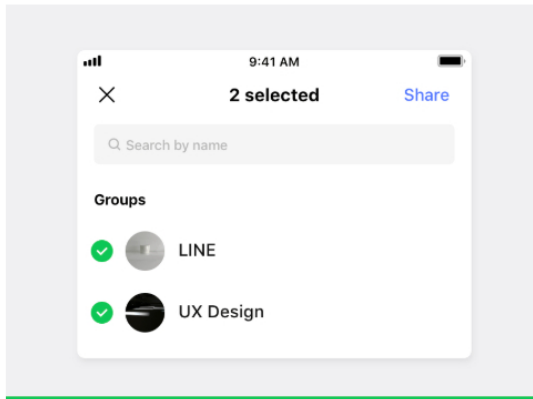

Do

Display the selection order in the Grid view for multiple photo selections.

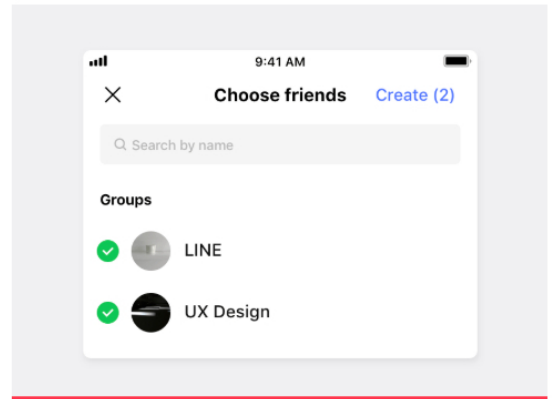

Do

The order of pictures selected is displayed on the bottom left of the viewer, and the number selected on the call to action button as a badge. Task and selection information are not provided in the same visual hierarchy.

Do

The items selected by the user is displayed as a number in the title and the call to action displayed in the area to the right of the navigation.

Don't

When placing a component, don't provide the same visual hierarchy of information as the number of items selected next to the call to action button.
