Slider

Used for places where users must select a value for a specific range. Adjust the slider until you find the desired value, because changes are applied instantly.

Anatomy

1. Background area

Indicates the value of the range that can be moved by a user. You can provide a number or an icon indicating the selected value.

2. Track

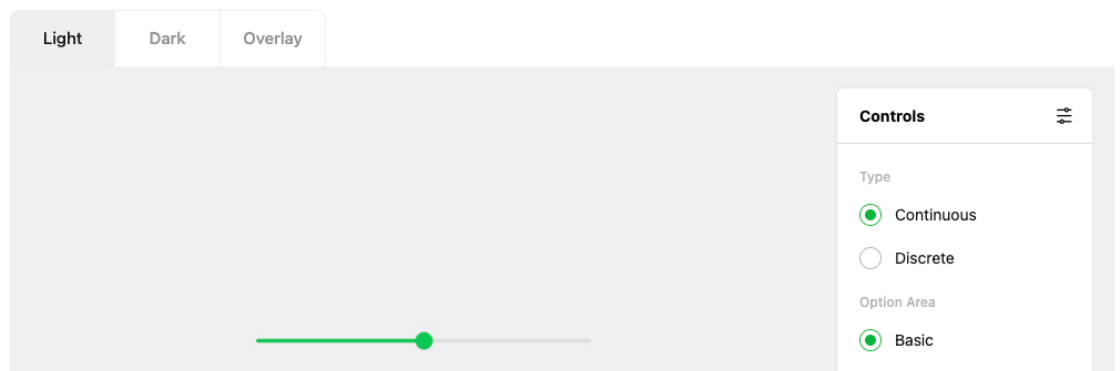

Displays the range that can be selected by a user. It displays the smallest value on the left and the largest value on the right.

3. Thumb

This is an indicator that users can select to adjust the value.

Types

Based on the usability of the slider, the component type will be different.

- ☐ Icon
- ☐ Number(Text)

Continuous

- * This is a type for users to directly select a value within a specific range.
- * A different color will be filled on the left side of the track.

Discrete

- * This is a type where the defined value is selected if a specific point is defined and a user drags closer to this point.
- * The user is alerted with a vibration after moving to a specific point.
- * The track will not be filled with a different color.

States

Enabled

Used for an enabled slider.

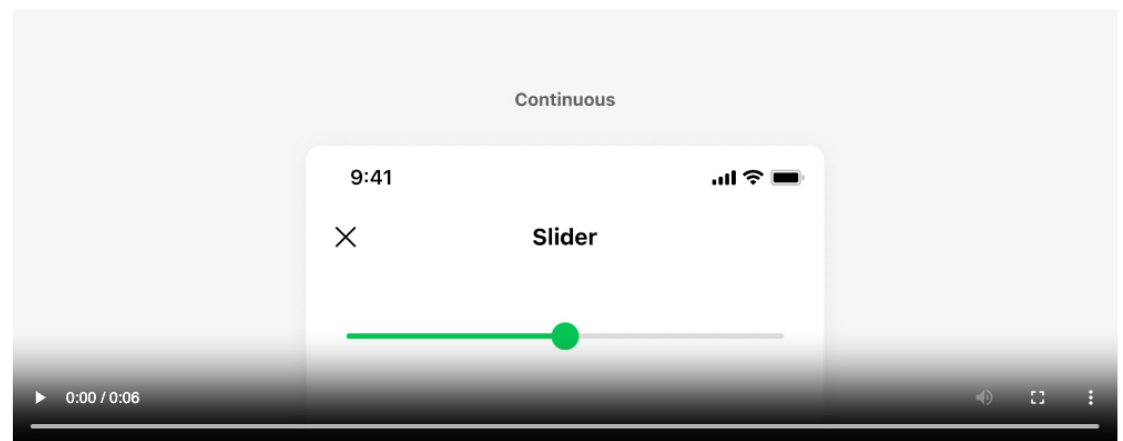

Disabled

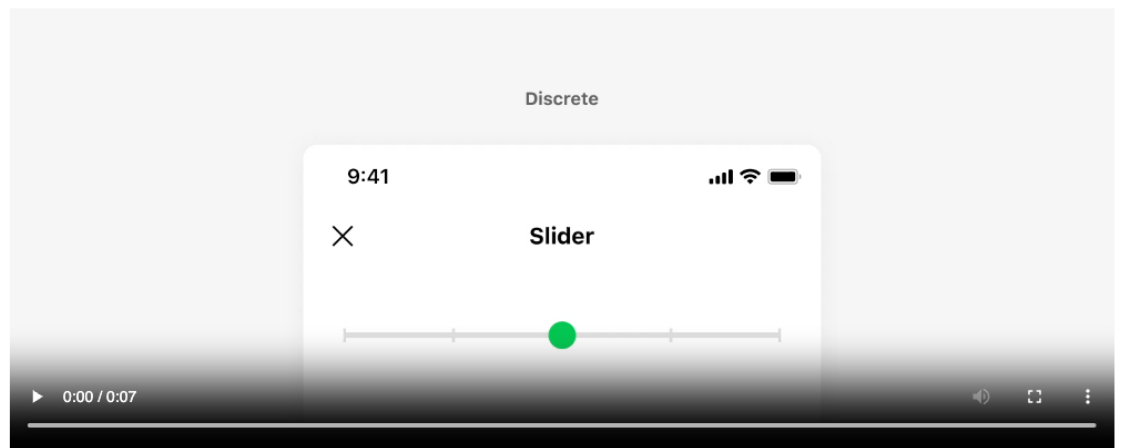

This is an unavailable state.

Interaction

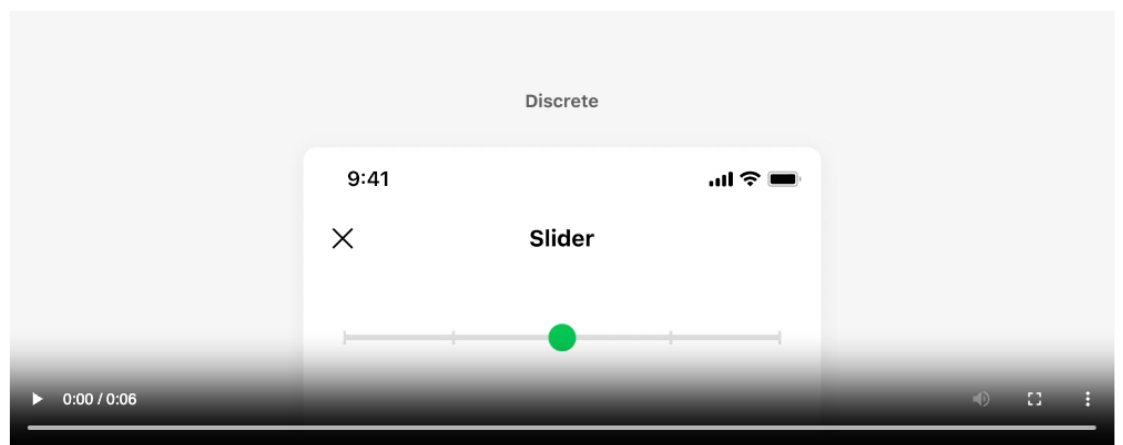

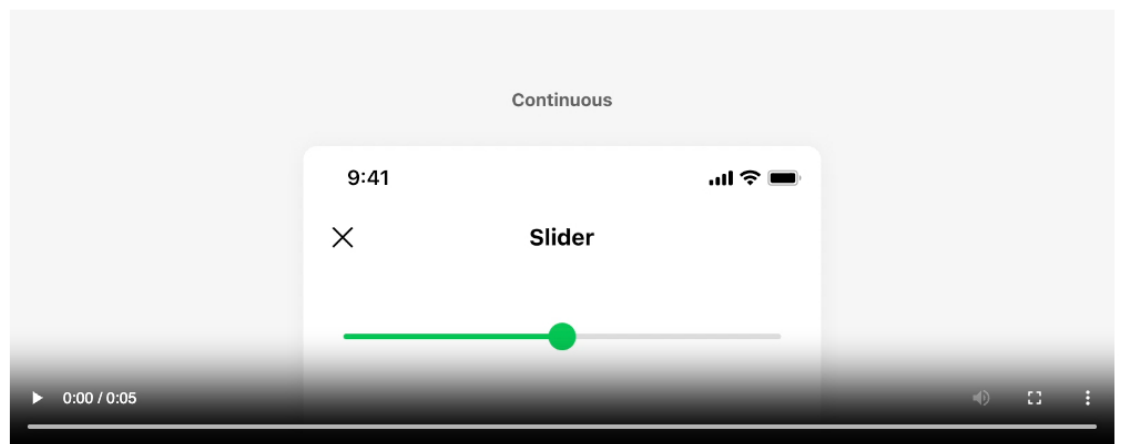

Drag & Drop

- You can set the slider value using Drag & Drop.
- The value is determined with the coordinates of the last drop.

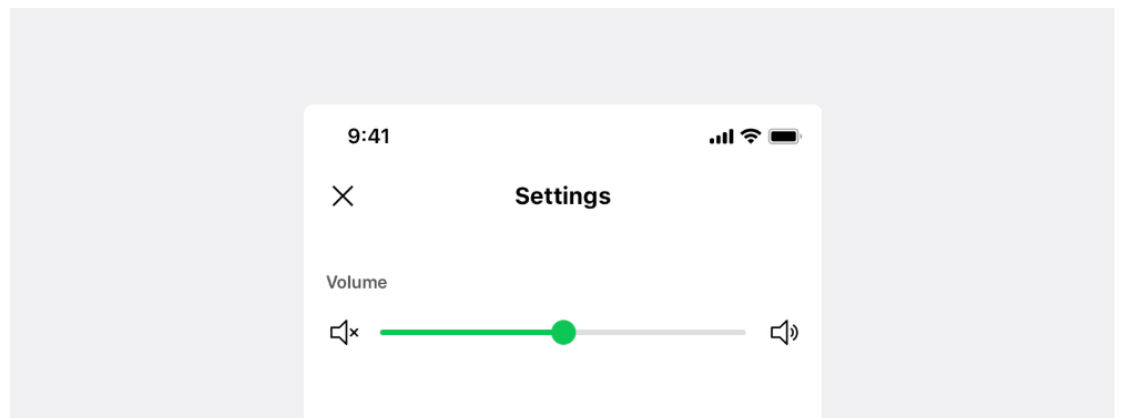

Tab & Jump

- You can set the slider value using Tap & Jump.
- The value is determined using the coordinates of the first tap.

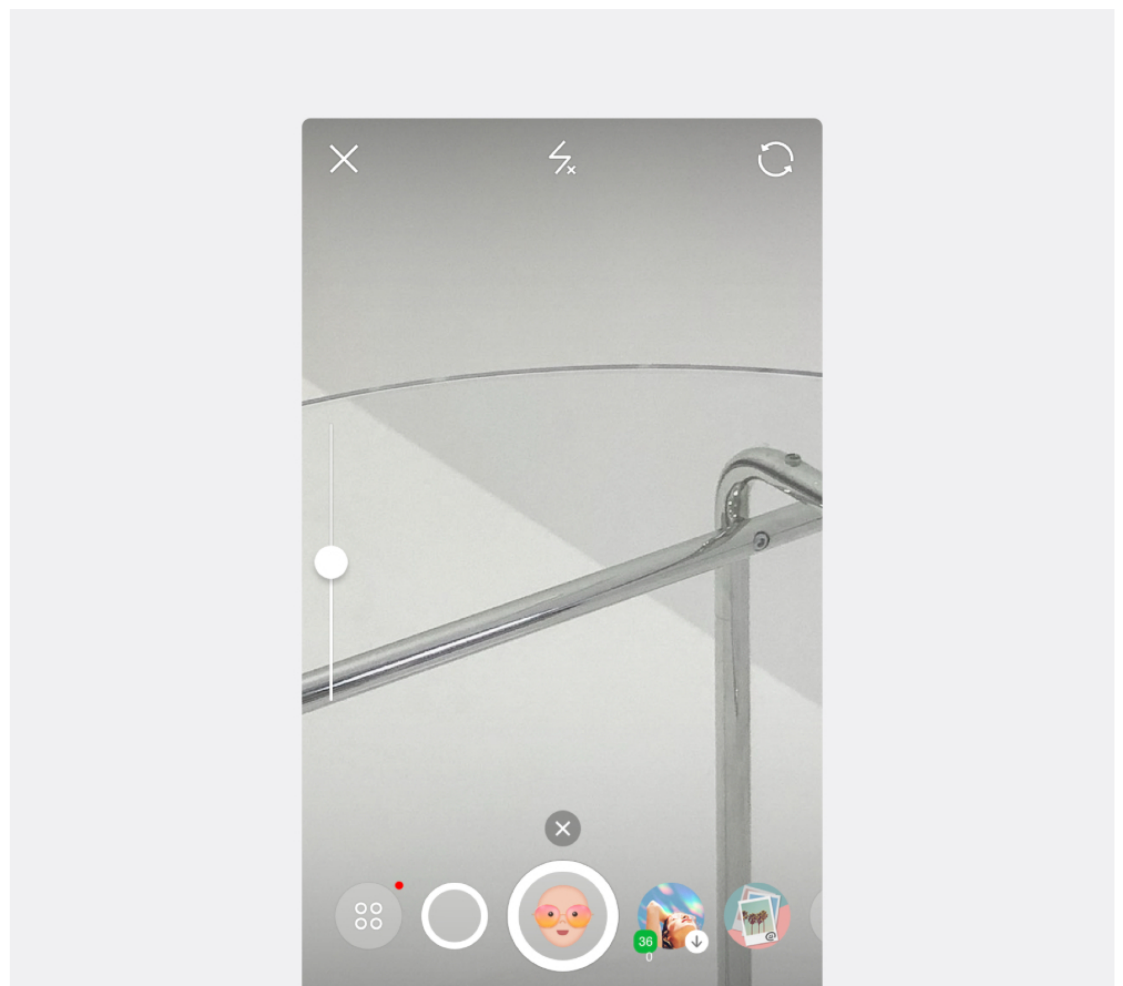

Usage

Settings

Used when one must select one among the values of many ranges, such as volume, font, size, brightness, etc.

Camera

Used for adjusting the settings, such as application of image filter in a camera. (Vertical Usage)
