Typography

LINE Typography enables an efficient design and development group tasks by selecting the system font for each OS. The typography, applied by considering the defined type, scale, and color, classifies the content's level of importance, and it improves the product's user experience by adjusting the balance of the whole text.

Type Usage

The defined scale is 'recommended'. As designating the type scale can limit the degree of design freedom, suggest the font size and the thickness type but allow designers to use it by freely combining them. However, a size smaller than 12 point is not recommended.

Style	Weight	Size
Heading 1	Heavy	24
Heading 2	Bold	17
Heading 3	Bold	14
Heading 4	Regular	13
Title 1	Bold	23
Title 2	SemiBold, Bold	19
Title 3	Medium, Semibold	16
Title 4	Mdeium, Semibold	15
Title 5	Medium, Semibold	14
Body 1	Regular	16
Body 2	Regular	14
Body 3	Regular	13
Body 4	Regular	12

Type Weight

LDSM uses the each OS's system font. The supported thickness types vary depending on each country's fonts. iOS supports all displayed thicknesses starting from iOS version 13.

Type Scale

You can also configure hierarchies within components in addition to the default hierarchy on the screen by using the defined scale.

Heading

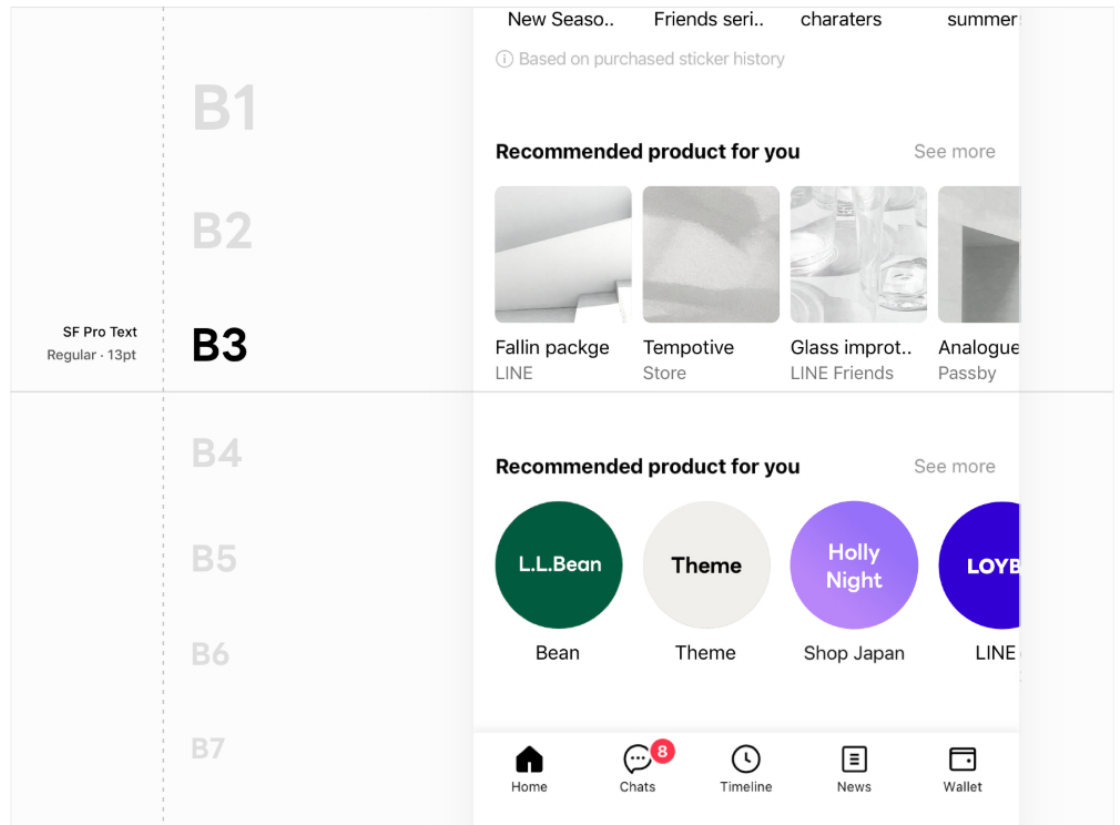

Headings are used to deliver important information quickly as the largest text on the screen.

Body

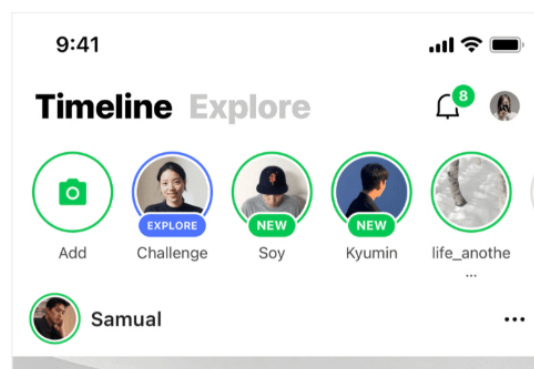

The body is provided in four different sizes for the fonts used for the body text and what is normally used for the line text.

Language Consideration

LINE is provided in English, Japanese, Korean, Chinese, and Thai. There are cases of using two or more content in the same UI when multilingual content is displayed. The lengths of words or sentences may vary significantly depending on the language. Precaution is required when using Japanese and Thai because they can become longer than English.
