Tooltip

A tooltip is a component that is used to provide additional information. Large and Small sizes are available, and each size has different component options.

Anatomy

- 1. Container
- 2. Tooltip Text
- 3. Arrow (Optional)
- 4. Close Button (Optional)
- 5. Primary Action Button (Optional)
- 6. Secondary Button (Optional)

Element Patterns and Types

Size	L	S
Close Button	True	False
Primary Action Button	True	False
Secondary Button	True	False

Size

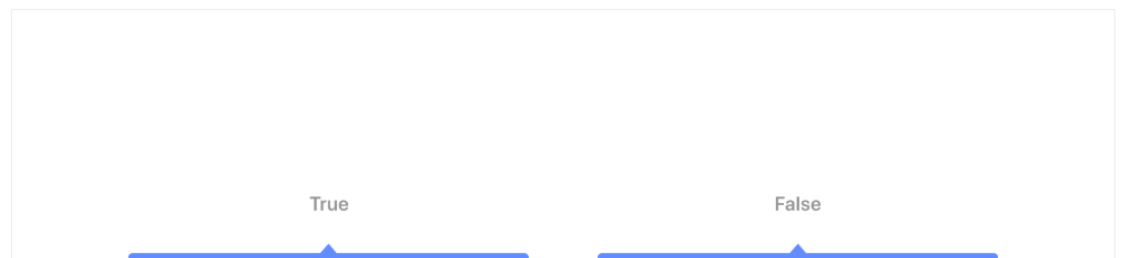

Large and Small sizes are provided. The primary and secondary buttons can be used only in large tooltips. Users can freely adjust the size of large tooltips. The width of small tooltips change according to the text length.

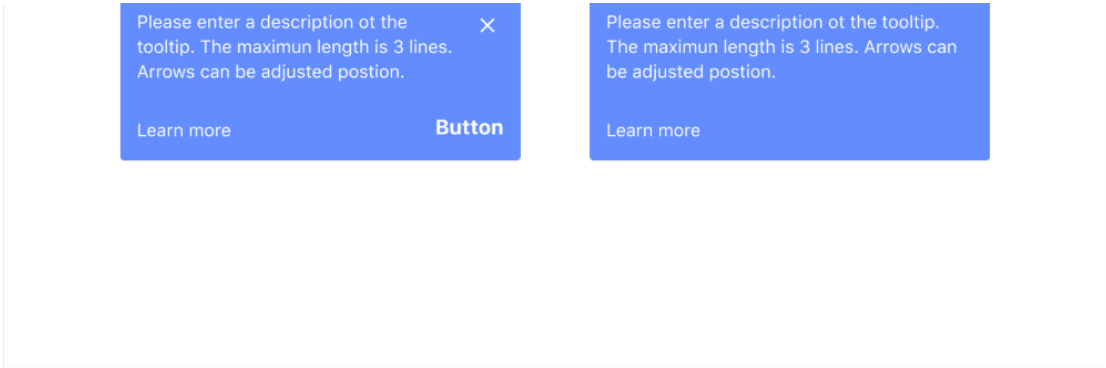

Close Button

You can select whether to provide the close button in the top-right corner. In a large tooltip, removing the button expands the text area to the button area. When the close button is not provided, users can click an area other than the tooltip to close the tooltip.

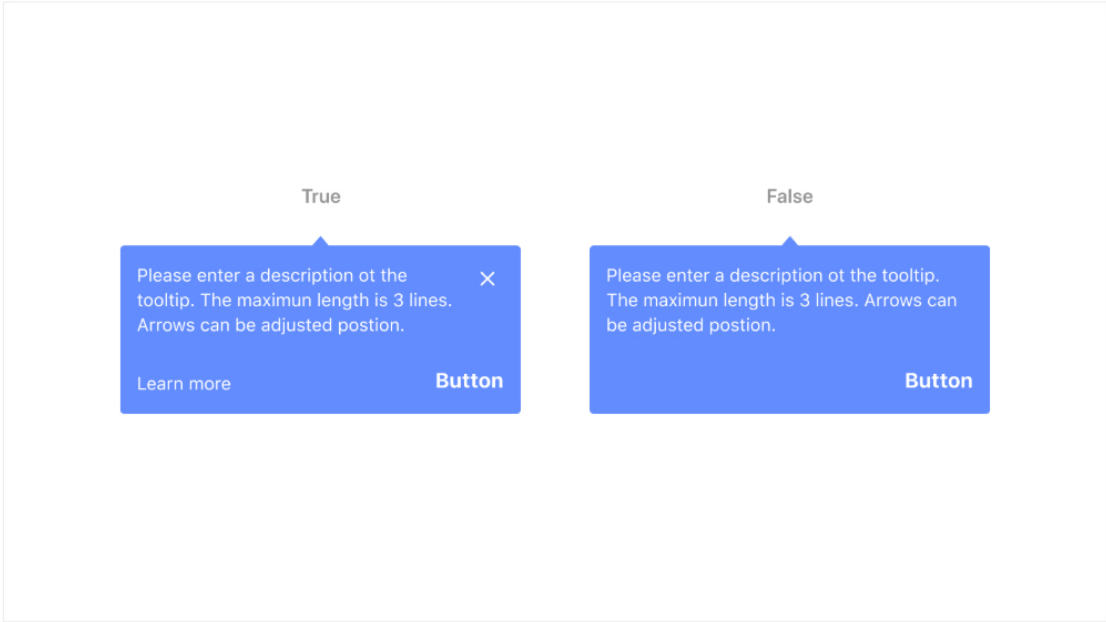

Primary Action Button

You can select whether to use action buttons. Action buttons may not be provided unless emphasis on the selection of action buttons is required.

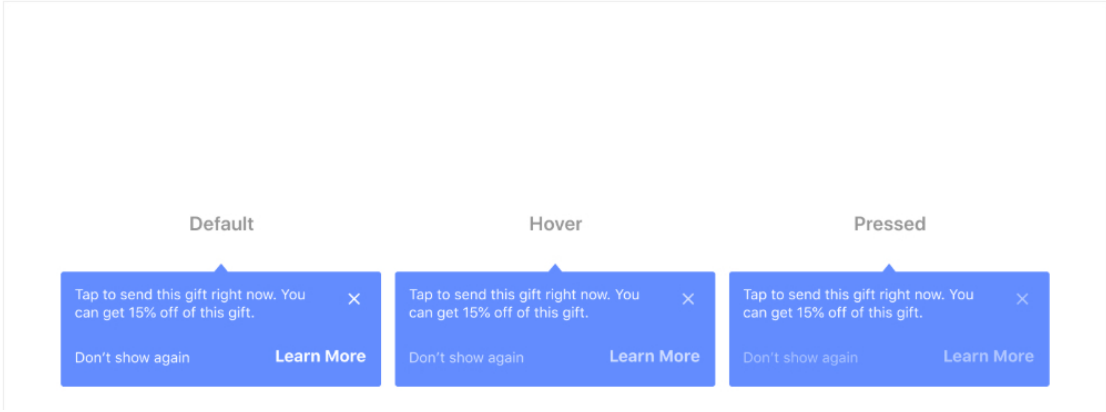

Secondary Button

Secondary buttons have lower priority in tooltips and they allow users to access useful content. Secondary buttons may not be provided unless there are actions to emphasize and additional information to provide.

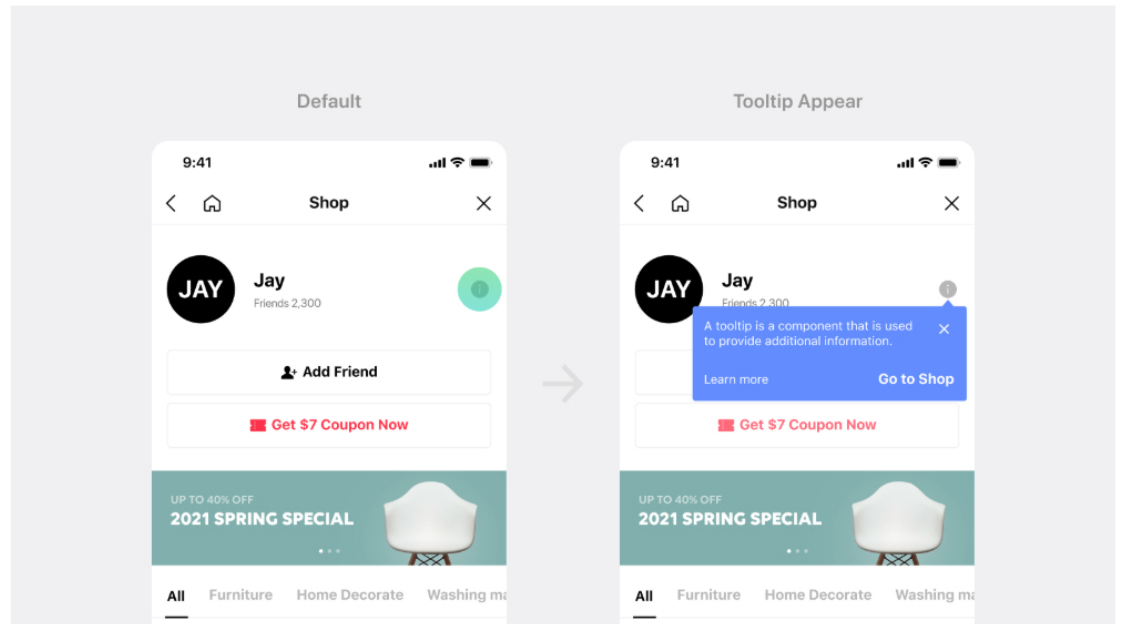

Behavior

Interaction States

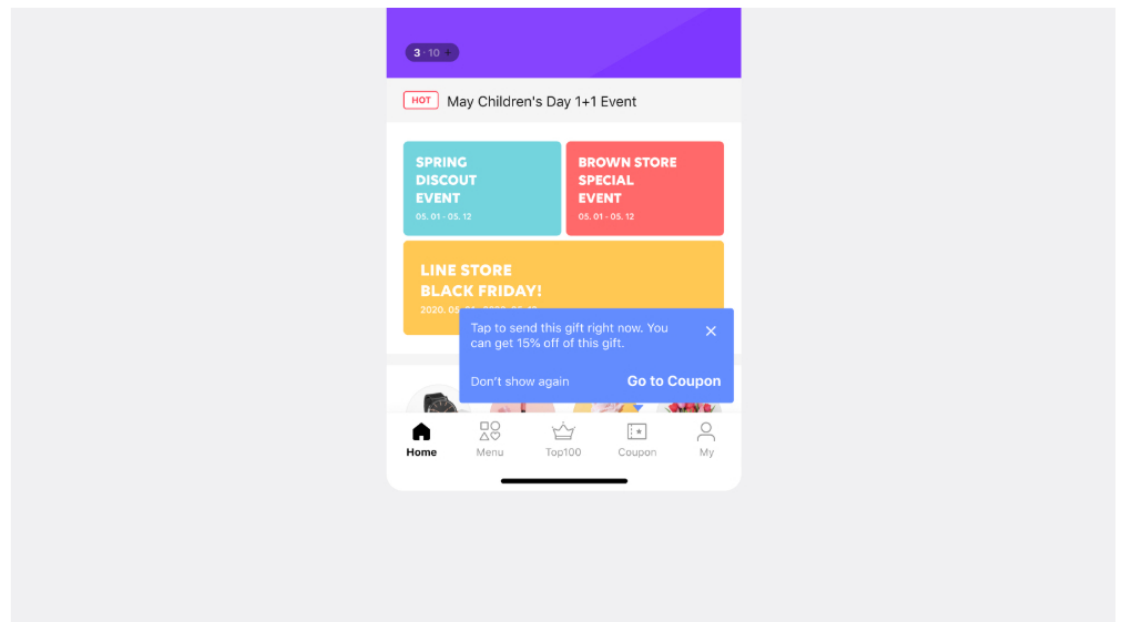

Only the button areas are selectable and the Hover and Pressed states are provided.

Appear

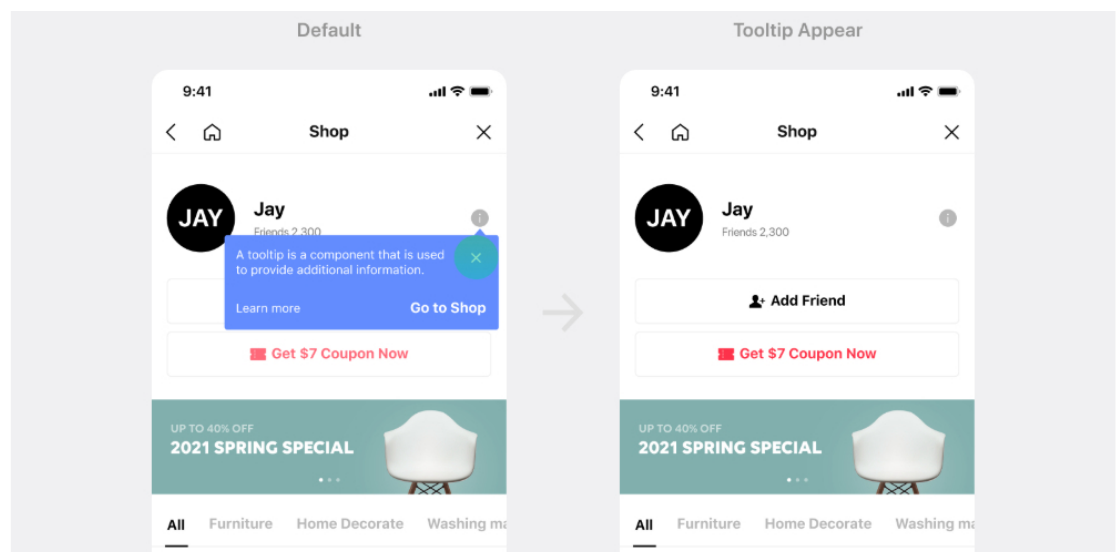

You can select specific triggers, such as buttons and icons, to provide tooltips in the relevant area.

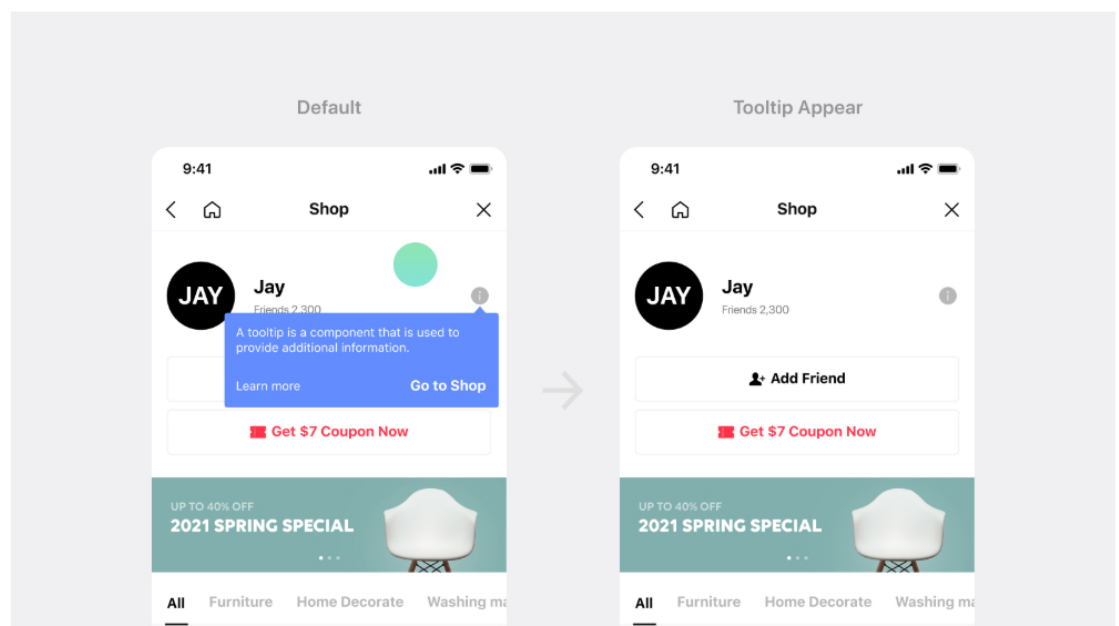

A tooltip may be provided when a page is accessed without a user action.

Dismiss

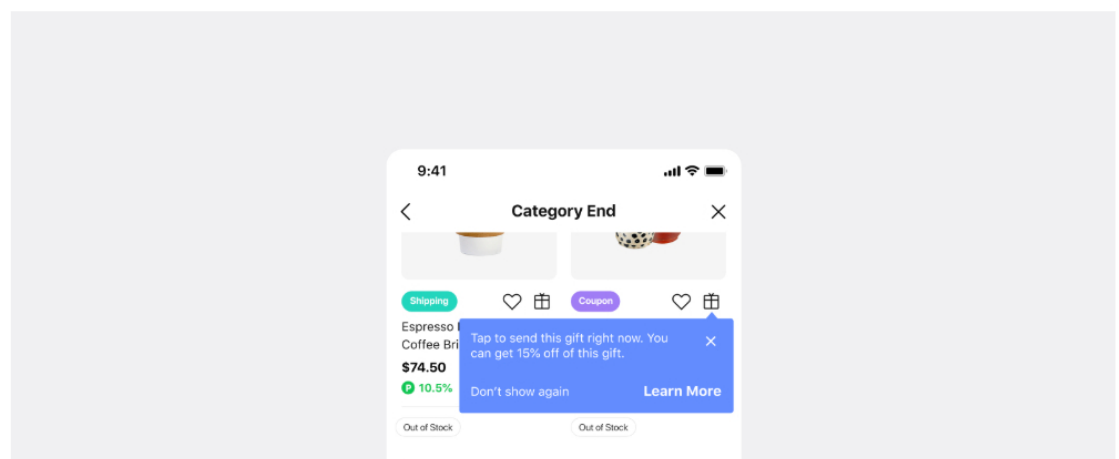

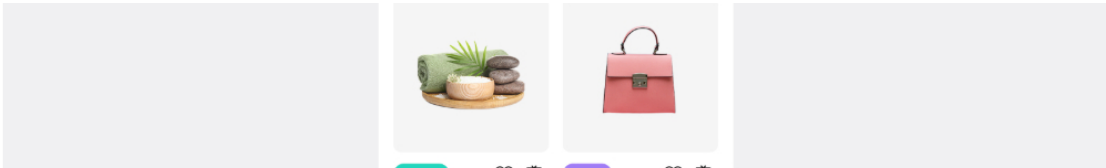

If there is a close button, users can click it to close the tooltip.

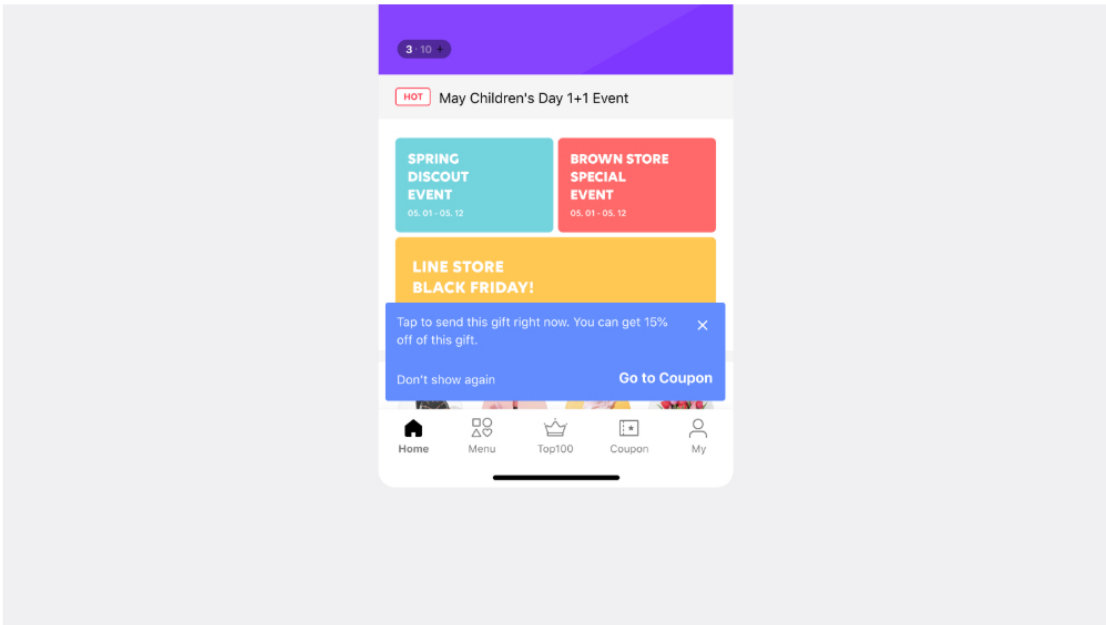

If a close button is not provided, users can click an area outside the tooltip to close it.

Usage

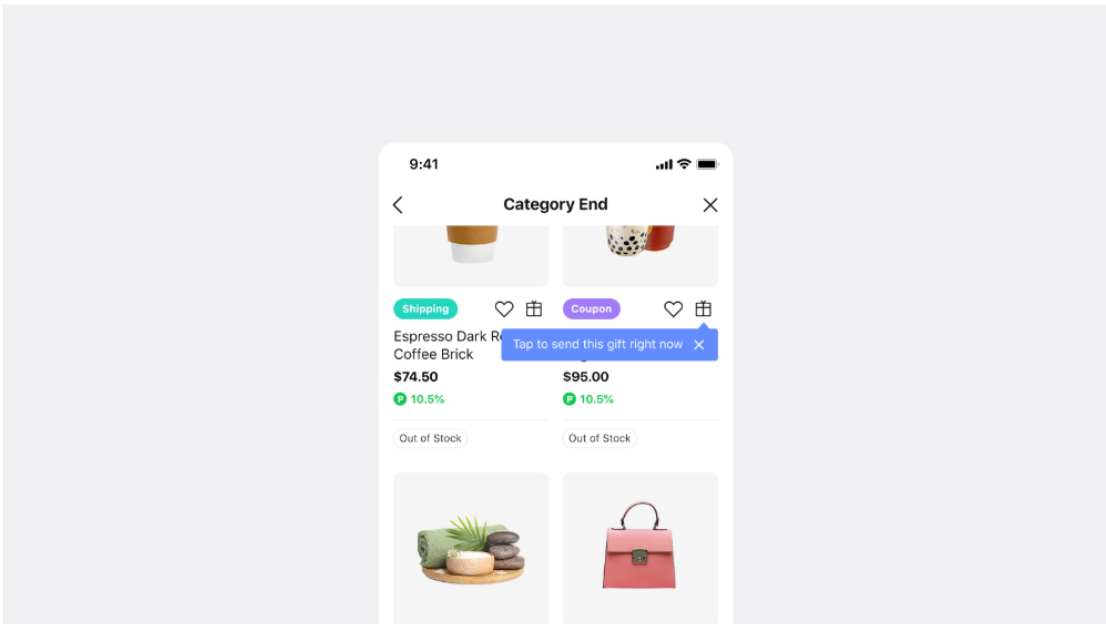

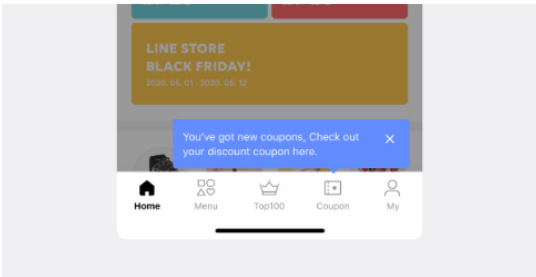

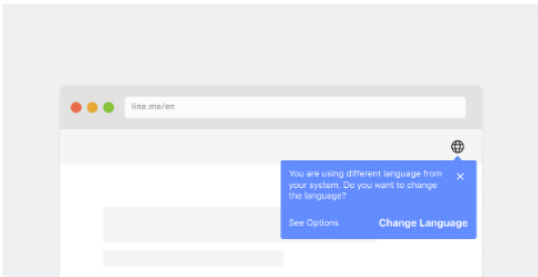

You can use this option to provide a description of a specific feature or promotional information.

In a large tooltip, you can expand the tooltip to fullscreen, excluding the minimum margins (8 each for the left and right).

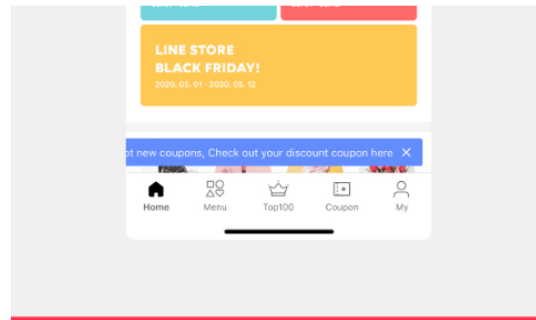

Small tooltips may be used to provide brief information about specific elements.

Caution

Users who cannot click or tap cannot access the tooltip buttons.
Buttons in a tooltip must also be provided outside the tooltip.
Do not include important actions in a tooltip.

Don't

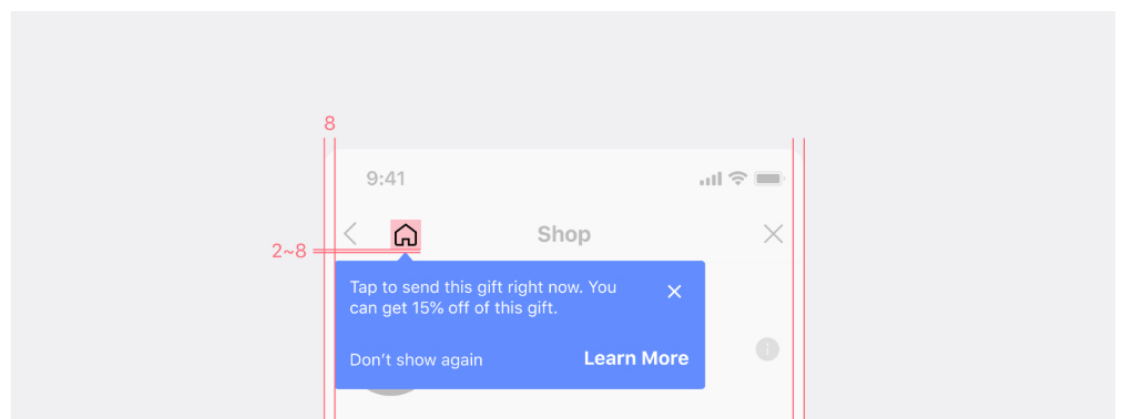

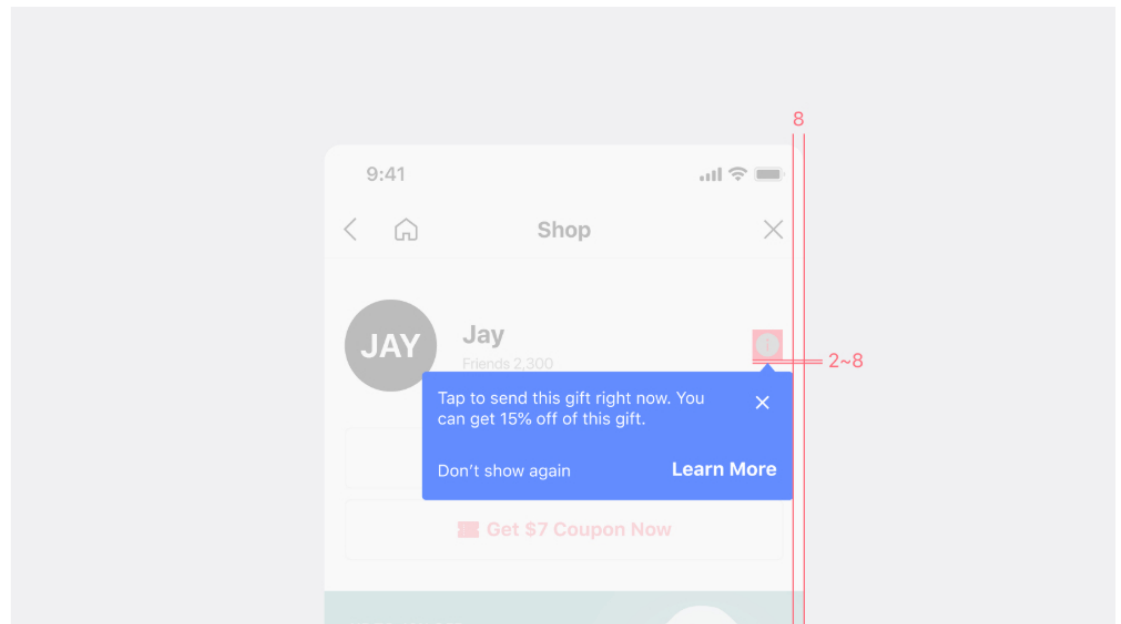

Do not use a small tooltip if the text will be long.
Consider using a large tooltip instead.

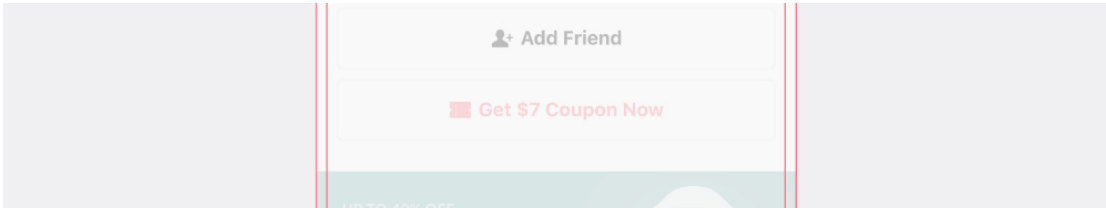

Caution

It is recommended to avoid providing tooltips in the dimmed area of the background unless it is necessary to emphasize the tooltip.

Design Specs

Placement

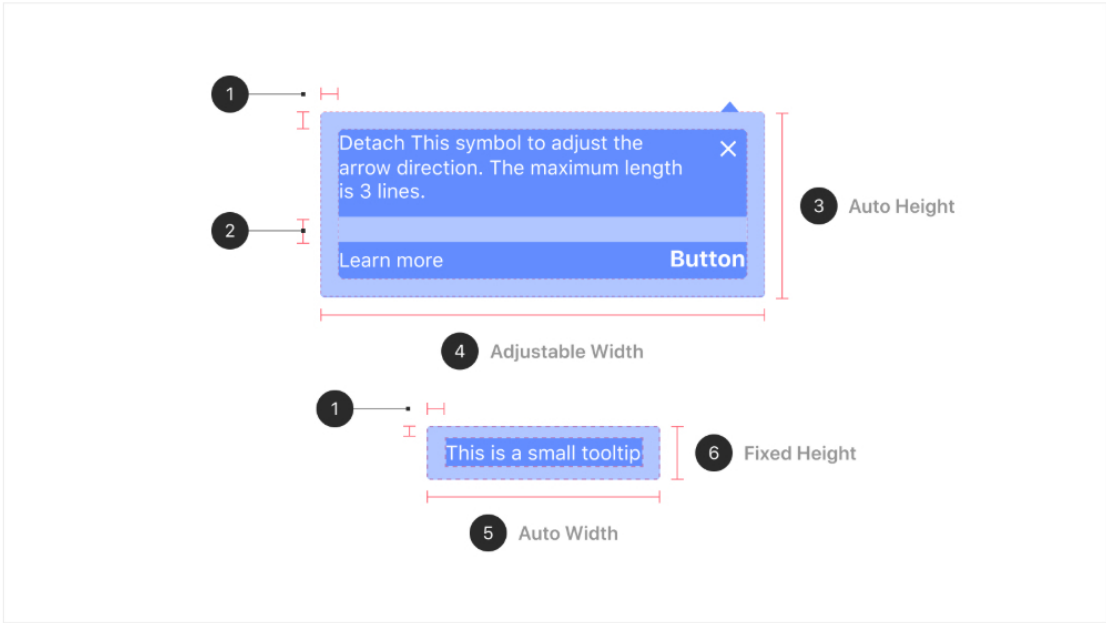

Place tooltips at least 8 pixels away from the starting and ending edges of the screen. Also, provide tooltips 2 to 8 pixels away from the elements that are explained by the tooltips.

Arrows may be used in all areas except for the top, bottom, left, and right radius areas. In the library, arrows are provided separately from tooltips. You can group the elements after adding them.

Resizing

Value	Description
1 Padding	A fixed value that is maintained regardless of the component size.
2 Margin Between Text and Button Area	A fixed value that is maintained regardless of the component size.

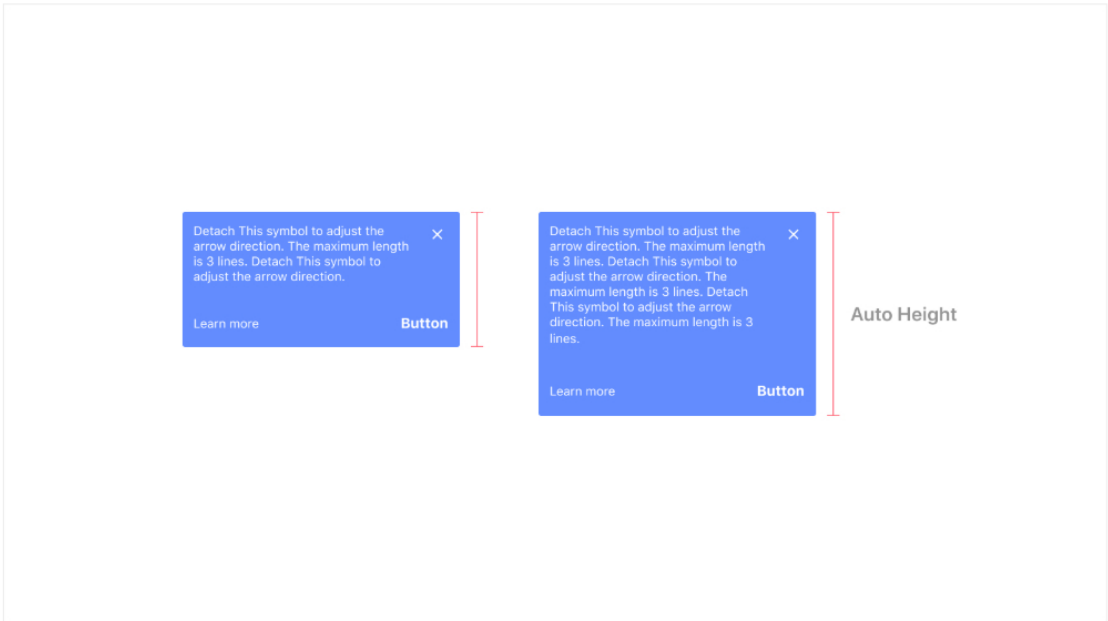

3	Auto Height	Changes according to the text length and the presence of button areas.
4	Adjustable Width	Users can freely change the value.
5	Auto Width	The width is adjusted according to the text length.
6	Fixed Height	The height of a small tooltip is fixed and line breaks are not allowed.

Example 1. Stretch The Width

Users can adjust the width. The number of lines in a text changes according to the set width.

Example 2. Auto Height

The height increases as the text becomes longer and the width stays fixed. There is no limitation to the length but it is recommended to keep the number of rows to less than three.
