Spinner

A spinner is used when current status of the running process and remaining time until completion are not precisely known. The spinner will disappear once the ongoing process is complete.

Anatomy

1.Circular indicator

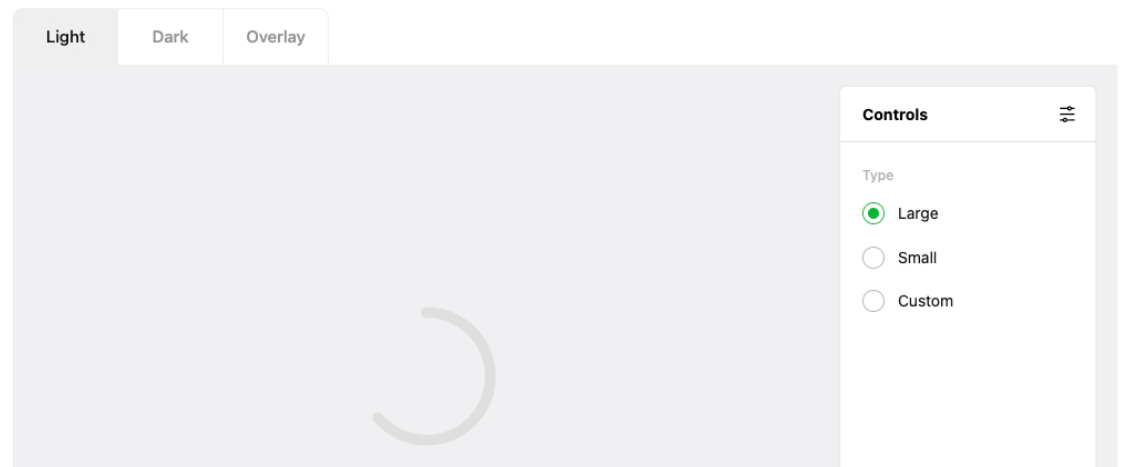

This is an indicator that moves along the round path.

2.Invisible track

This is the path of the indicator. It might not actually be visible.

Types

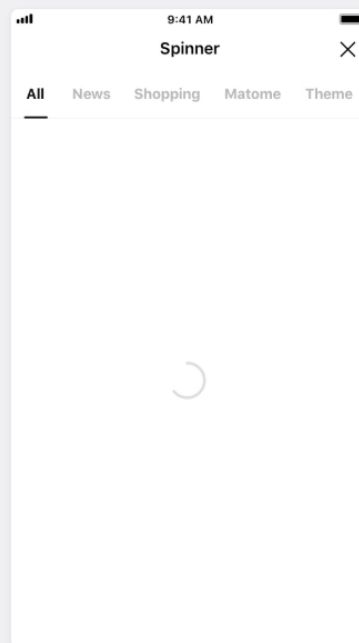

Spinner type and UX Rule are classified according to the use case.

- A spinner is a circle animation that turns clockwise.
- A spinner repeats movement without stopping from its initial exposure until it disappears.
- A small size is generally used when placing it inside a dialog component.
- It can be customized according to the design guide if used inside another small component or the size smaller than the small type must be used.

Usage

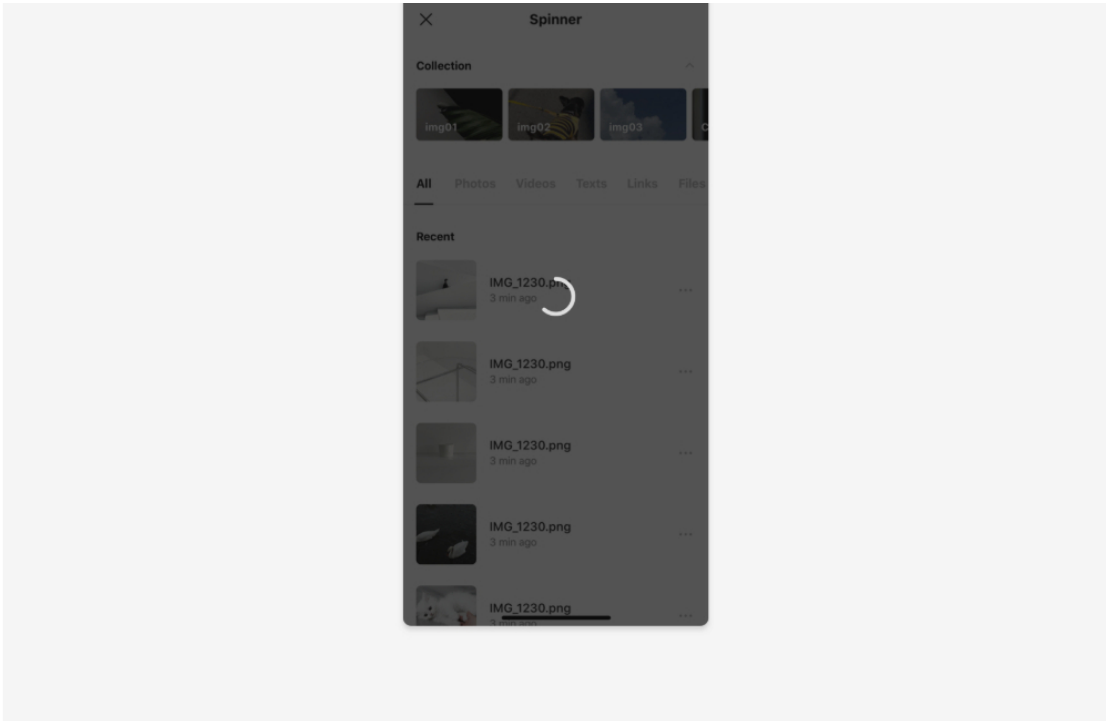

Spinner Only

Use Large type. Exposed at the center of module.

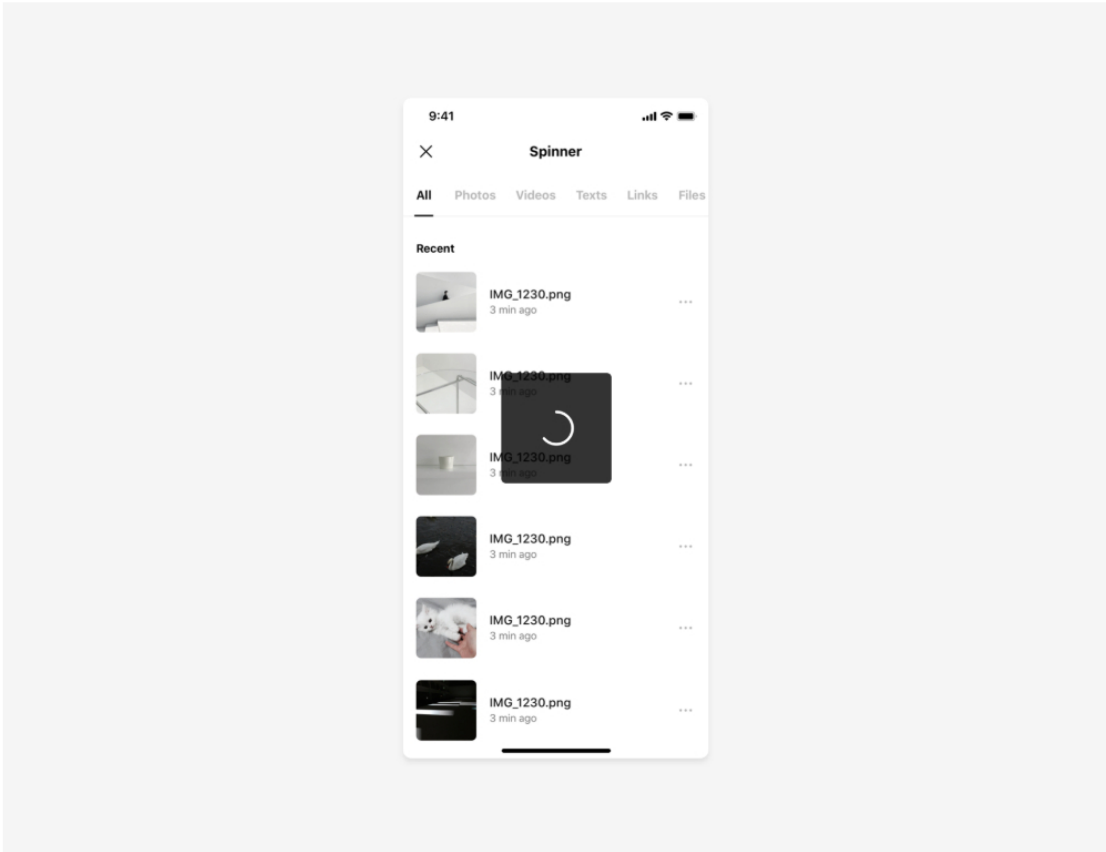

Spinner + Dimmed

Expose at the center of dimmed area.

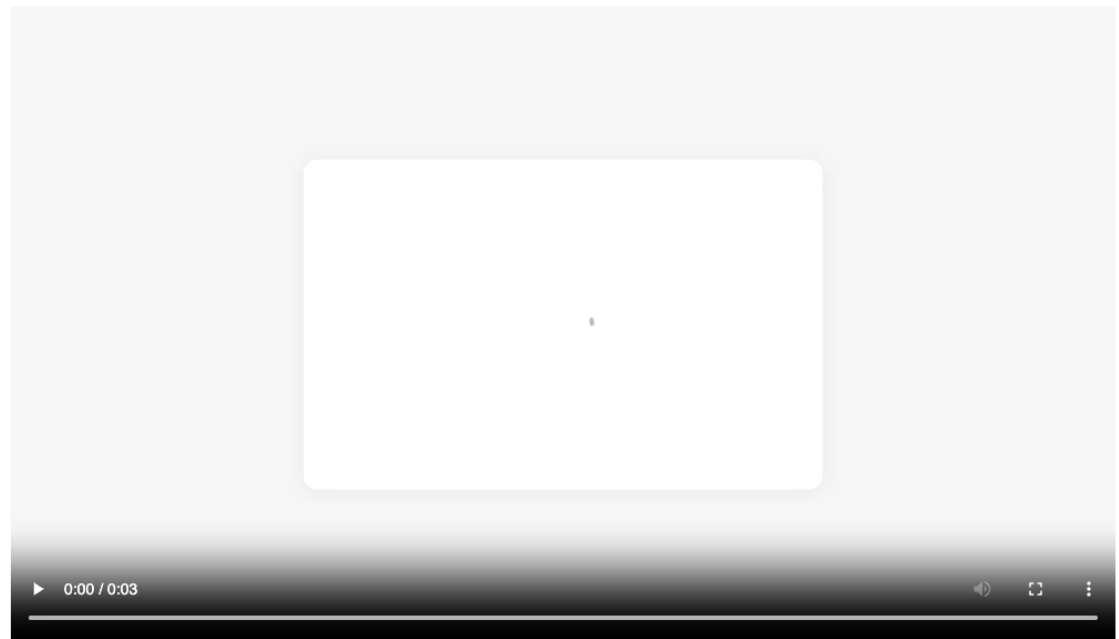

Spinner + Dialog Component

Expose at the center of the dialog component.

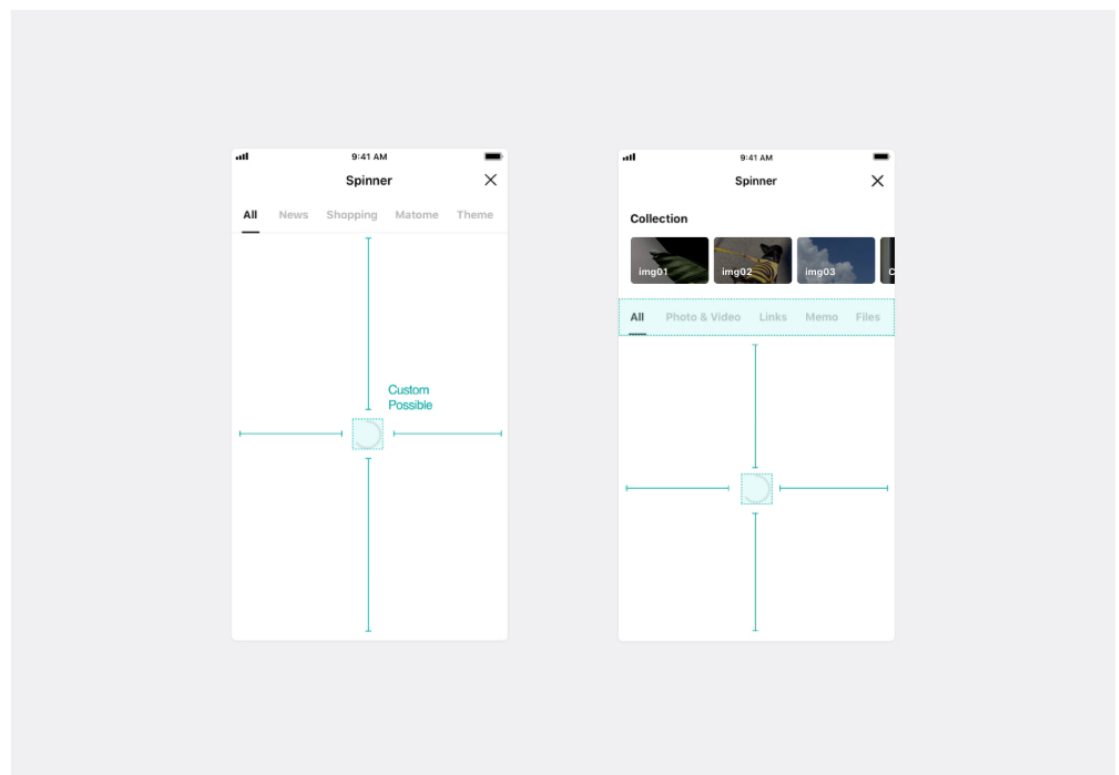

Interaction

Interaction

Provide 30x30 spinners only. Implement with animation code.

Placement & Layout

Place at the center of the area module where the spinner is exposed by default.
